some restrictions aren't worth the paper they are written on. if there are multiple violations of restrictions in the neighborhood, then do what ever you want. If you are sued by the neighborhood assocaiation, you can counter sue for selective enforcement.
Personally, I live in a restricted area, but there are no restrictions on my property. I bought it before the developer filed the convents with the county. Therefore I have a 60 foot tower in the back yard with a 9 element 40-10 beam on it.

Really, Jay. After all these years you are still bearing a
grudge.

Not that anyone I consort with is "anti-code", we just like to
maintain some perspective. We assign importances to things. Some of us
are concerned about the survival of amateur radio in the next century,
not the last century.

We now return you to bashing Radio Shack for being open late
and selling to anyone who gives them a phone number.

Believe it or not, there is a professional building at the junction of two major highways in Lexington that allegedly has just such a story associated with it.

The owner of the private house which stood on the site was turned down for years when he tried to get the property rezoned so he could put up the office building. His response was to flood his large lawn which was quite visible from one of the highways with every conceivable sort of lawn gee-gaw. This must have lasted for 20 years, until things finally changed and the permit for the office building was approved.

I am considering the purchase of a new Ford Explorer, but not if HF, VHF, or UHF transmitting from the vehicle causes problems with the engine electronics.

Can anyone who has transmitted from a 93 Explorer tell me their experiences?

Posting here or via email is fine.

Thanks and 73's

Terry Brown, N7DVA

speaking of out of touch, now all the spanish speaking amateurs in the SFV
are gang members. Boy, you learn something new everyday.

And hey, I lived in an area called Tortilla Flats, aka TxF by it's youth-
group for 15 years and despite the shootings and assorted other nonsense
not once did ANY of them spray my property.

Of course, if you're ignorant, it's easy to take the actions of a few and
assign the blame to an entire group. (Hint it's called stereotyping)

I know I am going to catch heat for this but I feel I must share this with the original poster [re: buying hilltop property next to an unknown type of radio tower]:

A couple of years ago the FCC and EPA did a joint study to investigate why there was a `statiscally significant' [newspaper's choice of words] increase in cancer in people living near a residentially-located broadcast tower; three AM stations were transmitting from that tower (I can't recall the power each station was running). Without actually saying that the RF was to blame, the tower was removed.

If anyone would like a copy of the newspaper article, email me, and I'll look it up in our library.

> Don't call me a raving xenophobe, I'm playing by the rules and expect the
> others to do likewise !

Heh heh heh, I love it when someone assumes I don't know what I'm talking about. The situation you're talking about is due to an enforcement problem. That is in turn due to a general shortage of money in every agency from the people that work out of the FCC offices down to the guys in front of the local 7-11 with cardboard signs. With the limited resources of the FCC, they deal with what they have established as priorities. 10 meters is not at the top of their list. Most of the public radio service is not at the top of their list. And blaming the ARRL for a lack of enforcement is about as out of touch as you can get and still tell if the sun is up. This is almost as humorous as one of our locals that accused the ARRL of selling off 220 to the commercial interests in exchange for codeless licensing from the FCC.

Also, since you seem to wish to be associated with a cartoon character, "When I want your opinion, I'll give it to you." Mok

The spectrum is there for all of us to use. Not some of us to horde for occasional personal use. The days of everyone having a private repeater (and the repeater coordination groups to perpetuate this) are over.

Rather than foam at the mouth about the 'situation' out in the SFV, how about getting a new radio. One that allows you to change frequencies.

How can it be an unknown type, for long? Go look, and figure out what kind of antennas are on it, ask a local radio tech, etc. etc. No sense passing up a perfectly good hilltop site coz you don't know what's on it. I would probably pass if it were a dozen high power FMs or TVs, but most hilltop towers are used for two-way transmissions that are (a) rather low power and (b) sporadic.

I would be very interested to hear of this, please post! I would hope that the newspaper intended to say that they would inquire _if_ there were a statistically significant increase in cancer among such people. This has been postulated, and some weak correlations drawn; some stronger correlations may be forthcoming in current research. Mostly the concern is high electromagnetic fields in the few tens of Hz to few hundred kHz range (specifically, 60 Hz power line fields) that have been researched. I have not seen any real studies about RF fields and cancer, but it still seems plausible and prudent to avoid excess exposure. Wonder whether there's any increase in the Sutro Heights neighborhood of San Francisco, directly beneath the some-megawatts combined power of the TV's and FM's on that tower.

I too have read newspaper reports of all manner of medical problems around all kinds of facilities. My first thoughts have always been very mixed, knowing the usual levels of scientific knowledge and impartial curiosity associated with many newspapers, yet appreciating that if there is a genuine problem, how the news would break.

If there are any similar clusters in places not associated with some obvious suspect, they are much less newsworthy. In determining if the reporting of clusters around broadcast masts, high voltage lines or a nuclear facility, is significant you need to know if there are clusters NOT associated with such places.

We do not know whether or not there are risks from strong radio signals, or from power lines, causing medical problems, but there are other tangible reasons for avoiding some places. Power lines do occasionally break, dirty insulators spoil radio reception. Nuclear facilities around the world have had accidents, some areas are on natural radioactive rock and are exposed to Radon gas.

Take care with reports of problems, if you avoid some area, do you move into some area with a comparable problem, just not reported?

I personally prefer to be away from tall structures, power lines, nuclear whatnots and high crime areas. My reasons are visible ones.

Cheers
David GM4ZNX

2004. Software for Circuit Cellar Ink articles

I am looking for the software for an article that appeared in
the September Issue of the journal
Circuit Cellar Ink, The Computer Applications Journal.

The article is "Neural Network Basics" by Dwayne Phillips,
Sept. 1993, issue #38, p.36-43.
The software should be available on The Circuit Cellar BBS, but I
have no modem access and I am wondering if anybody knows if this
BBS is mirrored somewhere on an Internet machine?

> of cats as his wife runs a cattery for the local cats protection league
> - he recruits some of the local radio amateurs to help with the
> unloading of kitty litter as he buys several tons at a time.

And I get complaints - and sometimes compliments - about the purring
noises which get transmitted on the local chatter channel. My
favourite episode was when one of our siamese queens was "on-call" -
ready to mate. If you have never heard the call of a randy she-cat,
it would make the mythical banshees hang up their vocal cords. The aim
is to attract any (and every) male in the area. Of course, if they
happen to call when I am chatting on two metres that area can be
rather extensive. One amateur reported that his tom cat was showing an
unusual interest in his rig...

> I too think Morris dancers are a bit namby-pamby, but the pubs by the
> village greens often keep Theakston's Old Peculier, and one sometimes
> has to make sacrifices in a good cause....

One warning: If, while enjoying your ale, you see somebody dancing
towards you with a sheep's bladder on the end of a stick, run away.
Very quickly. This is not a joke!

[description of simplified version of dwile thwonking elided]

> Dwile thwonking, like Morris dancing, is quite properly entirely
> voluntary.

Yup. I only dance when I want to. You wouldn't want to pay to watch it
though.

> The only government regulations relate to assault and
> grievious bodily harm, rather like rugby.

That's correct. To clear up any confusion I should point out that the
assault and GBH are _compulsory_.

Notes of Interest.

In last week's Notes the QSL route for HL9KU should have been via N7NMR, not N7NM.

Gibralter, ZB2. ZB2/SM4DHF will be active 22-28 September and will be in the CQ World Wide RTTY Contest 25th and 26th. QSL via home call.

Mellish Reef, VK9M. With about only 9 days to go all is on schedule for this 19-28 Sept. operation. The group should arrive in Australia and depart no later than the 15th. RTTY is included. QSL via VK4CRR.

Eritera. The DXAC voted 16 to 0 to reinstate Eritrea to the DXCC Countries List. The vote for starting dates were May 24, 1993, 9, May 24 1991, 6, and April 27, 1991, 1. The ballots have been forwarded to the ARRL Awards Committee for their action.

China, BT2000BJ. From Beijing they ask for your patience on the QSLs because of heavy school schedule. Hope to have them all out by the end of September.

For next week's bulletin, please direct your Notes and Bandpass to Jules, W2JGR @ CE3GDN.#STGO.CHL.SA

Remember, DX don't sleep.

2008. List of ham gear prices wanted

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-10 11:44:08 UTC
From: tucker@gtl.georgiatech-metz.FR.georgiatech-metz.FR
Message-ID: <9309101144.AA03286@gtl.georgiatech-metz.fr.georgiatech-metz.fr>
Source record: 276534

I apologize for doing this, but I don't have any way to access old notes
from rec.radio.amateur.misc.

Could someone please mail me the list of ham gear prices that was posted
here a few weeks ago? Someone had compiled a list of actual sales of
radios and other gear, along with their prices. I'm looking at selling
a couple things and need to know what a fair price is.

Thanks a lot for the help.

Oh dear . . . stop me somebody . . . arrgghh . . . too late . . .

"I must get my VFO stabilized," Tom chirped.

"CQ WWDX", called Tom testily.

"I never work YLs," said Tom dismissively.

"A bit more gain is needed," Tom amplified.

"I never work simplex," Tom repeated.

"We should split the bands according to mode," Tom planned.

"Sorry Dot, I must dash," said Tom, waving continuously.

"I think I need a frequency changer," Tom translated.

"QRO!" shouted Tom.

"qrp," Tom whispered.

"QRS," Tom drawled.

"I like microwave operating," Tom said with great frequency.

"Isn't this against the rules?" asked Tom, cryptically.

"My rig just went bang!", Tom reported.

"I never send cards via the buro", said Tom directly.

"I hate inductors and capacitors," was Tom's reaction.

"This circuit needs more damping," said Tom in ringing tones.

"I enjoy electronics design," said Tom circuitously.

"I hate integrated circuits," said Tom discretely.

"I have replaced my PA tubes," said Tom finally.

"My crossed Yagis seem to be electrically unbalanced," said Tom elliptically.

"I'm looking for ideas for short wave listening," said Tom receptively.

"Something is taking too much current!" said Tom shortly.

"I told you that guy rope wasn't strong enough," snapped Tom.

"More smoothing needed I think," Tom hummed.

"Maybe I'll try EME," Tom reflected.

"You failed the 5wpm test again", said Tom remorselessly.

"I keep all my antennas in the attic," said Tom loftily.

"I've given up sending Morse by hand," Tom expounded.

"I've lost the sked sheet," said Tom listlessly.

"I've added a small capacitor," Tom puffed.

Ok, I'll stop now. pip pip

No but are you really suggesting that there is a useful signal at the
.00000005 V level in there? Then if not, why do I need 90+ dB dynamic
range in my A/D if I have plenty of dynamic range in my processor to
do the algorithm adequately.

Yup, that was the special Internet/Usenet award you were nominated for.
And there have been several EXTRAs that lost their licenses and/or shirts
in their own bids for Lid of the Year since then... 4-land, 2-land, 6-land,
all over the place. Kind of makes me want to stay put at Advanced. :-)

BTW, it wasn't me who nominated you... I pretty much stayed out of that
fracas, except I emailed a minor flame. I didn't post anything.

>and plead 'No lo contendre' claiming it's a "Part of their culture.." like
>the 2 little 15 year old assholes that did several houses on my street!

They've had plenty of time to do that here if they wanted to. I have a friend
who lives on the edge of what he calls "Little Mexico," and he's bitched about
the occasional loud music. No graffiti (that's the correct spelling, I looked
it up) so far. The Hispanic influx started about five years ago here, so they
should have found the hardware stores by now.

Pleading nolo & claiming it's part of their culture shouldn't beat a vandalism
rap. If they want to spray their own property, fine... but street art and the
US justice system are topics best left to another time and newsgroup unless you
can relate them to ham radio somehow.

I'd be even more interested in hearing how 3 AM stations shared the
same tower. That'd be a neat trick. (FM I could believe.)

Source record: 276540

In article <1993Sep9.211215.28147@nntpd2.cxo.dec.com> Steve, AI7W writes

>I haven't run across the different modes before. What do the 'Curtis 'A' and
>'B' modes' do differently.
>(I post this because I suspect I'm not the only one who doesn't know).

The difference between the Curtis A and B mode lies in the last element generated when the paddles are let go when in the iambic mode. In the B mode it generates the opposite element. In the A mode it does not.

For example: When attempting an R on a mode A keyer, you have to make sure that you release the dit paddle last to ensure that the terminating dit of the r is sent. In the B mode you can release them both at the same time and still get an R. Further, in Mode B you can also release the dit paddle last to get an R provided you have already released the dah paddle (so that it is not in the iambic mode). So the bottom line is that Mode B gives you greater flexibility in timing in making characters. Which is why it is pretty much the standard in new equipment from Icom and Kenwood.

This difference is difficult to grasp when reading about it. The best way to understand it is to experiment with Mode A and Mode B keyers. I was so curious that a year ago I bought the Curtis 8044 ABM chip to try the different modes. A keyer built using this chip can be easily switched between Mode A and Mode B. I tried both and then sold the keyer. I just use Mode B now.

BTW, Steve, I have heard you in the pileups more than ones. Best DX.

: Well let's see. Consider this actual car wreck I witnessed
: a few years ago. One of the big ARES-types on our local repeater
: also witnessed it.

: 8:30:00: Wreck happens
: me: <picks up portable cellular phone as I pull over to the side of the
: road and dial 911.>

: 8:30:10
: 911: 911, what is your emergency.
: me: Cellphone, sandy plains and hwy 5. (I learned to do that in case my
: battery or the cell drops out, they can dispatch to the address.)
: There is a 2 car wreck with injuries between a blue car and a pickup
: truck at the intersection of Sandy Plains and Hwy 5. I am looking in
: the car now and see a child passenger with head injuries and the woman
: driver possibly pinned behind the wheel. Driver in the truck is out
: and walking around.
: 911: <dispatches fire, police and extraction team> What is your name.
: me: John De Armond and my cellphone number is xxx-xxxx. I witnessed
: the wreck so if I'm needed, my home phone is xxx-xxxx.
: 911: Thank you. Anything else?
: me: No. Thanks.

: 8:31:00 <click> Call over.
: 8:31:10 I jot the license numbers on the back of my hand and then look
: to see if either car occupant needs emergency first aid.

: 8:35:00 First responders arrive from the fire station a mile away.

: Meanwhile our ARES hero leaps to the call of duty ...

: 8:30:00 Wreck happens
: 8:30:10 Our hero springs into action. He keys over the QSO in progress
: and yells in that frantic voice normally saved for when they
: drop the Big One "Break Break Break", the code that the local ARES
: regards as sacred for emergencies but which everyone else uses
: to join the conversation.
: 8:31:00 Not hearing the break because he was yacking, the current

: talker unkeys. Our hero "break break breaks" again.
: 8:31:05: <next ham in the rotation> "Oh hi guy, howyadoing? yack yack yack
: yack yack. So tell us what exciting's going on"
: 8:33:00 Hero: I have an emergency and need to use the patch.
: 8:33:05 Other guy: Oh OK, go right ahead.
: 8:33:10 Hero: WD4xxx on the patch <tone tone tone tone.>
: 8:33:20 Repeater: Invalid code
: 8:33:30 hero: Try again. <tone tone tone tone.>
: 8:33:40 repeater: <10 seconds of Star Wars sound effects> ring. ring.
: 8:33:50 911: 911, What is your emergency.
: 8:34:00 hero: This is amateur radio operator WD4xxx. Can you copy? O-V-E-R
: 8:34:10 911: <that "oh no, not again" tone> Yes I can copy.
: 8:34:20 hero: I have an emergency to report. O-V-E-R
: 8:34:30 911 <REAL exasperated tone> I'm listening and can copy.
: 8:34:40 hero: There has been an accident at <squawk, bleep, howl (30
: seconds of misc pager, voice and other intermod howls) <click>>
: 8:35:00 First responders arrive but our hero doesn't know that because
: he didn't stop.
: 8:35:10 repeater <robot voice> Emergency call completed. Call duration
: xxxx seconds. Thank you for using WD4xxx repeater. Have a
: nice day. <15 seconds to repeat the same message in Morris>
: 8:35:35 Hero: Damn. Try again. <tone tone tone tone.>
: 8:35:40 repeater: <10 seconds of Star War sound effects> ring. ring.
: 8:36:00 911: 911, what is your emergency
: 8:36:10 hero: This is amateur radio operator WD4xxx. We got cut off.
: Can you copy? O-V-E-R

interesting story. Apparently you could make the cell-phone call because
you had a yagi on your phone? Must have missed that part.

2025. Summary of Comments -- Iambic paddles

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-10 15:12:43 UTC
From: ksampath@magnus.acs.ohio-state.edu
Message-ID: <26q5hb$p9u@charm.magnus.acs.ohio-state.edu>

some time ago, i had asked for usage tips and techniques for iambic
paddles. here is a summary of comments made by various netters....

enjoy.
73
krishna, kb8fav

From: n9ljx@ecn.purdue.edu (Scott A Stembaugh)

The only way to learn how to use paddles is PRACTICE PRACTICE PRACTICE!!!

When I first got some I didn't use them on the air for 2 weeks until I was
comfortable with them. Even then I would practice a few minutes before
getting on. To practice just send both sides of QSO. OR get a newspaper or
magazine and send paragraphs. By doing this you can play with the settings
and spacings on the key to get it just right BEFORE you are on the air.

After sending your call 30 - 40 times in arow it sort of flows off of your
fingers!

>
> thanks for your suggestions. if you have the time, could you "dumb it up"
>even more :-), like whether you squeeze them or tap them gently and whether
>you rest your elbow or not etc?
>

They way I do it is a combination of both. To do a C I don't squeeze
the keys together, but i also don't wait for the dah to finish before
i hit the dit. What is fun (but sounds terrible IMHO) is to send CQ
using the squeeze method. It gives you a good feel for the key and
helps your timing. start out with your keyer slow, abt 10 WPM and
build up from there. That will improve your timing.

As far as arm positioning, do whatever is comfortable. I rest my
forearm on the desk and the key is abt 45 degrees out from center of
my body. I know people who have the key right in front of them. This
is good if you tend to be heavy handed and need to hold the base
still. If I am in unfamilier surroundings this is how I do it until I
get used to the key.

Jusrt play around with it until you are comfortable. that is the most
important thing. Like alot of other things in our hobby, there are
several 'right' ways but few 'wrong' ways. If it works for you then
it is probably right.

From: mohan@tulip.ES.UTOLEDO.edu (Mohan Pakkurti)

I got your mail regarding the technique for using a paddle. There is just one
thing I want to add.

>from: martin.zurn@cen.jrc.it
>call: IK2RMZ
>If you decide to start with the paddle anyway I'ld recommend a double
>paddle. Consider to use ur paddle with the hand that you dont use to
>write. Keep the dots an the left hand side in any case.

I wonder what the reason is for keeping the dits on the left side. It seems
a lot of hams do the same.

From mebly@eng.umd.edu Tue Sep 7 13:59:27 1993

In article <26igv6$jhh@charm.magnus.acs.ohio-state.edu> you write:
> based on net wisdom, i am learning to use my brand new kent
> iambic paddle with my left hand (i am a rightie), and was just
> wondering if i should reverse the dot and dash connections so
> that the dot is on the thumb and dash on the forefinger. ie.,
> as opposed to the standard righthand construction with right thumb
> sending dots and the forefinger sending dashes.
>
> are there any compelling reasons for having the dots on the left
> paddle????
>

ell, having the dots on the left paddle makes it a lot easier to use
my paddle at field day :-). (Actually, this isn't quite true since the
keyer can reverse the paddles. However, the point is that most paddles
are wired with dots on the left.)

I'd be interested in any interesting responses you receive.

From: vbreault@rinhp750.gmr.com (Val Breault)

For What Its Worth department: I use a Vibroplex iambic paddle with
dots on the left and dashes on the right. I am right handed but operate
the paddle with my left hand.

When I set up my station I asked for the wisdom of the net and discovered
there wasn't much agreement as to the "proper" way to set up and use
an iambic paddle. One OF suggested that I ignore all the conflicting
advice and set it up the way that felt best to ME. I took his advice.

Paddle on left to keep right hand free for writing,
tuning, swatting at the kids, etc.

Dots on the left because I feel like my left index
finger has better coordination than my left thumb.

I've never had anyone complain about my setup...
I've never invited anyone in to operate it.

I've never had any trouble operating other stations
except for those with straight keys (never learned
how to use a straight key)

For What Its Worth

From: drt@athena.mit.edu (David R Tucker)

>
>Dots always go on the paddle worked by the thumb. Anything else
>is very confusing.
>

well, that depends on ... how often you switch hands, how often you
operate somebody else's paddles, and how often someone else operates
yours etc......

i am inclining towards dots on left, dashes on right, so that i can
still play with the paddles in the stores etc., without changing the
dot/dash paddle.

krishna

I solve this problem by using my right hand!

The easiest way to switch hands is to have two cables, one wired
for right, the other for left, and then just switch plugs. Or
wire in a DPDT switch!

If you can send lefty with righty-wired paddles, more power to you.

From: jepsen_st@goedux.enet.dec.com (goedux::jepsen_st)

I'm no expert, but I do use an iabmic key (Brown Bros. and Heath uMatic).
The technique that I use is to squeeze the key to produce some characters
or parts of characters. If you hold both paddles down simultaneously, the
keyer will alternate between dots and dashes. Whichever key is pressed
first will determine the order.
To send a 'c' for instance, press the dash key first as you squeeze the
paddles together, then release as the character completes. To send a
'q', hold the dash paddle down, after the second dash is nearly done,
touch the dot paddle and release it while continuing to hold the dash
paddle, when the character completes, release the dash paddle.

I hope this helps.....Steve..AI7W

From: jmorris@spider.co.uk (John Morris)
>
> well, that depends on ... how often you switch hands, how often you

> dot/dash paddle.
>

I agree. In moments of idleness (ie when listening to a real waffle station and being bored :-) I have tried sending with my left hand, and also turning the paddle upside down to see what reversed sending would be like. It was not as difficult as I had thought - though obviously needs practice, just like the usual way did back then.

My conclusion is that there is no "natural" way for the paddles to go: The brain can adapt to dots left or right, thumb or forefinger, or any permutation of the above. So I would recommend following the arbitrary standard of dots on the left, just for ease of switching beween your keyer and most other people's.

The way I heard it, dots on the left was originally because the strong thumb was needed to push against the spring loaded mechanism which makes the dots on a bug. Could just be an urban legend.

What I would like to see is a standard for the wiring of keyer jacks. We all seem to agree that the body should be ground, but whether the tip or the ring is the dot paddle seems to be arbitrary!

As Shakespeare should have said: "Oh what a tangled web we weave,
when first we practice to transceive".

pip pip!

2028. Rubber Duckies Banned!

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-10 15:32:23 UTC
From: bigsteve@dorsai.dorsai.org
Message-ID: <26q6m7$94r@dorsai.dorsai.org>
Source record: 276550
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave

The following item appeared on the Fidonet Ham Radio echo last week:

--*-*
NM>I was listening to our local SMART repeater, and there was a
>conversation going on about the prospect of the FCC passing a
>prohibition of using Rubber-duckies on 2-Meter handhelds. If somebody
>can confirm this, I'd really apprechiate it. I also severly doubt that
>the FCC would ever do this, because it would greatly limit the amount
>of mobility and flexability of the emergency services such as ARES,
>RACES, MARS and so forth.

NM>73, Nick @ KB8???
--*-*

Well I did some research and it's true. I found this forthcomming press release in the dumpster behind a building on M Street in D.C.

FCC BANS HAMS FROM USING DUCKIES!

In a surprise move today, the Federal Communications Commission banned the use of Rubber Duckies by Amateur Radio operators. Citing as their reason for the unusual ruling, FCC Chairman James Juello said, "We have recently found after a 2 year investigation, that the Amateur bands are getting further and further crowded by irresponsible operators who continue to violate the Communications Act and transmit with total disregard of Amateur procedures." Juello further stated that any Ham caught with a rubber duckie will have his license pulled.

Ed Hairless, spokesman for the American Radio Relay League, the Ham Radio organization in Newington, CT said, "The research by Psychologists and Forensic Psychiatrists hired by the league, have unanimously come to the conclusion that any Amateur that has a rubber duckie, or any other facsimile of a water fowl, floating in their bath tub is too immature to hold a license."

Reaction by hams to the ruling has been mixed. King Insain mentioned that when visiting the US he usually had a rubber swan since it takes too much time for the real swans he shares his royal swimming pool with to get through the customs department's quarantine. Former Arizona senator and presidential candidate Barry Coldwater said, "Heck, I was hoping they'd forbid the antenna they also call 'Rubber Duckies'. It would have been a perfect excuse to use the rod antenna on my HT as an electric cattle prod on Democrats' behinds."

How the FCC will enforce the the new rule is questionable, but Judd Slapback, the chief enforcement officer for the New York office says that

they expect to be paying surprise visits to randomly selected hams on Saturday nights, usually in the early evening. "We'll be accompanied by armed US Marshals and camcorders when we arrive, hoping to catch the violators in the tub with the illegal devices", continued Slapback.

Expecting backlash from enviornmentalists and the military, the FCC is reserving it's decision on whether or not to extend the ban to toy Whales and Submarines.

* "The Rubber Swan is mine." - Vaughn Meader

* "Rubber Duckie, I'm awfully fond of you." - Jim Henson

]electronics.

]Can anyone who has transmitted from a 93 Explorer tell me their experiences?

I recently bought a 93 Explorer and dearly love it. I have operated
2 meter and 440 from it with no problems. I don't know about HF. I have
determined that there is some gas pump noise which would generate significant
interference on HF, and some time I'm gonna pull off the gas tank and put
in filters. If anyone has tips on this, let me know!

>
> Can anyone who has transmitted from a 93 Explorer tell me their experiences?
Terry -
I own a 93 Explorer. Had no problems with VHF/UHF transmissions at 45
watts, using a small magmount whip ... EXCEPT as follows:
Rear Wiper would activate on many VHF freqs when xmitting at 45
watts. No problem at 5 watts.
Research indicated poorly shielded motor control box might be the
culprit. However, since the alarm system was also doing strange things
(not related to or caused by the radio), I had the alarm replaced.
The wiper now works normally.

Other hints: run power and ground directly from the battery. There are
a few inconveniently-located firewall pass-throughs you can use. Fuse
-both- hot and ground near the battery. Fusing ground protects the radio
in case the starter decides to use the radio as a ground-return (if
battery ground cable breaks or increases resistance).

Good luck, and enjoy the vehicle!

2031. Aluminum Tower Info Needed

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-10 15:51:57 UTC
From: dstone@bnr.ca
Message-ID: <dstone.7.0@bnr.ca>
Source record: 276555

I recently obtained a used aluminum tower. The tower consists of eight, 8 foot sections (approx. 60' tower). The widest section is at the base, with each sequential section tapering down, with the narrowest section at the top.

The tower is in quite good condition, with the exception of the top most section, which has several large cracks in the tubing. I would like replace this section, but I do not know who manufactured this tower.... (The previous owner is unreachable.)

Can anyone tell me who manufactures *** aluminum *** towers. I don't imagine there that many....

Any help would be greatly appreciated!!!

2032. Re: Ford Explorer Engine Computer and HF, UHF,

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-10 15:53:49 UTC
From: craigs@dseg.ti.com
Message-ID: <1993Sep10.155349.4533@mksol.dseg.ti.com>
Source record: 276561

I have a 92 Explorer and run VHF, UHF, and HF. Here are my experiences.

At one time, my rear-view windshield wiper would make a swipe whenever I keyed up on 2m or 450. About a year after I bought the truck, the rear windshield motor went out (unrelated to my hamming). The new motor doesn't have the key-up problem anymore....

Only other problem I have is with the cruise control. It speeds up and lurches when I'm on 2m, and seems to slow down when I'm on 450. A smart-ass friend suggested I stick to 220 :).

I've had no trouble with HF.

2035. Re: Emergency: cellular vs ham (was Re: Yagi for Cellular Phone?)

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-10 16:23:17 UTC
From: drenze@icaen.uiowa.edu
Message-ID: <1993Sep10.162317.8186@news.uiowa.edu>
Source record: 276559

Let's not flame John...he made the decision to use the best available means of communication which, in this case happened to be cell-phone. I'm sure many of us are both cellular phone users and hams--I know I am (or at least, I will be once my ticket gets here). I think the original question which spawned this thread was "why use cellular when you have 2M FM available?" which the original poster answered, in my mind with "because not all cabin users will be hams." Makes sense to me. I know about a month ago I would've *loved* to have had my ticket and a 2-M mobile as I was passing through Colorado...I sighted 3 tornadoes near I-76 (I think it was) and couldn't get through on my cell-phone to report them, though that would've been the easiest. *shrug* -- your milage may vary.

Peace es 73 de Doug N0Z??
03W 04D 22H 23M and counting...

2036. A Question

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-10 16:24:38 UTC
From: ODONNELLP@MAR65.MAR.ORA.FDA.GOV
Message-ID: <930910122438.25c0@MAR65.MAR.ORA.FDA.GOV>
Source record: 276553

>What exactly does 10-8 mean? I know what 10-4 means, as does everyone, but
>not 10-8. Negativland has an album called "A Big 10-8 Place." That's why I
>ask.

>>Mike,

>> I had a list of those "10 Codes" recently that showed 10-8 as meaning
>>"In service" (I guess as opposed to "grabbing a box of doughnuts" or "going
>>wee-wee." Doesn't seem to make sense in that context you mentioned, though.

>>CUL es 73 de BB

Brian & Mike,

The answer is this; the 10-codes are not universal! Many local agencies
assign their own meanings to the codes. For example, in Durham, NC, 10-8
does indeed mean "In Service", while in Columbus, Ohio, it means "B & E in
progress"! Here's another; 10-41 in Durham is "Begining tour of duty" and
in Columbus it's "Robbery"! And the ever popular "what's your 20" (from
the other HF hobby service) means "location" in Durham, and "drowning" in
Columbus!

Go figure!?

>quite uncommon. (BTW, I think a whole BUNCH of ex-military dewds used to pull
>that kinda stuff off in the late 1940s through the '60s when any military
> ^^^^^^^^^^^^^^^^
Brian,

Actually, when incentive licensing first started back in '66 or '67 (can't
remember for sure) this was not possible, as there was a sort of "apprentice-
ship" imposed on Advanced Class licensees. You could go from unlicensed to
Advanced in one sitting, but you were not permitted to take the Extra for
two (2) YEARS! I know, 'cause thats what happened to me in '67! And the
League called that "incentive licensing"! :)

>radioman knew Morse code and electronics theory inside-out.)

No calculators allowed! Solid CW copy of at least 1 minute out of a 5
minute test period (the text was random selection of QST articles), and
you were required to illustrate (draw schematics) of various xmitter and
receiver circuits, etc. BTW, you also had to demonstrate CW sending
ability, and the test was only available at FCC field offices. The only
thing you could take into the exam room was a pencil!

SB NEWS @ AMSAT $SPC0913
* SpaceNews 13-Sep-93 *

BID: $SPC0913

=========
SpaceNews
=========

MONDAY SEPTEMBER 13, 1993

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited distribution.

* ZRO TEST SCHEDULE *
====================
The ZRO Memorial Technical Achievement Award Program, or just "ZRO Test" has a new schedule for September and October, 1993, via AMSAT-OSCAR-13. This activity is a test of operating skill and equipment performance. Due to scheduling difficulties only three tests have been set up for this round, so be sure to mark the test dates and times on your calendar.

During a typical ZRO run, a control station will send numeric code groups using CW at 10 words-per-minute. At the beginning of the run, uplink power from the control station is set to match the general beacon downlink strength. This is level "zero". The control operator will send and repeat a random five-digit number, then lower his uplink power by 3 dB (half power) and repeat the procedure with a new random number. This will continue to a level 30 dB below the beacon (level "A").

A participating listener monitors the downlink signals till he can no longer copy the numbers. Those who can hear the beacon will qualify for the basic award by copying the code group heard at level "zero". The challenge is to improve home-station performance to a point where the lower-level downlink signals can be copied (levels 6 through A).

The following schedule of Mode "B" tests were chosen for convenient operating times and favorable squint angles. The tests can be heard on 145.840 MHz. Andy WA5ZIB will conduct all the tests. Mode "JL" tests will no longer occur due to the failure of A-O-13's 70-cm transmitter. Ed N5EM will be back next year after he completes station calibrations necessary to insure accurate Mode "B" activity. His "JL" tests were greatly appreciated.

Sunday Sep. 26, 1993 at 0545 UTC
Saturday Oct. 2, 1993 at 1335 UTC
Monday Oct. 18, 1993 at 0430 UTC

Note that the dates and days are shown in "UTC", thus the first and third tests shown occur in the late evening hours for those in North America. For example, the October 18th UTC test is at 11:30 PM CDT Sunday night (the 17th). Any changes will be announced as soon as possible via the AMSAT HF and A-O-13 Operations Nets.

ZRO brochures are available from WA5ZIB, Andy MacAllister, AMSAT V.P. User Operations, 14714 Knightsway Drive, Houston, TX 77083 for an S.A.S.E. with two units of postage. The brochure characterizes test procedures, means for obtaining certificates and gives some historical background about the program. New brochures were not made for the current round of tests, but this announcement and a graphical presentation of the satellite's view during the tests will be provided along with the March 1993 version of the brochure.

All listener reports with date of test and numbers copied should be sent to WA5ZIB at the address above. A report will be returned verifying the level of accurate reception.

[Info via Andy "WA5ZIB" MacAllister]

* FO-20 SCHEDULE *
==========
The following is the latest FO-20 mode JA transponder schedule from the JARL:

22-Sep-93 08:30 through 24-Sep-93 09:05 UTC
29-Sep-93 08:50 through 30-Sep-93 09:11 UTC

There will be no planned Mode JA operations on 15-Sep-93 so there are two Mode JA days the following week starting the 22nd.

[Info via 73 Richard, G3RWL]

* AO-21 NEWS *
==========
Peter, DB2OS, reports that AO-21 (RUDAK-2) is now operating continously in the digital FM Mode with no telemetry and no DigiVoice at present.

Telemetry and DigiVoice transmissions will resume again later this month and in October a special DigiVoice experiment will be held.

* STS-58 NEWS *

>
>

In general, I think it's far more productive to set up a number of small
nets (realizing that not everyone is going to be on every net) rather

than get mired into overambitious planning of "one" net and arguing over what frequency it should be on, as we've unfortunately done in the past.

I encourage others interested in the subject to further discuss it on Ham-Univ. Here are some instructions as to how to subscribe:

Send E-mail to listserv@listserver.njit.edu. In the body of the message, write:

SUBSCRIBE HAM-UNIV

and you should get an acknowledgement very shortly.

To post to the list, send mail to ham-univ@listserver.njit.edu. To unsubscribe, send mail to listserv again and put:

UNSUBSCRIBE HAM-UNIV

in the body.

Remember to use ham-univ only for message posts and to keep the listserv updated with respect to your E-mail address (or lack thereof) to save work for those dedicated individuals at the New Jersey Institute of Technology who have extended this service.

Hope to see you on the list soon!

73, Paul W. Schleck, KD3FU

Yep, it's John Henry versus the steam hammer all over again. If our
goal is to preserve CW, then we need to set aside special preserves
for it. If our goal is to maintain our charter of advancing the art,
then we may want to take a more Darwinian view.

Gary

2048. Satellite Tracking Software - Best?

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-10 18:03:03 UTC
From: S1.RSW@ISUMVS.IASTATE.EDU
Message-ID: <CD5Gso.E3s@news.iastate.edu>
Source record: 276570

Fellow Netters:

I'm sure this is probably a FAQ on this bb, however I'll keep
this short:

I'd like opinions/suggestions about what is the "best"
sttellite tracking program [DOS compatible] available today, BEST
in terms of ease of use, accuracy, and availability for IBM clone
use (memory requirements?). I would like to try some satellite work
(at least Mode A on RS-10 to start) to see how it works and if I
like it, however I am in need of a good tracking program for obvious
reasons. I have all necessary equipment for a Mode A station with
the exception of the software.

Your comments either by e-mail to s1.rsw@isumvs.iastate.edu
or posted on the bb would be helpful (sources of programs?).

Thanks in advance, and 73,

Rob Wallace, WA2SPO
Ames, Iowa

Or how about approx 0.13mV. (approx 90db down from 5V). Does this still
seem preposterous?

[Posting ridiculing Amateur Radio emergency communications deleted]

Good ol' John De Armond strikes again. I sometimes wonder if John actually believes any of the stuff he posts, or if he is just doing it to stir up a reaction.

In any case, I expect that a cellular phone would be the better solution for the run-of-the mill traffic emergency. It is full duplex for one thing, so you don't have the problem of "doubling" with the 911 operator. Also, the operator instantly understands you are calling from your car, which sometimes takes some explaining when using a ham autopatch. And, as John so tactfully points out, you don't usually have to wait for the frequency to clear with a cell phone.

In a major communications emergency, however, I think the ham frequencies would normally be a better bet. The cellular system, like the rest of the telephone system, will be jammed with calls. The 911 line will be overwhelmed. Once the ARES, RACES or other amateur emergency groups get going, the emergency nets will be connected with each of the area Emergency Operations Centers and Incident Command posts involved. Assuming the local emergency group has its act together, the nets will be well-staffed with trained operators who will know what to do and where to route emergency messages.

2053. HAM-server help file

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-10 18:39:25 UTC
From: HAMSinfo@GRAFex.Cupertino.CA.US
Message-ID: <gate.747686365@GRAFex.Cupertino.CA.US>
Source record: 276431
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.digital.misc

All you might ever want to know about the KA6ETB HAM-server

Hardware:
========

386/25 PC clone
Telebit QBlazer modem
20-Meg file space reserverd for archive

Software:
========

Waffle 1.65
WFSmail 2.03

General Information:
===================

Orders for files are filled between the hours of 0200-0400 daily. This is so those hosts through which the traffic is forwarded are not overloaded. Since we all depend on the generosity of others to carry the mail, it behooves us not to make them angry.

ASCII (text) files are split at about 30,000 bytes or 700 lines (which ever comes first). UUENCODED binary files are split at about 750 lines.

If you are using a PC and you do not have UUDECODE, follow these steps:

1. Order UUDECODE.BAS or UUDECODE.C, and UUEXE515.ZIP.
2. Compile UUDECODE.BAS or UUDECODE.C on your system.
3. Use the resulting executable to UUDECODE UUEXE515.ZIP. UUEXE515 has documentation about UUENCODE/UUDECODE.

You are all set to start ordering binary files from HAM-server.

/hamradio/newfiles/ contains files that have not yet been categorized. You can order a list of newfiles by sending the following in an email.

NEWFILES <date>

<date> is in the form of MM-DD-YY, and is required.

If you order a file and do not get it, check the index to be sure you have spelled the filename correctly. If you have ordered the file correctly, then order a new INDEX, as I may have moved the file to a different directory. The system is still expanding, and I am trying to keep it in managable chunks.

Also, if you have ordered files from HAM-server and do not receive them, it might be because your return path is incorrect. My bounce mailbox fills up quite regularly with bounce messages. And, since the path is incorrect, I cannot contact you to let you know.

Orders must be sent to HAM-server. Orders sent to KA6ETB or HAMSinfo are ignored.

A new INDEX is automatically generated every Sunday and when files are moved or added.

Message Command Language:
==========

There are some general rules for ordering files:

o Commands and operands are not case sensitive.

o Leading spaces are permitted before the command. Commands must be the first token on a line.

o A '#' character as the first character on a line is treated as a comment. The line does not cause an error.

o A line beginning with the string "--" is treated as end of input. The remainder of the message is ignored.

The commands are:

GET
HELP
INDEX
NEWFILES
PING
QUIT

The GET Command:

The GET command sends the requested file. The syntax for the GET command is:

GET <filespec> [uue[ncode] | xxe[ncode]]

<filespec> is required. <filespec> must specify a path, but without a drive specification. The filespec is not relative to any directory.

uuencode or xxencode is optional and may be abreviated as "uue" or "xxe", respectively. If neither are specified, the file is sent according to the file extension. Files with these extensions will be sent encoded:

com exe zip pak arc arj gif lzh lha zoo z tar

If uuencode is specified, the file is sent uuencoded.

If xxencode is specified, the file is sent xxencoded.

For example:

GET /hamradio/00-index.txt
GET /hamradio/utility/uuexe515.zip uue

are syntactically correct.

The HELP Command:

The HELP command gets this file.

The INDEX Command:

The INDEX command sends an index of files available from HAM-SERVER.

Use

GET 00-INDEX.TXT

to get a description of the files.

The NEWFILES Command:

The NEWFILES command sends a list of files newer that the user
specified date.

The systax for the NEWFILES command is:

NEWFILES <date>

<date> is required. <date> has the form of mm-dd-yy. HAM-SERVER is
strict about checking the form of <date>; if it does not look like
it expects, the command will be rejected.

A valid specification for the NEWFILES command is:

NEWFILES 02-15-92

The PING Command:

The PING command causes HAM-SERVER make a simple reply, via the
session transcript, to the requestor. To test the path to HAM-SERVER,
send the PING command.

The QUIT Command:

The word "quit" as the first token on a line causes HAM-SERVER to
quit processing input as if end of input had occurred.

>interference on HF, and some time I'm gonna pull off the gas tank and put
>in filters. If anyone has tips on this, let me know!

The fuel-pump noise problem is a well-known Ford defect. I recently
heard from one of our members who informs me that there is a complete
Ford service bulletin # 93-15-6 detailing how the problem can be
covered under warranty. Your dealer should be able to work from
this document.

On the down side, the reports I have received indicate that the
in-tank noise filter may not be real effective at eliminating
the noise, at least for the lower part of the HF band. One fellow
wants to try external ferrite inductors and capacitors. He said that
if it works he will send it in for QST "Hints and Kinks." It will
almost certainly be published.

I can't give you the technical details (because I don't know the answer)
but it is not uncommon here in Honolulu for AM stations to share the
same tower.

Since so many folks have responded to me, I will post the article here
as soon as I can find it in the library.

I have a two month old 93 and have had no problems on two meters. I may also be worth mentioning that at least on the 92 and 93 models Ford used non-metalic tinting in the windows, so glass mount antennas are ok.

Can't help you directly with the 6BB call, but just for another data point:

The Washington State University Rho Epsilon Amateur Radio Fraternity
was started in 1911 (before the ARRL!), and had the initial call of 7UL.

It's current call is W7YH.

Certainly sounds like a similar call to your old one.

Curt Mills, WE7U,
Past President of Rho Epsilon ARF (1984-85).

Below is the information I have gathered on radio/phonetic/
spelling alphabets for Russian. I am posting for information
and in case anyone has anything to add.

1:

Anna, Boris, Vasiliy, Galina, Dmitri, Elena, Zhuk, Zoya, Ivan,
Ivan kratkiy, Kilovatt, Leonid, Maria, Nikolai, Olga, Piotr,
Roman, Sergei, Tamara, Uliana, Fiodor, Hariton, Tsentr, Chelovek,
Shura, Schuka, Tviordiy Znak, Znak (for Miagkiy Znak), Eduard,
Yuri, Yakov.

Note: no entry for e" or bI.

2: as above but with the following differences:

G - Grigoriy
Zh - Zhenya
Z - Zinaida
K - Konstantin
M - Mikhail
P - Pavel
E - Ekho

Obtained from the Soviet Amateur Radio Club.

3:

Aleksey Boris Vasiliy Grigoriy Dimitriy Yelena Zhenya Zoya
Ivan Ivan_kratkiy Ksenya Leonid Mariya Nikolay Olga Pavel
Roman Sergey Tatyana Ulyana Foma Khariton Tsaplya Tchelovyek
Shura Stshuka Emiliya Yuri Yakow

Note: no e", bI, hard sign, soft sign.

Referred to as the Russian spelling alphabet.

4:

Aleksej Boris Vasilij Grigorij Dmitrij Elena Zhenja Zoya
Ivan Ivan Kratkij Kilowatt Leonid Maria Nikolai Olga Pavel
Roman Sergej Tatjana Uljana Fjodor Hariton Zaplja Chelovek
Shura Schuka Tviordiy Znak Igrek Miagkiy Znak Emilija Yuri
Jakow

Note: no e".

Actually, I was using the term in it's original sense. I had a particular
interest in frequency range expansion (which I have since learned is not
an option for the HTX-202), but I was interested in any 'mods'.

Cheers,
Tom

2063. RFC: Re: Daily Solar Geophysical Data Broadcast for 07 September

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-10 21:14:43 UTC
From: mark@ve6mgs.ampr.org
Message-ID: <1993Sep10.211443.21319@ve6mgs.ampr.org>
Source record: 276463
Cross-posted to: rec.radio.amateur.space,rec.radio.amateur.misc

Cc: oler@rho.uleth.CA rra-wg@amdahl.com

oler@rho.uleth.CA (Cary Oler) writes:

>!!BEGIN!! (1.0) S.T.D. Solar Geophysical Data Broadcast for DAY 250, 09/07/93

These bulletins are no different than the (PKT) Geophysical Report bulletins
posted to rec.radio.info at the moment (The Packet ones add what some would
call superfluous packet headers). I would like to request comments from
interested individuals as to what to do with these bulletins in our
new rec.radio.amateur.* heirarchy.

I propose to cross-post the bulletins already posted to rec.radio.info
with the (PKT) Geophysical reports subject line (These are the shortened
information bulletins, the more verbose versions will remain in
rec.radio.info) to the rec.radio.amateur.space newsgroup. And, to request that
the current solar reports posted to rec.radio.amateur.misc cease.

However, I forsee the following areas where there may be resistance to
my proposal:
1) rec.radio.amateur.space participants are *not* interested in
hosting these reports, as it may drown out the discussion
environment that seems to be forming within that group.
2) rec.radio.amateur.misc participants, which include many of the
listserver participants, may wish to keep on viewing these
reports.

To #1, I currently cross-post several other bulletins to
rec.radio.amateur.space, and have only received ONE complaint so far. I
suspect that the fact the bulletins are cross-posted reduces the number of
actually viewed bulletins in that group (through the news-reading softwares
handling of cross-posted news) and my guess is perhaps that the solar
reports will not have a major impact and can be filtered effectively
by the tools outlined in the rec.radio.info FAQs as well if desired.

To #2, the proposal could be modified to include cross-posting to
rec.radio.amateur.misc, keeping the bulletins there, and garnering the
benefits of reducing new bandwidth by utilizing the cross-posting
mechanism.

Status Quo, I feel, is unacceptable, as I will begin making efforts to
switch over to cross-posting the bulletins to at least rec.radio.amateur.misc
and asking Cary to cease sending the bulletins to info-hams@ucsd.edu as
a minimum.

Now, what to do with the solar reports in rec.radio.shortwave ... :-)
<as he feels the power surging under his fingertips and the accompanying>
<rush of corruption! :-) >

I am posting this for Tom, N5OFF, who writes:

I heard two older gentlemen, sort of the 160 meter band types,
ragchewing on 6785 LSB at about 240Z on 9/9. They gave their
callsigns as (I think) WUK403 and WUK410. One guy talked about
flying a C-46 out to a town in Kansas this week. Since there
aren't many C-46's around, I figured this guy was with some
sort of "special" outfit, or maybe the flying was a sideline.
In any case, they said they would try again the next night, and
looked forward to winter when the band would be quieter. They
didn't use any of that "over", "wait", or "out" stuff that
MARS uses.

Does anyone know who these guys belong to?

>Does anyone know if the Boxboro hamfest is going to take place this
>fall? I see it in the hamfest listings for Fall'94 but there is
>nothing listed for fall 1993.

Boxboro is held once every two years and the next one is Fall 1994. A
group up in New Hampshire held a convention in Manchester that is
suppose to cover the years that Boxboro does not.

All you might ever want to know about the KA6ETB HAM-server

Hardware:
========

386/25 PC clone
Telebit QBlazer modem
20-Meg file space reserverd for archive

Software:
========

Waffle 1.65
WFSmail 2.03

General Information:
===================

Orders for files are filled between the hours of 0200-0400 daily. This is so those hosts through which the traffic is forwarded are not overloaded. Since we all depend on the generosity of others to carry the mail, it behooves us not to make them angry.

ASCII (text) files are split at about 30,000 bytes or 700 lines (which ever comes first). UUENCODED binary files are split at about 750 lines.

If you are using a PC and you do not have UUDECODE, follow these steps:

1. Order UUDECODE.BAS or UUDECODE.C, and UUEXE515.ZIP.
2. Compile UUDECODE.BAS or UUDECODE.C on your system.
3. Use the resulting executable to UUDECODE UUEXE515.ZIP. UUEXE515 has documentation about UUENCODE/UUDECODE.

You are all set to start ordering binary files from HAM-server.

/hamradio/newfiles/ contains files that have not yet been categorized. You can order a list of newfiles by sending the following in an email.

NEWFILES <date>

<date> is in the form of MM-DD-YY, and is required.

If you order a file and do not get it, check the index to be sure you have spelled the filename correctly. If you have ordered the file correctly, then order a new INDEX, as I may have moved the file to a different directory. The system is still expanding, and I am trying to keep it in managable chunks.

Also, if you have ordered files from HAM-server and do not receive them, it might be because your return path is incorrect. My bounce mailbox fills up quite regularly with bounce messages. And, since the path is incorrect, I cannot contact you to let you know.

Orders must be sent to HAM-server. Orders sent to KA6ETB or HAMSinfo are ignored.

A new INDEX is automatically generated every Sunday and when files are moved or added.

Message Command Language:
==========

There are some general rules for ordering files:

o Commands and operands are not case sensitive.

o Leading spaces are permitted before the command. Commands must be the first token on a line.

o A '#' character as the first character on a line is treated as a comment. The line does not cause an error.

o A line beginning with the string "--" is treated as end of input. The remainder of the message is ignored.

The commands are:

GET
HELP
INDEX
NEWFILES
PING
QUIT

The GET Command:

The GET command sends the requested file. The syntax for the GET command is:

GET <filespec> [uue[ncode] | xxe[ncode]]

<filespec> is required. <filespec> must specify a path, but without a drive specification. The filespec is not relative to any directory.

uuencode or xxencode is optional and may be abreviated as "uue" or "xxe", respectively. If neither are specified, the file is sent according to the file extension. Files with these extensions will be sent encoded:

com exe zip pak arc arj gif lzh lha zoo z tar

If uuencode is specified, the file is sent uuencoded.

If xxencode is specified, the file is sent xxencoded.

For example:

GET /hamradio/00-index.txt
GET /hamradio/utility/uuexe515.zip uue

are syntactically correct.

The HELP Command:

The HELP command gets this file.

The INDEX Command:

The INDEX command sends an index of files available from HAM-SERVER.

Use

GET 00-INDEX.TXT

to get a description of the files.

The NEWFILES Command:

The NEWFILES command sends a list of files newer that the user
specified date.

The systax for the NEWFILES command is:

NEWFILES <date>

<date> is required. <date> has the form of mm-dd-yy. HAM-SERVER is
strict about checking the form of <date>; if it does not look like
it expects, the command will be rejected.

A valid specification for the NEWFILES command is:

NEWFILES 02-15-92

The PING Command:

The PING command causes HAM-SERVER make a simple reply, via the
session transcript, to the requestor. To test the path to HAM-SERVER,
send the PING command.

The QUIT Command:

The word "quit" as the first token on a line causes HAM-SERVER to
quit processing input as if end of input had occurred.

2068. Neighborhood watch groups

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-10 21:55:20 UTC
From: geraldg@oakhill.sps.mot.com
Message-ID: <CD5rK8.DLM@oakhill.sps.mot.com>
Source record: 276450
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

A coworker came to me today and asked if it was possible to use ham radio as means of communication for a neighborhood watch group. Would someone please tell me if they are aware if this violates some section of Part 97? There is no money involved (i.e., no one is getting paid for their time or service). Also, he indicated all the volunteers are willing to earn the Technican class license. They want to stay away from CB (I don't blame them, as lots of bad guys use CB nowadays), and I don't know if the little 6m walkie talkies have enough flexibility for their needs.

If they do pursue this path, does anyone have a recommendation for a 70cm band HT with extended receive capabilities (the Austin PD uses channels around 470 MHz)? They would like to be able to monitor calls and transmit their traffic on a single unit.

Please cc: me if you choose to post a reply - thanks.

73,
Gerald

Greg Dolkas (greg@core.rose.hp.com) wrote:
[lots deleted...]
: As a final step, get some good epoxy and run a bead around the BNC connector
: to keep it from moving in the future. Come to think of it, you might want to
: put some on the inside while the radio's open, but I put it on the outside.
: Seemed safer.

I'd be rather disinclined to epoxy the connector in. The one on my DJ-F1T
is nearing the end of it's useful life, as the "ears" that interlock with
the plug to hold the latter on are about 2/3 worn off from changing antenna
connections 4 to 10 times a day for two years...

2071. Corrosion inhibitors for connectors?

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-10 22:33:02 UTC
From: nntp@msstate.edu
Message-ID: <nntp-100993173159@diag121.cvm.msstate.edu>
Source record: 276435

There's been a discussion recently over on rec.autos.vw concerning electrical connector contact enhancers and corrosion preventatives, but nobody seems to have a handle on specific products sold to perform this potentially useful function.

I feel fairly certain that I saw a short article somewhere in the past few years that discussed these products. I thought it was in QST, but last night I checked all the QST indexes from 1984 to 1992 and found nothing. I'm aware of Stabilant 22, but I think we're more interested in something less sophisticated and less expensive.

Does anyone recall the article or have any recommendations for greases, pastes, liquids, etc. that would be suitable for facilitating electrical contact and inhibiting connector corrosion in cars, boats, antennas, etc.?

Thanks

Bill Maslin K3OSH

2072. Christmas Island QSO on 10m yesterday (9/10 at 200Z)

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-10 22:49:30 UTC
From: myers@cypress.West.Sun.COM
Message-ID: <26r09qINN5os@abyss.West.Sun.COM>
Source record: 276436

Yesterday, at 0200Z or so, I was tuning around 10m CW and it sounded dead. I heard a couple of CB pirates at 28.015 Mhz, so I tuned down to 28.014 MHz and sent a long CQ, partially out of boredom and partially trying to irritate the CBers.

Imagine my surprise when someone responded to my call, much less with the callsign 'T32BE'. He gave his location as Christmas Island, said he just got his antennas up, that he was on vacation and to QSL via WC5P, which I believe is his US call (the names match).

One of our local DX gurus confirmed that this was a legit QSO, so I'm looking forward to the QSL :-). Fact is, I'm not an avid DXer, but this was novel.

Oh, by the way, yes, I worked the guy using 20WPM CW...

This is fairly long. Sorry about that. I hope this answers some of
Marc's questions. It is posted because perhaps others could use the
information contained in this message.

There are several commercial, shareware and freeware applications that can do what you ask. They use one or more of the standard coverage predition analysis methods. All applications that I am familiar with use a three second or thirty second digital terrain database.

The 1st is SHADOW. SHADOW is a Telecommunications Analysis Services program which creates a shaded plot showing areas directly in line-of-sight of a given reference observer/antenna. The user supplies the reference/observer antenna latitude and longitude, the elevation above mean sea level, and the height above ground. The user also specifies the height of the terminal observer/antenna, which can be entered relative to the terrain (as if one were in a car) or as a constant height above mean sea level (as if one were in an aircraft). The output plot is broken into three regions: 1) the white area of the plot indicates that the reference is radio line-of-sight to the terminal and to the terrain below the terminal; 2) light dots indicate where the reference is line-of-sight to the terminal but is beyond line-of-sight to the terrain below the terminal; and 3) heavy dots indicate where the reference is beyond line-of-sight to either the terrain or both the terminal and the terrain because of natural blocking or shadowing by the region's topography.

The 2nd is HORIZON. HORIZON is the line-of-sight horizon for 360 degrees about a selected transmitter/receiver site using digitized topographic data.

The 3rd is PATH PARAMETERS. PATH PARAMETERS is a program which can be used to calculate path geometries from a specified location (called the reference site) to other locations (called terminal sites). The latitude and longitude of the reference site must be given, but the terminal site locations can be specified using a number of ways.

The 4th is CSPM (Communication System Performance Model). CSPM creates detailed shaded or contour plots of basic transmission loss, field strength, power density, or signal-to-interference ratios from one or more transmitters in a given geographical area. It uses an irregular terrain model (ITM) is the point-to-point mode for determining path loss along radials of about one degree azimuthal intervals around a transmitter. The ITM propagation model is applicable to analyze mobile, broadcast, or radar coverage and interference problems in the 20 MHz to 20 GHz band.

CSPM calculates signal levels in a user-defined geographic area. The signal is calculated to a grid spacing of 320m in both north-south and east-west directions, and stores in computer memory. Plots can be created of signals within the area calculated. The plots can be line printer or pen plot on paper. The line printer output gives the signal level at each memory location rounded to the nearest 4 dB. The pen plot can be in either color or black and white, and can show up to five contours of signal level within the plot area along with other optional informational such as landmarks and political boundaries.

The 5th is WiNGS. WiNGS is a Wireless Network Graphics System. A WiNGS workstation links, displays and analyzes system data, giving engineers and network managers the software tools to design, manage and expand complex wireless communication systems. WiNGS features frequency planning, predictive and field data integration, 3-D propagation modeling roadway/geopolitical overlays and switch data reporting. This software supports the UNIX-based software with extensive antenna attenuation and digitized terrain databases. It also provides custom terrain digitizing services and is equipped to digitize large geographical areas in any format for use with any propagation analysis software.

Organization: The George Washington University, Washington D.C.

Lines: 40

Hello all. I own a firm which provides data to engineers in the
commercial communications world (FM, AM, TV, Cellular Radio,.....).
People & Engineers call in to use my computer which has things
like carey contour programs, 30 and 3 arc second terrain data bases,
and other cool stuff. I make money, and life is good.

Now comes what I do for fun. I like radios, and am explicitely interested
in RF propagation. I have done a lot of work in UHF propagation
job related and personal. So, are there folks out there with experience
with the LONGLY-RICE propagation model (NBS-101) and BULLINGTON, and
the misc. other models?? Please be in touch!

ALSO: I have the US Geological Survey's 3 arc second terrain data base
on CD-ROM which I sell and also make available to on-line users. This
service don't cost much, and can be very useful in determining point-to
point terrain profiles. Would other HAMs be interested in getting FREE
access to such a thing? I know you need to determine average terrain
for a repeater application (I have such a program running and would
be willing to allow FREE access to folks if it would be of use) and
know many folks want to do point-to-point terrain profiles to specific
hops. What could I do to make the life of fellow radio & propagation
folks easier?

Let me have your ideas -- I got all this data, I would like to see
it used in the NON-COMMERCIAL enviroment at NON-COMMERCIAL (FREE)
rates.

Thanks for any input you can offer. Sorry -- I hate useing UNIX spell,
so you get to try to guess at a couple of the above words.....

Best regards to all -- Rich

"I am not an idiot, but I play one on usenet!"

IN ANOTHER MESSAGE HE SAID:

ANNOUNCING FREE ACCESS TO 3 ARC SECOND TERRAIN DATA

We finally had enough time to get a ham specific terrain
program together. Here is the process:

1) drop me a e-mail note at biby@seas.gwu.edu. Please include
A) your call
b) you mailing address
c) a brief (1 sentence is fine) description of what
you are doing -- "Working with a local repeater" or
"looking at the path to Bob's house.."
2) We'll add your calls to the access list and e-mail
you back our phone number and all the bits/stop/parity

stuff.
3) We reserve the right to send you propaganda about our
company, but we promise to be non-offensive.

Everyone gets three accesses for the asking. If you need more,
just ask and give us a little idea of what your up to. We
just want to make SURE that this is being used for amateur
purpose. We don't care what you are doing as long as it
is ham related, not for profit.

It takes about three - four minutes to retrieve data and
down load it to your machine. No net access is available.

Rich Biby | 205 N. Evergreen Street, Arlington, VA 22203 (703) 528-8489
KD4DSX | Communications Data Services, Inc.
we are the | 6105-E Arlington Blvd, Falls Church, VA 22044

parents | WORK: rich@comm-data.com SKOOL: biby@seas.gwu.edu
warned us | "I am not an idiot, but I play one on usenet!"
about | Root Emergency Procedure: type "rm -rf /* <cr>"

IN STILL ANOTHER MESSAGE HE SAID:

Hello all!

I'm still here! I'm crazy, maybe, but I'm giving away to anyone who
can afford a long distance call, free - YES FREE, access to my
3 Arc Second Terrain Data Base. WHY? Because we like you, M-O-U-S-E!

But seriously, folks -

I have a digital 3 arc second terrain data abse (the US Geological
Survey's) on my computer. I'll gladly let hams at it for free.
Send me a short e-mail note with your call and a one sentance
explanation about what you are doing (just so I can be sure
you are not a commercial user) and I'll give you 3 access credits
to the data.

It is most useful for point-to-point applications. Because the interface
is non-graphical, it tends to be most powerful in eliminating the need to
purchase TOPO (1:24,000) maps to look at obstructions.

I have nothing to gain, except an advancement of the radio
communications art. Take advantage of it -- I can't say I'll be
able to offer it forever.

I can't spell & I hate using UNIX spell - so please ignore any
errors in the above.

Best wishes to all, peace among all people. 73s,
Rich

2076. Radio Shack HTX-404 Reports ?

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-11 00:14:17 UTC
From: ODONNELLP@MAR65.MAR.ORA.FDA.GOV
Message-ID: <930910201417.2a3c@MAR65.MAR.ORA.FDA.GOV>
Source record: 276441

Radio Shack HTX-404 Reports ?

Rich asked:

>Any one use the HTX-404 UHF handy that would like to offer some comments to
>the net ?

Yes, I own one (202 also) and I do like them alot actually. I'm not a real FM fan, but I find the 404 to be quite OK. It seems to be pretty much impervious to the intermod problems of most of the wideband HT's that are more popular these days. I believe it to be a good value. The biggest fault I see is the limited selection of battery capacity, but I have heard (don't know this to be accurate however) that some of the older Icom type batteries may work on it. I have not been able to prove that. Maybe someone else on the list knows for sure. I do make use of the AA pack as well using Ni-cad types, and they actually provide a bit more life than the supplied pack.

The receive audio is wonderful. Much better than ANY HT I have ever used, except Motorola. No wimpy Icom audio on these dudes! I also have an Icom 2SRA, which I enjoy, but the audio is awful compared to the RS.

They both do real FM as well, which may be important to you if you're considering packet (I'm not a packateer so it doesn't matter to me).

A close friend just bought one of the 202's, and I can tell you that the transmit audio is also superb. No hint of bass emphasis and mushy audio that are common to other HT's that I've heard him use over the years. The transmit audio is clean, clear and very natural sounding. He sounds like himself on his, not some nasally somebody else.

They both also offer full PL encode-decode, built in. Most of the others require options for full PL capability. And this PL decode is absolutely effective. You hear absolutely nothing, ever, unless its a signal that is transmitting the appropriate PL! Nothing! Some of the others aren't that good. In fact, you can program DIFFERENT transmit and receive PL tones if you might need to do that (I can't imagine why, but its there!). Some others don't permit that.

They both also have two separate memory banks. One is what you might call standard memory (1-12), and there's a bank, of three priority memories that can be scanned with or separately from the standard 12. I mention this feature, as its not commonly known or understood that its there actually. I find this to be very useful, as I may not want to scan all memory at times, and may only want to scan the three more important frequencies in the P memories. Which I often do. Or, perhaps I want to monitor one of the standard, and still scan the three P's! Which I also often do.

>Can it transmit 430-440 as well ?

Why the devil would you want to do that? I hope its not for possible simplex use! There are weak-signal guys, satellite up/downlinks, EME activity, etc, down there and they don't need FM or rackety packet types down there to screw them up. The answer is, I don't know; but I hope its NO!

>Does it have a memory dialer ?

Yes, but I've never used it. Never make patches.

>how much are these going for and are they available now ?

$299 I think, for the 404. The 202 is presently on sale for $199.

n4hy@tang.ccr-p.ida.org (Bob McGwier) writes:

>No but are you really suggesting that there is a useful signal at the
>.00000005 V level in there? Then if not, why do I need 90+ dB dynamic
>range in my A/D if I have plenty of dynamic range in my processor to
>do the algorithm adequately.

>Robert W. McGwier | n4hy@ccr-p.ida.org

Bob, first let me apologize for the communication I sent directly to you. Your "help" caught me at a very bad time.

I am running some tests on my ICOM-725 which I will report on here when I am finished. I sincerely believe that you can get a 5 volt peak-to-peak and a 5 mV peak-to-peak at the same time out of an audio amplifier. Note, it's milivolts, not microvolts. I have compared 8-bit A/Ds and 16-bit A/Ds side by side and the 16-bit is aurally superior with the same algorithms.

I suspect that the speced audio dynamic range is a minimum guaranteed value based on SSB operation. When one is operating CW with the AGC off, the audio gain at maximum, and the audio level manually controlled using the RF gain control, could be the dynamic range is higher.

Looks like you are willing to admit that a 16-bit system introduces 48db less quantization noise than an 8-bit system. Even if I am wrong about the dynamic range of a receiver audio, why deliberately introduce noise when, for the same price you can buy a 16-bit system instead of an 8-bit system? And I know that you know that a sigma-delta system reduces the noise that you can hear even further than an equal-bit successive approximation A/D assuming over-sampling in the s-d system and not in the s-a system which is normal practice.

Just want to point out that if you believe that there is no 5 microvolt signal buried in the noise, you will never find it even if it's there. There just might be a pony in that pile.

:-)

Actually The Ignorant Splut is volatile enough that he is more entertaining
to watch than he is annoying enough to kill. Why, all you have to do is
mention maurice in connection with a radio and Splut sounds off like the
siren on his ambulance. At least as good as what's on TV.

He is obviously using RN which starts to choke after a dozen or so killfile
entries. So what we need to do is come up with all the possible of spelling
morrice so he'll pack his killfile full. Not so much as to make him
abandon the group, just enough to tweak.

>in DSP based filters for ham hf cw is quite consistant with theory.

Thanks, Dave, I needed that. I first tried 8-bit A/Ds and then 10-bit A/Ds. I was not even happy with the 10-bit performance. So went to a 16-bit sigma-delta system with a two-stage front end filter and now I'm happy with the hardware.

This past summer I passed my technician + code exams, and I was satisfied.
However, this fall I started my Music Theory course, and was surprised at
how easy some of the ear training exercises are because of morse code. For
example, the teacher was having us write down the rhythm he was singing:

Te Tah Tah Te = eigth quarter quarter eigth

except I heard
dit dah dah dit = and recognized it as a 'p'

now I'm hearing letters and life is much easier for me.

I'd guess U.S. Armt Corps of Engineers. Also, by C-46, he *might*
have been referring to a CH-46 'Sea Knight' helicopter, mostly operated by
the USMC.

ARLP036 Propagation de KT7H

ZCZC AP97
QST de W1AW
Propagation Forecast Bulletin 36 ARLP036
>From Tad Cook, KT7H
Seattle, WA September 10, 1993
To all radio amateurs

SB PROP ARL ARLP036
ARLP036 Propagation de KT7H

Solar activity still continues its downward spiral. Average solar flux for the past week was nearly nine points lower compared to the week before, and every day the flux was lower than the average for the previous ninety days. Conditions were disturbed on September 3 and 4 due to a coronal hole. Recurring coronal hole activity should produce more severe disturbances in a couple of days, around September 12 and 13. This could cause some disruption during the Worked All Europe DX Contest over the weekend.

Next watch for a slight increase in solar flux, peaking near 95 around September 21 through 24. Flux levels should drop to around where they are now after the beginning of October.

Sunspot Numbers from September 2 through 8 were 33, 36, 42, 33, 29, 14 and 27, with a mean of 30.6. 10.7 cm flux was 81.1, 79.6, 79.2, 80, 78.9, 78.4 and 79.1, with a mean of 79.5.

The projection for this week is from Arlington Heights, Illinois to Germany.

80 meters should be open from 2230 to 0630z, peaking from 0030 to 0430z. 40 meters should be open from 2130 to 0630z, with the best times from 2330 to 0530z. 30 meters should be good from 1700 to 2330z, and one a some days on into the local USA evening. 20 meters looks good from 1330 to 2200z, and best from 1500 to 2030z. 17 meters may be open on some days beginning at 1330z and more often starting around 1630 until around 2100 or 2300z. 15 meters does not look too promising, but on a few days per month it may be open from 1630 to 2130z. 12 meters may be open on some days from 1830 to 2000z. 10 meters does not show much promise this coming week over this path.

Now TWICE as many outdoor tailgate spaces available ....

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS

FLEA all SUMMER at MIT
September 19th, 1993
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $2 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

!! RAIN or SHINE !! Have no fear of rain, a covered
tailgate area is available for all sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

Hmm, I guess if someone had seen the wreck, written a request for help
on a postcard, addressed it to "911" and dropped it in the mailbox, he
would have been trying to help. Pretty irrelevant though. Just like
ham radio is becomming for emergency work, especially when ARES
anal retentives are involved. Want to hear more stories?
I have a sackfull.

John

Good 'ol Alan. Gets his ARRL dander up again. The only fiction in that post was the guy's call. You didn't like that one, let's try another.

>In a major communications emergency, however, I think the ham frequencies
>would normally be a better bet. The cellular system, like the rest of
>the telephone system, will be jammed with calls. The 911 line will be
>overwhelmed.

Well let's talk about a larger emergency. About 4 years ago, when I was still active in our local club (North Fulton Amateur Radio League), I got called out in the middle of the night. Seems that a storm and a construction accident had cut power and phone cables at opposite ends of north fulton county, isolating Rosswell, Alpharetta and surrounding areas. Worse, all outside connections to North Fulton General Hospital, the region's trauma center, were severed. Though I refuse to be a member of ARES, I listed my name with the club as an emergency volunteer. Thus I got called. We were to help reestablish critical communications. I grabbed my HT, my cellphone, a 12 volt power supply, and my emergency kit (cables, connectors, fuses, spare batteries and mics, etc) and headed out. I volunteered to go to the hospital. So did an ARES guy. We didn't know ahead of time what was needed. When I got there I realized the emergency room was completely isolated. I therefore got my cellphone and the power supply and set it up on the nurse's desk. Since the cellular system is microwave-linked, highly redundant and emergency powered, it worked fine. I showed the head nurse how to use the phone and told her to use it as much as needed. Judging by my phone bill, they used it a bunch.

While I was setting up the cellphone, in comes the ARES guy. Typical ham nerd. Several LOUD HTs on the belt, ARES Tee shirt, ARES hat,

armband with "EMERGENCY" in big red letters, dragging all manner of radios, antennas, cords, power supplies and so on. An HT would have done fine, of course, since the repeater was only about 5 miles away. He sets this equipment up on a table, turns it on and LOUDLY and very officiously checks
in to the ARES emergency net. Then he hands the head nurse an ARRL message pad and tells her he is ready to handle any emergency traffic, just write it down. It was all we could do to stiffle snickers.

Anyway, the typically chatty net had been going on for about 15 minutes when the head nurse had had enough. She ran him and his radio out into the waiting room. No headphones, of course.

Meanwhile I wandered outside to listen to the net without bothering anyone in the ER. A highrise retirement home was without phones so I volunteered to drive over and stand by in case any of the residents needed any medical help. Boy! What a trip! Several of the residents were still awake. It was like being in a house filled with dozens of grandmothers :-) They cooked me breakfast, they found me something to read, they fixed me a couch to nap on (not that I got a chance with them wanting to chat.) In short, they treated me like a king! (or communal grandson :-) Meanwhile the HT was mostly off. They didn't want to listen to the noise and I figured any emergency traffic from that location would be outgoing.

To make a long story short, the hams chattered and handled "traffic", my cellphone handled the real emergencies (911 was rerouted to the atlanta operators), I was well-fed and all was well. The hospital administration learned a lesson and bought portable cellphones and power supplies for each wing and for each on-call doctor. Exactly the setup I recommended to them in a letter, as a matter of fact.

>Once the ARES, RACES or other amateur emergency groups
>get going, the emergency nets will be connected with each of the area
>Emergency Operations Centers and Incident Command posts involved.
>Assuming the local emergency group has its act together, the nets will
>be well-staffed with trained operators who will know what to do and
>where to route emergency messages.

Huge assumption.

We can talk about that if you'd like. I was both the Radiation Safety offficer and the communications officer for the Bradley County Emergency Agency in Tennessee for several years. We were in the EPZ for 2 nuclear plants, in the transportation emergency plan for Oak Ridge and in a tornado alley so our role was critical. Our director (and I) became so disgusted with trying to work with the ARES types who were so rigidly encased in tradition as to be worse than useless that he asked me to set up an independent amateur liason. That I did.

We recruited independent hams to serve, held classes on professional communications techniques taught by state dispatcher trainers, got as many chiefs as possible ham licenses and used federal money to buy ham

radios for the city and county police departments, the ambulance center, the Red Cross and a few other places. None of this BS traffic handling. Any official who was not a ham got one assigned who signed on and off and then handed the microphone to the official. Our high-site repeater had vastly better coverage than any public service ones so we figured prominently in any event outside the city limits.

Our agency got a special commendation two years in a row for our performance in the Sequoyah (nuclear plant) Combined Emergency Exercises. Our communications were given special mention.

The fact is, the old Cold War paradigm ARES seems bound to is dead. Not only for local emergencies but regional ones as well. From what I could tell, most of the traffic during Hugo was handled by one or two individuals working on their own. A bunch of hams from this area went down with a van full of equipment to try and help. They said the ARES effort was a comedy of errors. And what was it that made communications news in Miami last year? That's right, AT&T's cellular telephone trailers they brought in the next day or so after the hurricane.

As cellular expands and new services like Motorola's Iridium satellite service comes online, ham radio with its 50s vintage architecture becomes completely irrelevant for emergency service. While trunked radio and cellular becomes utilitarian and DSB and digital spread spectrum services loom on the near horizon, hams continue to argue about sophisticated technology like tone squelch. And Maurice, of course.

Wow.

You can piss'n'moan at me all you like, Alan, but killing the messenger doesn't change the fact that hams have been left in the dust for emergency communications.

Now back to the Morris debate.

John

2089. Re: Strange HAM interference

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-11 11:37:58 UTC
From: randy@cyphyn.UUCP
Message-ID: <1993Sep11.113758.27619@cyphyn.UUCP>
Source record: 276467

I may have followed up wrong, but I lost the original post...

If it's AM, the guy will be plainly understandable...altho maybe distorted
and will usually do a lot of strange chanting, and calling some guy called
"Skip Land" (some movie actor inthe movie 20,000 leagues under the sea),
and saying a whole lot a lot of dumb stuff.

If Ham, you'd more likly hear an interesting QSO...not so CB

If it's terribly distorted like a duck under a pillow, and very rare can you
make out any words...THAT is SSB....which Hams use a lot of....but so do
CBers ...with many CBers I've been a victem for, THEIR SSB is usually more
distorted than Ham SSB....so =somtimes= you can tell them apart that way.

Normal SSB will sound mostly 'mumpff werrr mumpff mpff' while the overdriven
kind will crackle and pop like, on each syllable.

If it's a Ham, somtimes the ARRL and or the Official Observers can exert
pressure.
If it's CB...well....

If they all have liecences , and transmit only on Amateur freq, and do not 'rebroadcast' the PD thru their rigs...(too easy to do with those silly extended range sets...better to have a scanner separate really)....and do not say anything that could be viewed as giving out PD info of ongoing events then it would be ok....I'm sure others will add or modify this.

However....the real reliable range of those sets (vhf or uhf) is quite limited, unless thru a repeater, and very few repeater groups will want a nite after nite net on for the duration of time such watch groups would need. So be ready for that. ok?

Idea....set up several cars at good spots to relay info from small group to small groups when info has to be passed more than a few 1000's feet. Make sure the PD knows you are doing the watch and which cars will be where, visual ID info of the cars......with Stalking Laws now appearing, just sitting in yer car with a 2 way radio can be....hard to explain. The short range just indicated is the RELIABLE...not iffy range, for HT type radio-to-radio with the typical rubber ducky antennas.

You'd also want to pick a freq that is not bombed by qrm from other sources, and not on a simplex freq that has regular use by others... ie...don't use 146.52 !

Oh...one more thing....you can't use code words or such....FCC rule: can't conceal the meaning of a message....and I don't think you want to use the Ten four code either.

Wish ya luck...let us know how it goes.

As an experiment, I once temporarily set up a parallel info-hams gateway
here so that each incoming posting had to pass the spelling checker
with fewer than two errors or it would be returned to the sender.

Had I enabled that code, nothing would have been posted for days at a time.

I tell you, it's a sad state of affairs when even the people who pride
themselves on being trained experienced communicators can't handle English.
And this in a medium which allows you to edit and revise what you say
before posting it!
- Brian

Yeah but it was funny, and true too. I was slumming on the particular
machine John described when this happened and heard the whole thing.
The exasperation in the 911 operator's voice was extreme.

>In a major communications emergency, however, I think the ham frequencies
>would normally be a better bet. The cellular system, like the rest of
>the telephone system, will be jammed with calls. The 911 line will be

>where to route emergency messages.

The one area where amateur radio excels over the cellphone is when
you need to update a number of places at once. The party line nature
of amateur radio serves this purpose better than the one on one of
the cellphone. Weather nets are a good example. Passing traffic is
generally very inefficient on amateur nets because of the party line
effect, but the party line is great for soliciting and collecting
spotter reports.

2100. Finding Motorola SMT in small quantity

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-11 16:58:36 UTC
From: rick@cs.sunysb.edu
Message-ID: <26t03s$716@newsserv.cs.sunysb.edu>
Source record: 276472
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc,sci.electronics

Designing and building RF circuits is certainly a lot of fun, but it borders on the impossible to get modern parts in small quantity! Does anyone know of a source for small quantities of the Motorola MMBR901L (SMT version of the MRF901)? Active seems to carry some reasonable second choices to the MMBR901L, eg MMBR9411, but they say Moto will not let them break a rail to sell part in small quantity. Should I starting thinking Philips, Siemens, Mitsubishi (off shore) for RF parts, or is there a way to get Motorola in small quantities? I want to stay with SMT, since it is a bit of a drag to have to drill all the holes needed for through-hole when using home grown PCBs :-)

BTW, anyone know whether the 2N4416(A) is available in SMT?

This has been the source of some debate the past year. Actually, radio jurisdiction, both amateur and other is under the National Science Foundation, though frequecny coordination is still under control on the US Navy (for US stations of course). The FCC and ARRL have refused to get involved in radio disputes, and have left them for the NSF to resolve.

When I bought my home 15 years ago, I wrote an attachment to the
closing papers. It stated that the sale was contingent on no restrictions
to the installation and use of a 70 foot high amateur tower and
antenna system.
The title insurance company, bank, and broker made a LOT of noise,
but I have the house and the tower and it's all perfectly legal.

>I have a sackfull.
>
>John

So do I, John, such as: When Hurricane Iniki hit the Hawaiian Islands
with wind gusts over 180 mph, communications with the island of Kauai
were completely severed for 2 days except for Ham radio; both 2 meters
and HF were used for ALL traffic including first aid requests, food
requests, building material supplies, logistical support, etc. The
Kauai mayor used 2 meters as the `hotline' between her island and
the governor's office.

And I am sure that the hams who participate in the tornado watch program
on your side of the Pacific have `a sackfull' of stories.

This thread has already passed this way a couple months ago. The question
to be answered is why you are so hostile towards hams who try to help
others?

Bob... if you are just looking for Mac clip art... I ma sure that the usual Mac ftp sites... like sumex-aim and others have areas for art. But if you are looking for ham radio art... I'd like to know where it is as well. If someone knows where ham radio clip can be located, I'll include it in my next release of Mac Ham Radio info.

Satellite, shortwave and other electronic media news from Radio Sweden.

This week's bulletin was written by George Wood.

Packet Radio BID SCDX2184

All times UTC unless otherwise noted.

NORDIC MEDIA NEWS:

TV 5 NORDIC--Satellite broadcasting has become profitable here in
Scandinavia. All three Swedish commercial satellite broadcasters, TV3, TV4,
and TV5 Nordic, are now showing profits. For TV5, this is a considerable
change. Just two years ago the former owner had to sell three-quarters of the
channel to a Luxembourg-based American company.

We called TV5 Nordic's Managing Director, Hans von Schreeb. What have you
done to turn things around?

HANS VON SCHREEB: Mainly knowledge. During at least the latter part of the
80's you could raise money in Sweden for ventures such as TV. But there was
no previous knowledge of commercial television. So through a new major
ownership we have gained knowledge in the sense that we have the U.S.
experience and also experience from Denmark and Norway. That's the experience
that we are now taking advantage of.

RADIO SWEDEN: It seems like you're always the little brother of Swedish
broadcasters. The newspapers and magazines usually put you on a separate page
from the other 4 channels, or they put you into a little box with the foreign
channels. Does that hurt?

HVS: Well, it hurts mentally, in the sense that fro the beginning we were not
even in the papers. While our competitors, for example TV4, was in the papers
even before they began broadcasting. Now in our case, we are getting our

decent share, even in the papers. So, I think that
within the forthcoming months you will see the necessary changes. But already now we have an average of about 60 or 70 percent of the viewers that TV3 has, and this means that we should be in the papers in the same way as our competitors. I think you will see that change.

RS: So they're taking you more seriously now?

HVS: Well, yess. We have at least, on the average, between 500,000 and 700,000 viewers who watch us every night, and they should have a proper chance to gt decent information.

RS: The American company that owns you also owns Norway's TV Norge and Denmark's TV2. Has this helped you--are you co-ordinating any programming or anything like that?

HVS: We will. It also helps us with experience, what kind of format works, how can you make local productions in a Scandinavian environment, how can you cut costs, etc. This also gives us an opportunity to choose computer systems that are already used in Denmark and Norway. Yes this helps.

RS: You've had a fight with France's TV5 over the very name itself. Have you finally resolved that problem?

HVS: The Swedish Supreme Court has ruled that we have the right to use the name TV5 Nordic until the case is finally resolved. Hopefully it will be resolved, and I would really like to settle outside of court, because I don't think we gain anything from this fight. The name TV5 is used in various places in Europe. We're also two very different stations, in two different languages. One is a government-owned public service channel, the other is an internationally-owned commercial TV service. I don't think we have hurt the French in any deep way. So I don't think this fight is especially rational.

RS: What about future plans? You have a lot of American programming, is that going to continue?

HVS: Well yes, it will continue at the same level as long as our viewers like it. I think the main thing is to get more local production, to give a Swedish flavor to it. And that's what we're aiming for now. We've gone through our graphic program, which is totally different from TV3 and TV4, and you'll also see local production that's different.

RS: One thing that you don't have is news.

HVS: We will have news in one form or another. Our news will give an opportunity for our viewers to be informed while watching TV5 Nordic during the evening. So it will be short news stories. You'll see that rather soon.

EUROPEAN MEDIA NEWS:

ASTRA--Right on time on July 22nd, Discovery and its companion, the oldies TV and film channel Bravo, showed up on the new Astra 1C satellite.

Discovery is on Astra transponder 41, Bravo on 42. Both are soft-scrambling in videocrypt, which means anyone with a decoder can watch, without a smart card. That's just as well, since the cards for the Sky Multi-Channel package, which is to include Discovery and Bravo, go into effect on September 1st.

BSkyB has extended the discount offer for its Multi-Channels package until August 31st, the date before the new package goes into effect. This could indicate that they haven't received as many subscriptions as they had hoped. On the other hand, BSkyB may have intended to have August 31st as the final date the entire time, and the original July 31st target may have been a marketing ploy to encourage early subscriptions.

When the Children's Channel signs off transponder 35, there's now a sign from Astra saying the Family Channel will be using that transponder, which confirms our report of two weeks ago.

On August 1st Bravo switched to a new schedule between noon and midnight British time, so there's room for the Adult Channel to make its reported move from transponder 26. But that hasn't happened yet.

There's also some very interesting speculation in "Sky Guide". Right now TV Asia is using the Nickolodeon transponder, number 46, between 18:00 and 06:00 hrs UTC. But they'll have to move when the Nick at Nite service starts there. When the Adult Channel moves from transponder 26, and British Sky Broadcasting starts its multi-channel package, BSkyB might also close Sky Movies Gold on that transponder. That would allow TV Asia to expand its operation on transponder 26 to 24 hours a day. ("Sky Guide")

Otherwise, the big news from Astra is that the company has now decided to launch a sixth satellite, Astra 1F, scheduled to go into orbit in 1996. Like Astra 1E, due for launch in early 1995, 1F will be dedicated to digital radio and television. 1E will operate in the 11.7 to 12.1 GHz range, while 1F will cover between 12.1 and 12.5 GHz. (SES)

VIRGIN--Virgin 1215 made its return to Astra July 23rd at 09:00 hrs UTC. They're using 7.38 and 7.56 MHz on the Sky News transponder. So far both channels are mono, but the service will be stereo soon. The country music station QCMR, which had been on one of those channels, has moved to the Sky Sports transponder, 7.38 MHz. (James Robinson)

WORLD RADIO NETWORK--The long-awaited relay from the World Radio Network of National Public Radio from the United States began on July 20th. "Morning Edition" is being carried for an hour at 13:00 hrs UTC, and there's two hours of "All Things Considered" at 21:30 hrs. But the service is not on Astra. They're using the World Radio Network's Eutelsat II-F1 outlet, on the MBC transponder, 11.554 GHz, audio 7.74 MHz. We called up Karl Miosga at the World Radio Network and asked why?

KARL MIOSGA: We're using this as a test transmission, a temporary service, to check out the circuit from Washington to London and iron out any little bugs that we may have. But also for prospecgive radio stations and cable companies who might be interested in relaying live programs from NPR.

RADIO SWEDEN: So when will you be going to Astra?

KM: We're aiming to start our Astra service in September, with test transmissions beginning one or two weeks before, middle of August say. At the moment, Astra 1C looks very likely as to where our home would be, but at this point we can't make a definative announcement.

RS: Right now the NPR programming is sharing your channel with your regular programming from Vatican Radio in many languages and Radio Canada International in Russian. When you move to Astra, it will be a completely new channel. Are you lining up other English language broadcasters as well?

KM: Yes. It will be a mixed bag again, but all in English, of course. And mostly live. We'll have a couple of surprises, I can't give you any exact details at this point, but it will be very similar to the tests we did last year.

RS: Right now you have the two programs from NPR, "Morning Edition" and "All Things Considered". Are you planning on having other programs from National Public Radio as well?

KM: That is correct. We'll be taking "Talk of the Nation", which is their live telephone radio show, which happens in the evening our time. And it will also be possible for anyone across Europe to take part in that. But that will be one of the extra programs that will feature in the Astra line-up.

ARIANE--Ariane has had another launch after Astra 1C. On July 22nd the Western European rocket put satellites for Spain and India into orbit.

Spain's Hispasat 1B is the follow-up to Hispasat 1A, and will be placed alongside it at 30 degrees West. It should be in place in about 10 days, and will begin official operation in October. Hispasat transmits to both Spain and Latin America, with both Ku-band DBS and Fixed Satellite Service transponders. But there have been problems with the 1A satellite. 1B should make a big difference.

The other satellite just launched into orbit is India's Insat 2B. It's India's second indigenously-built satellite, and will be placed at 93.5 degrees East. It's expected to be declared operational by early September. It will complement Insat 2A, which is at 74 degrees East. (Reuters, "World Satellite Almanac")

India's state-owned television is to launch four satellite-based channels on August 15th, India's Independence Day, to win back audience from foreign networks. The new channels will carry sports, entertainment, news, and music programming, apparently from Insat 2A. A fifth channel is to begin on Insat 2B. (BBC Monitoring)

ASIAN MEDIA NEWS:

SKY AND STAR--Europe's biggest satellite broadcaster has bought a controlling interest in Asia's biggest satellite broadcaster. Rupert Murdoch's News Corporation has purchased 63.6 percent of Hong Kong's Star Televison, which currently transmits 6 channels: news from BBC World Service Television, sports, general entertainment, and channels in Mandarin and Hindi.

News Corporation owns British Sky Broadcasting, which has 6 channels on Astra, and is behind the new Astra multi-channel package. News Corporation also owns Fox Television and 20th Century Films in the United States.

Less than a month ago Murdoch was thwarted in his effort to buy 22 percent of Hong Kong's TVB, which has a vast library of Chinese programming, in an effort to create a competitor to Star Television. That deal got stopped by the Hong Kong government, and TVB has since lined up with CNN, Home Box Office, ESPN, and the Australian Broadcasting Corporation. But they'll be broadcasting on Indonesia's Palapa B2P satellite, whose signal barely reaches the main Chinese-language markets of China, Hong Kong, and Taiwan.

Star, on the other hand, reaches 11 million homes from Japan to the Middle East on Asiasat-1. Asiasat-2, with more channels, is due to be launched next year. Star is expecting that BSkyB's expertise will help it launch several pay-TV channels in October. The deal follows an attempt by Pearson, owners of the "Financial Times" to buy control of Star-TV. Analysts have described the merger of Sky and Star as a marriage made in heaven. (AP, Reuters, "International Herald Tribune", "The Economist")

BUSINESS NEWS CHANNEL--Japan's Mitsui company has reached agreement with NBC in the United States and Pearson plc, owner of the "Financial Times", to launch a 24 hour financial and business satellite channel for Asia. Star-TV is also involved, so presumeably the new channel would broadcast from Asiasat-1. (Kyodo News Agency via BBC Monitoring)

SHORTWAVE:

ALBANIA--Radio Tirana is restructuring, cutting back from 23 languages, to first 12 and then 8 services. Radio Tirana is now broadcasting in English: 01:30-02:00 hrs and 02:30-02:45 hrs on 9580 and 11840 kHz; 14:30-15:00 hrs on 7155 and 9760 kHz; and 22:00-22:15 hrs on 1395; 9760, and 11815 kHz. (BBC Monitoring)

LIBERIA--The pro-Nigerian-ECOMOG Radio ELBC in Monrovia continues to broadcast on 7275 kHz, despite reports that it went off the air in May. The pro-Charles Taylor Radio ELBC based in Gbarnga also continues to broadcast. (BBC Monitoring)

LITHUANIA--Radiocentras, the private station in Lithuania, has been testing in slow-speed morse code on 9400 kHz. BBC Monitoring says they are announcing an output power of 5 kW, and it certainly has a strong signal here in Stockholm. The part we recorded was in English, and gave the address for reception reports.

SOMALIA--A new station broadcasting in Somali and calling itself Radio Mogadishu has been heard at 15:00 hrs on 6870 kHz. This station supports General Mohammed Farah Aydid and opposes the United Nations presence in Somalia. It uses the same signature tune as used by Ali Mahdi Muhammad's Radio Mogadishu, which has been heard on 6863 and 6866 kHz. (BBC Monitoring)

UNOFFICIAL RADIO--The Voice of Independent Kurdistan, which supports the Kurdish Workers Party, the PKK, has been heard at 14:00 hrs on 7330 kHz. It was last heard in March on 7030 kHz. (BBC Monitoring) The PKK is fighting for

a Turkish homeland in Turkey, and has recently attacked tourist targets in Turkey.

Sweden Calling DXers is the world's oldest radio program for shortwave listeners. Radio Sweden has presented this round-up of radio news, features, and interviews on Tuesdays since 1948.

Radio Sweden broadcasts in English:

Europe and Africa:

15:00 hrs on 1179 khz (weekdays only)
16:15 hrs on 1179 and 6065 kHz
17:30 hrs on 1179, 6065, and 9645 kHz
20:30 hrs on 1179, 6065 and 9655 kHz
21:30 hrs on 1179 and 6065 khz, and
22:30 hrs on 1179 and 6065 kHz

Middle East and East Africa:

15:00 hrs on 15190 kHz and
17:30 hrs on 15270 kHz

Asia and the Pacific:

12:30 hrs on 15240 and 21500 kHz
22:30 hrs on 11910 kHz and
01:00 hrs on 9695 and 11820 kHz

North America:

15:00 hrs on 15240 and 21500 kHz and
02:00 hrs on 9695 and 11705 kHz

South America:

00:00 hrs on 9695 kHz

The broadcasts at 12:30, 16:15, 17:30, 20:30 (weekends only), 21:30, and 22:30 hrs are also relayed to Europe by satellite:

Astra 1B (19.2 degrees East) transponder 26 (Sky Movies Gold/TV Asia/Adult Channel) at 11.597 GHz, audio subcarrier at 7.74 MHz,

Tele-X (5 degrees East) (TV4 transponder) at 12.207 GHz, audio subcarrier 7.38 MHz.

Contributions can be sent to DX Editor George Wood by fax to +1-707-468-1460 (beginning August 13), from Internet to 70247.3516@compuserve.com, or from MCI Mail or CompuServe to the CompuServe mailbox 70247,3516.

Reports can also be sent to:

Radio Sweden
S-105 10 Stockholm
Sweden

Contributions should be NEWS about electronic media--from shortwave to satellites--and not loggings of information already available from sources such as the "World Radio TV Handbook". Clubs and DX publications may reprint material as long as MediaScan/Sweden Calling DXers and the original contributor are acknowledged, with the exception of items from BBC Monitoring, which are copyright.

We welcome comments and suggestions about the electronic edition, Sweden Calling DXers, and our programs in general.

Thanks to this week's contributors Good Listening!

W5IU Provides Agenda For AMSAT-NA Space Symposium 7-10 OCT

PRELIMINARY AGENDA
1993 AMSAT-NA ANNUAL MEETING
AND SPACE SYMPOSIUM

October 7, 8, 9, & 10, 1993
La Quinta Inn - Arlington, Texas

Thursday, October 7th

All Day - Leave La Quinta Inn at 09:00
Electronic Surplus Tour of the Fort Worth/Dallas Metroplex
- Transportation & Tour Guide Provided

Friday, October 8th, Morning -

Registration Opens -
Antenna Test Range Adjacent To Hotel - WA5VJB, Kent Britain

Friday, October 8th, Afternoon -

ARRL/AMSAT Educational Workshop - WA1STO, Rosalie White
(Runs Concurrent with technical papers)

Technical Papers:

"Status of SEDSAT-1" - KD4ETA, Dennis Wingo
"UNAMSAT-1 Experimental Module - TSFR" - XE1TU, David Liberman
"IT-AMSAT-1 Status" - I2KBD, Alberto Zagni
"High-Resolution Weather Satellites" - N5ITU, Jeff Wallach
"Hubble Space Telescope Service Mission Preview" - N8FGV, Dan
Schultz

Friday, October 8th, Evening - on your own for dinner and entertainment.
Local assistance provided.

Saturday, October 9th, Morning -

"Welcome To The 1993 Space Symposium and AMSAT-NA Annual Meeting"
W3XO, Bill Tynan - AMSAT-NA President

"The AMSAT Phase 3D Spacecraft"
WD4FAB, Dick Jansson - AMSAT-NA VP of Engineering

"The AMSAT Phase 3D Electronics"
DB2OS, Peter Guelzow - AMSAT-DL

"AMSAT Phase 3D Antenna Design Review" - WA4NFY, Stan Wood

"How GPS Receivers Work"
"AMSAT Phase 3D GPS and Master Oscillator Package"
W3IWI, Tom Clark - AMSAT-NA President Emeritus

"The Shuttle Amateur Radio Experiment - Current Status and Future Visions"
KA3HDO, Frank Bauer - AMSAT-NA VP, Manned Space
"SAREX Shuttle Mission Operations - From A Payload's Point Of View"
W5DID, Lou McFadin

Saturday, October 9th, Afternoon -

"Managing OSCAR-13"
G3RUH, James Miller

"Development Of A Portable Mode S Ground Station"
KA9LNV, Ed Krome

"DOVE Progress Report and Future Operation" - WD0E, Jim White

"Some 20-20 Hindsight: A Slightly Different View Of WEBERSAT"
KB7KCL, Bob Argyle

"DSP-93: The Joint DSP Program (TAPR/AMSAT)"
N5BRG, Bob Stricklin

"Digital Processing Of Weak Signals Buried In Noise"
AA7FV, Darrel Emerson

"AMSAT-NA Operations Report - 1993"
W5IU, Keith Pugh - AMSAT-NA VP of Operations

Meet Your AMSAT-NA Board of Directors

Saturday, October 9th, Evening -

Happy Hour

Dinner Banquet, Program, Recognition Awards and
Prize Drawings

Sunday, October 10th, Morning -

Field Operations Breakfast

AMSAT-NA Board of Directors Meeting
(Open Meeting, Run Concurrent with Technical Papers)

Technical Papers -

"VOXSAT - VOice eXperiment SATellite"
LW2DTZ, Gustavo Carpignano - AMSAT-LU VP

"Tools For The Digital Satellites - Part 1, The Downlink"
WA4SXM, Gould Smith

"Implementing The PACSAT Broadcast Protocol On
Terrestrial Networks" - WA0PTV, John Hansen

"Non-Messaging Uses Of The Store-and-Forward Satellites -
The Integrated Power Corporation Nusa Penida Project"
WD3Q, Eric Rosenberg

"S Band For The Beginner" - KA9LNV, Ed Krome

"Using Metal Booms To Support AMSAT Antennas"
WA5VJB, Kent Britain

"Microsat Ground Stations" - WB1HBU, Eric Cottrell

"Birth Of A Satellite Education Program In Sweden"
SM2UHI, Borje Rautio
"Experimental Determination Of Properties Of The
RS-10 Mode A Transponder" - KE3HP, Walter Daniel

Sunday, October 10th, Noon - End of Symposium - Board Meeting Continues

[The AMSAT News Service (ANS) would like to thank Keith Pugh (W5IU) for this bulletin item. There is still time to register for the AMSAT-NA Symposium. For more information about the Symposium, contact AMSAT-NA Headquarters at (301) 589-6062.]

AO-13 ZRO TESTS RETURN!

HR AMSAT NEWS SERVICE BULLETIN 254.02 FROM AMSAT HQ
SILVER SPRING, MD SEPTEMBER 11, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-254.02

ZRO Tests Return To AO-13

The ZRO Memorial Technical Achievement Award Program, or just "ZRO Test" has a new schedule for September and October '93 via AMSAT-OSCAR-13. This activity is a test of operating skill and equipment performance. Due to scheduling difficulties only three tests have been set up for this round so be sure to mark the test dates and times on your calendar.

During a typical ZRO run, a control station will send numeric code groups using CW at 10 words-per-minute. At the beginning of the run, uplink power from the control station is set to match the general beacon downlink strength. This is level "zero." The control operator will send and repeat a random five-digit number, then lower his uplink power by 3 dB (half power) and repeat the procedure with a new random number. This will continue to a level 30 dB below the beacon (level "A").

A participating listener monitors the downlink signals until he can no longer copy the numbers. Those who can hear the beacon will qualify for the basic award by copying the code group heard at level "zero". The challenge is to improve home-station performance to a point where the lower-level downlink signals can be copied (levels 6 through 9).

The following schedule of Mode "B" tests were chosen for convenient operating times and favorable squint angles. The tests can be heard on 145.840 MHz. Andy (WA5ZIB) will conduct all the tests. Mode "JL" tests will no longer occur due to the failure of AO-13's 70-cm transmitter. Ed (N5EM) will be back next year after he completes station calibrations necessary to insure accurate Mode "B" activity. His "JL" tests were greatly appreciated.

Sunday Sep. 26, 1993 at 0545 UTC
Saturday Oct. 2, 1993 at 1335 UTC
Monday Oct. 18, 1993 at 0430 UTC

Note that the dates and days are shown in "UTC", thus the first and third tests shown occur in the late evening hours for those in North America. For example, the October 18th UTC test is at 11:30 PM CDT Sunday night (the 17th). Any changes will be announced as soon as possible via the AMSAT HF and AO-13 Operations Nets.

ZRO brochures are available from WA5ZIB, Andy MacAllister, AMSAT VP of User Operations, 14714 Knightsway Drive, Houston, TX 77083 for an S.A.S.E. with two units of postage. The brochure characterizes test procedures, means for obtaining certificates and gives some historical background about the program. New brochures were not made for the current round of tests, but this announcement and a graphical presentation of the satellite's view during the tests will be provided along with the March 1993 version of the brochure.

All listener reports with date of test and numbers copied should be sent to WA5ZIB at the address above. A report will be returned verifying the level of accurate reception.

AMSAT OPS NET SCHEDULE

HR AMSAT NEWS SERVICE BULLETIN 254.03 FROM AMSAT HQ
SILVER SPRING, MD SEPTEMBER 11, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-254.03

Current AMSAT Operations Net Schedule For AO-13

AMSAT Operations Nets are planned for the following times. Mode-B Nets are conducted on AO-13 on a downlink frequency of 145.950 MHz. If, at the start of the OPS Net, the frequency of 145.950 MHz is being used for a QSO, OPS Net enthusiasts are asked to move to the alternate frequency of 145.955 MHz.

Date UTC Mode Phs NCS Alt NCS

18-Sep-93 1515 B 96 N7NQM W5IU
2-Oct-93 1400 B 160 WA5ZIB WJ9F
9-Oct-93 1500 B 101 W9ODI N7NQM

Any stations with information on current events would be most welcomed.
Also, those interested in discussing technical issues or who have questions
about any particular aspect of OSCAR statellite operations, are encouraged
to join the OPS Nets. In the unlikely event that either the Net Control
Station (NCS) or the alternate do not call on frequency, any participant is
invited to act as the NCS.

****

Slow Scan Television on AO-13

SSTV sessions will be held on immediately after the OPS Nets a downlink
on a Mode-B downlink frequency 145.960 MHz.

bulletins are also posted to INTERNET, ANS bulletins, Packet, PACSATs, etc., and can also
be found in many international newsletters. [G3RUH/DB2OS/VK5AGR]

AO-16: Operating normally. SATGATE operations have moved from LO-19 (LUSAT)
to AO-16 (PACSAT). As KI6QE indicated when the move was made, the number
of files involved is quite small, so it is still possible to keep track of
everything on this satellite even with checking a few times a week. [WH6I]

UO-22: Operating normally. There were a few good images last week. [WH6I]

KO-23: Operating normally. [WH6I]

FO-20: N0NBH reports that FO-20 continues to operate normally after last week's on-board computer resets. [N0NBH]

UNAMSAT-1: The Mexican MICROSAT is scheduled for launch late this year on a refurbished Soviet ICBM designed to carry satellites. So far Program Manager XE1TU does not have all the final keplerian elements of the intended orbit. However, the known parameters are as follows:
Orbital Inclination = 73 degrees
Altitude = 730 KM
Orbital Eccentricity = 0.00000000
The satellite will separate from the rocket with no spin. All transmitters will be silent at separation and for a period of at least 1 hour. The VHF receive antenna and the two halves of the canted dipole for 40.997 MHz will be collapsed and then they will be deployed 3 minutes after separation. [XE1TU]

RS-10: HB9RHV is quite active on RS-10 and looks forward to contacts and schedules for those who would like to make a DX contact. [HB9RHV]

UO-11: Controllers at the UoSAT Control Centre at the University of Surrey are requesting the help of the amateur radio community around the world in collecting information and data from UOSAT-OSCAR-11. The Forth Diary Operating system aboard UO-11 has crashed within the past 24 hours. This has rendered the spacecraft in a non-nominal operating state. The collection of information and data related to the operational condition of the spacecraft over the next several days will be essential in helping the controllers to understand the spacecraft's current condition. Therefore the UoSAT command team is asking radio amateurs around the world to monitor the spacecraft and relay any reception reports and or telemetry data collected from the spacecraft to them via G0SYX @ UO-22, G0SYX @ KO-23 or via the INTERNET address: D.Loughmiller@ee.surrey.ac.uk UOSAT-OSCAR-11 operates on a 2M frequency of 145.825 MHz and on a 70 cm frequency of 435.027 Mhz. Controllers are most interested in which beacon is active at the time of any given observation and whether the signal contains data or not. Any telemetry data collected would be of particular interest to the controllers as well. Any observations provided by the amateur community will be most appreciated. UoSAT controllers will issue subsequent bulletins about the status of the UoSAT-OSCAR-11 spacecraft as the situation develops. [KO5I/G0SYX]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ W0LJF.#NECO.CO.USA.NOAM. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

/EX

2116. Fox Hunt, 18 SEP in Ann Arbor area

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-12 03:56:07 UTC
From: tim@umcc.umcc.umich.edu
Message-ID: <26u6kn$pav@umcc.umcc.umich.edu>
Source record: 276491

The Radio Active Communications Club of Southeastern Michigan
(RACC) will be holding another one of our 'fox hunts' on Saturday, 18
September.

This will be a two-meter band fox hunt taking place in the
Washtenaw County area. The starting time will be Noon, and the starting
point is a small Washtenaw County park (it doesn't seem to have a name!)
located on the SW corner of the intersection of Prospect and Cherry Hill
Roads, in Superior Township. This park is approximately 5 miles NE o
Prospect Road. Continue North on Prospect for about 4 miles, and
the park will be on your left, right at Cherry Hill Road.

Talk-in will be on 224.580/R and 145.150/R. Each team must
have a minimum of two people, and be prepared to do some driving, then
walking before you find the beacon. Other rules will be explained in
person prior to the start of the hunt.

Unfortunately, there aren't any restaurants in the vicinity of
the starting point, so we won't be meeting up for breakfast first.
However, the park does have a few picnic tables and BBQ grills...

For further information, check into the RACC Monday Night Net at
8PM on the 224.580 N8IQX Repeater in Inkster, with a simplex link to
In case of bad weather on the 18th, be sure to check the talk-in
repeaters for last-minute information.

This RACC Hunt is being put together by Darrell, N8NQN & Tim,
KA8VIR.

Happy Hunting, Suckers!

Does anybody have the number for the AA7BQ bbs? I lost it.

The real reason I want it is because I think it had a repeater list
online. If anybody knows where I can get an Arizona repeater list
electronically that would be great too...

>records of your first test. Asking an examiner to run with a photocopy of
>the original license is strictly speaking, illegal.

Funny thing about that... the top of the 610 I have here says "Attach the original license OR PHOTOCOPY here" [emphasis mine].
Since 1967 when I got my Novice, the FCC has been accepting photocopies.
That's why I still have my original Novice license, coated in plastic.
So why is it that FCC will accept it without a second thought, while VEs have to have the original? Most importantly, what makes it illegal?
So far as I can see, as long as the signatures match relatively well and there's no change of address requested, there couldn't be a problem. But then, I'm not a VE; you might know something I don't. Please pass that along.

The relevant thing about the speaker is that it's the design load
of the receiver audio output stage. These are large signal amplifiers
which are rarely operated class A. The typical maximum spec is 3 watts
output at 10% THD. Now that's a 4.89 volt signal with 10% distortion,
or a 4.4 volt signal with .49 volt distortion products. So, no I don't
expect a 5 volt undistorted signal. I would expect that a 500mV signal,
18.88 db down, would be there, and probably with no more than 1% distortion.
A 50mV signal would be 38.89 db down and likely present too. But much
below that I'd expect the signal to be lost in the receiver generated
noise and in the non-linear range of the output amplifier due to
crossover distortion et al. If you pick up the signal at the top of the
volume control, after the preamp but before the power amp, your dynamic
range could be somewhat better, though you'd be working with about 30 db
less signal. In fact, it's unusual to find a product detector with a
linear range exceeding 50 db in commercial amateur receivers.

>>AGC or MGC *must* be used to prevent overloading receivers...

Yes, by controlling the level of the signal of interest to fall within
the dynamic range of the receiver detector and audio output stages.

>>That gain control at IF will push your weak signal below the
>>receiver noise floor...

>be heard by our human ears because of the strong interfering signal.

Perhaps, but receiver gain distribution is done in such a way as to
distribute the receiver's internal noise generation so that a normal
signal will override it sufficiently to maintain a reasonable S/N
when gain control is active. Most receivers operate with an internal
noise level just below that of atmospheric for HF receivers. When
you decrease incoming signal levels by reducing RF and IF gain, you
wind up with a signal that can no longer override the internally
generated noise and distortion of the detector and AF stages. They
aren't designed for ultimate S/N or dynamic range because they
don't have to be. They follow gain controlled stages that set the
S/N and dynamic range of the receiver for them.

>>I think you're expecting too much from audio DSP...

>you imagine giving out a 500 RST?

Ask yourself what is the dynamic range of the POTS.

>(I admit that anyone who would use state of the art DSP systems
>to copy an obsolete means of communications must be slightly bonkers.)

To maximize the utility of audio DSP, you need a receiver that has
a high dynamic range without gain control, and one that uses stages
which are ultralinear and that have had considerable attention paid
in order to optimize the S/N of each stage. Ordinary commercial ham
receivers aren't this way. They attempt to set receiver S/N by paying
attention to the first couple of stages. They are designed to work with
less than 50 db of dynamic range at the speaker output. That's done
mainly through an AGC system that constrains output to the detector
and post detector stages to a very small dynamic range, often on the
order of 2 db for a 20 db signal level change. That's perfectly fine
when dealing with communications quality audio intended for human ears
through a speaker. But it's not at all satisfactory for the usage you
envision.

To get 90 db of dynamic range, the receiver's audio stages must work linearly over a range of roughly 32,000:1. That's barely approachable by the very best HiFi equipment, the so called "digital compatable" systems. And even they don't really expect to reproduce the low end of the dynamic range because no one can hear it due to the nominal 62 db SPL of an ordinary room. You certainly won't find that in any commercial amateur receiver. Some homebrew DC designs can come close, but then you have an unfilterable image that aliases into your output. Even DSP can't deal with that.

And highly redundant. Hereabouts, Oak Park and Berwyn share a 2-mile
border, but are served by different switching offices. I am assured by
switching engineers hereabouts that, should their direct connection go down,
if necessary they can route your call via New York, Florida, California and
Alaska to get it across the street from Berwyn to Oak Park; there's that much
redundancy. Does YOUR communication method have that quality?

>Why should all of our data have to bottleneck at a traffic net where maybe
>only 8-10 people check in regularly using cw? Please!

For the same reason a repeater can be tied up for an 8-10 person net.
For the same reason a frequency can be tied up by two operators in QSO.
For the reason that they have the right to use those frequencies in the mode
they're using.
Anyone who thinks data throughput is the purpose of amateur radio hasn't
read the first part of Part 97.
Amateurs as a group used to be people who found creative and innovative
ways around communications problems. Now it appears the group has turned to
whining that they're not getting their way with their chosen mode of
operation, and demanding that everyone else get out of their way.

Remember those words of yours, "MASS marketing". Expand your markets, create a need and then fill it. So...
There is now a codeless technician license. This is probably due at least in part to the fact that Ed Juge, W5TOO, Radio Shack bigwig in charge of finding new markets and filling their needs, was on the committee which recommended the codeless technician license. (Wonder how he voted? :-)

>white true noise energy SNR in a 100 hz CW bandwidth at the CW note
>frequency may be more like -60 or 65 or more db in some good receivers.

Don't confuse S/N with dynamic range. They're expressed in the same
units, but they aren't the same thing. The point is that the product
detectors and audio stages of commercial amateur receivers don't
have a large dynamic range *because they don't have to*, and it
costs a few dollars per unit to add this unnecessary ability.
So regardless of the possible S/N improvement you could theoretically
get by narrow filtering of the audio, you don't have the dynamic
range in the incoming signal to the DSP to allow you to do it.
If you use a DC receiver with a very high dynamic range mixer,
well then it may be a different story. But then you have the alias
component you can't remove. If you try a phasing detector to remove
that component, you can't build one that has more than about 40-50
db of suppression, so you're back in the same boat.

Look, I'm assuming ordinary commercial amateur radios with ordinary
audio DSP boxes that plug into the radio. That's the amateur reality.
If we design a special receiver, and feed it into a special DSP,
results can be somewhat better. However, SOTA in commercial analog
audio is only approaching 90 db in the very best designs. That's
why CDs don't sound much better than good analog sources. The
digits can do it, but the analog amplifier stages can't. And it's
all moot anyway with speakers with 3-5% distortion and SPL ranges
from the 62 db SPL of a quiet room to the 120-130 db SPL of the
threshold of pain. Dynamic range just doesn't need to exceed

about 60-70 db. In comm receivers, it rarely needs to exceed
20-30 db, so those stages are rarely designed to do better than
that.

(MRL) Manuel Rodriguez Lanza. Equipment: Panasonic DR-31 and
Sony ICF-2001 with 65 meters LW antenna oriented NE-SW.
Located on the roof of 11 floors building in the Metro-
politan Area of Caracas, Venezuela, South America.

The following logs were made with a Kenwood R-5000 receiver connected
to a 400 foot unterminated mini-beverage antenna strung south-to-
north approximately 7 feet above ground. My location is semi-rural
just outside the city limits of Davenport, IA. A key to common SWBC
DX abbreviations used in these loggings is attached at the end of
this file. Unless otherwise noted, all Latin American stations were
logged in Spanish, except for Brazilians which were in Portuguese.

- Don Moore

4712.4 BOLIVIA: Radio Abaroa 1017-1031 9/5 ballads to 1028 then OM
talk. Gave ID, but too much static to hear it clearly, but
most likely them. "Tropical Band Survey" from DSWCI says this
station signs on at 1100 on Sundays, 1000 other days, which
means the Sunday s/on time is not necessarily always true.

4785 COLOMBIA: Ecos del Combeima 0958-1035 9/4 w/ frequent IDs &
mentions of the Super network. Into folk mx program
"Concierto Colombiano". Good signal. Reactivated yet again.
These guys have gone inactive and then reactivated at least a
dozen times in my 20+ years of DXing! Nice to have them back,
though. One of the best stations for Colombian mx. Strong
signals, too.

4795 BRAZIL: Rdif Aquidauna 0947-0958 9/4 w/ seemingly canned rel
pgm, ID w/ freqs @ 0956.

4845 COLOMBIA: CARACOL Bucaramanga 2349-0045 9/5-6 w/ futbol
coverage. Many mentions of Colombia. Believe Colombia vs
Uruguay in World Cup preliminaries. No ID, so presumed
reactivation of this station. Not // main CARACOL outlet on
5075. Poor. Still in w/ futbol an hour later at recheck.

4890 PAPUA NEW GUINEA: NBC Port Moresby 1106-1108 9/6 Presumed the
one w/ YL EE nx. Poor.

4899.87 PERU: UNID 1037-1105 9/6 w/ Peruvian folk mx, anmts. Very
professional sounding & several ads gave phone numbers, so
must be in a departmental capital or other main town.
Possibly mentioned the Depto de San Martin and the Rio Mayo
once. Believe there were several IDs, but nothing very clear.
Poor and quickly weakening.

4924.6 BOLIVIA: Radio San Miguel 9/6 1010-1035 w/ "Primer Informativo de San Miguel" ind-depth newscast. One item about a disagreement between Radio Pio Doce & local military authorities in Potosi. IDs as both Radio San Miguel and La Voz de la Selva. Surprisingly good signal - best I've ever heard them.

4945 BRAZIL: Radio Progreso, Porto Velho 0955-1022 w/ folk mx, IDs at 1000, 1008, mentioning 50 kw of power. Fair.

4953.6 PERU: Radio Cultural Amauta 1034-1041 9/5 Presumed the one w/ anmts, prayer, into rel mx. Stn is run by Peruvian Baptists. Poor w/ lots of static.

5000 UNID 1043-1101 9/5 Someone here w/ mix of tropical mx and EZL ballads, occ Span talk, but impossible to understand because of heavy cochannel WWV. No het at all, so perfectly on 5000 kHz. Perhaps a local MW station mixing w/ YVTO, Caracas, which was also hrd at the same time?

5995.2 PERU: Radio Melodia 0955-1002 9/5 OM ancr, possible ID, into Andean ballads. Very weak.

6576 KOREA, North: Radio Pyongyang 1125-1126 9/5 w/ talk on North Korea in EE. Fair.

~From: Don Moore <MOORE@TMU1.MCREST.EDU>
Organization: Teikyo Marycrest University
~Subject: Good Peruvian conditions; loggings

Some loggings made this morning. Peruvian reception was better than usual, so this evening (Friday) & tomorrow morning could be good times to go after Peruvians & probably Bolivians, too. Peruvians including Radio Melodia, 5995; Radio Oriente 6190; Radio Tropical 4935; Radio Atlantida 4790; Radio Tarma, 4775; Radio San Martin 4810; La Voz de la Selva 4825; and Radio Ancash 4990.9 were all heard with stronger than usual signals, in addition to the ones specifically logged below.

COLOMBIA: 4975 Ondas del Orteguaza 1022-1037 9/10 Fascinating program focusing on "medicina naturalista". Ads & promos for several clinics around Florencia that specialize in this & also gave daily schedule for a traveling doctor who would be visiting a number of outlying settlements over the next few weeks. Even gave some recipes for brewing one's own medicines, although most of the ingredients were not Spanish words I know - assumedly local plants. Fun listening! TODELAR anmts & station IDs at 1033 & into "Amanecer Campesino" program at 1035. Fair signal - a bit weaker than usual for these guys. (Don Moore)

MARTINIQUE: 8478.5 FUF 1113-1116 9/10 CW ID mkr. (Don Moore, IA)

PERU: 3194.2 Radio Luz y Vida 1057-1103 9/10 S/on w/ Peruvian anthem, then SP anmts too weak to make out much from. ID not heard, so presumed reception. Very poor. (Don Moore)

PERU: 4840 Radio Andahuaylas 1017-1021 9/10 w/ southern Peruvian huaynos, OM ID. Fair & no sign of Valera. (Don Moore)

PERU: 6203.7 Radio Cuzco 1040-1042 9/10 folk mx & Inca Kola ad. Fair (Don Moore)

PHILLIPINES: 8604 DZJ Bulacan Radio 9/8 1158-1202 w/ XW mkr. (Don Moore)

ODONNELLP@MAR65.MAR.ORA.FDA.GOV (Paul WB2OYC) writes:

>Radio Shack HTX-404 Reports ?
>
Rich asked:
>
>>Any one use the HTX-404 UHF handy that would like to offer some comments to
>>the net ?

Paul writes:

>Yes, I own one (202 also) and I do like them alot actually.

I also own both and like them.

Paul writes:

>but I have heard (don't
>know this to be accurate however) that some of the older Icom type batteries
>may work on it. I have not been able to prove that. Maybe someone else on
>the list knows for sure.

I only use ICOM and compatible battery packs on mine. The R/S ones sit on the
self for emergencies. Note that at 35ma (25ma with power saver) this guys
use about 1/6 the power on receive that any of my icom rigs use.

Paul writes:

>They both do real FM as well, which may be important to you if you're
>considering packet (I'm not a packateer so it doesn't matter to me).

That's one of my problems. I like the sound and feel of the HTX 202 but I have
a packet setup built around it. I'll probably have to buy another one.

Rich asked:

>>Can it transmit 430-440 as well ?

Yes, it's a keyboard mod that is documented in the manual.

Paul writes:

>Why the devil would you want to do that? I hope its not for possible
>simplex use! There are weak-signal guys, satellite up/downlinks, EME
>activity, etc, down there and they don't need FM or rackety packet types
>down there to screw them up. The answer is, I don't know; but I hope
>its NO!

What about using it overseas. The uhf band in most of the world is 430-440. By adding a key and a resistor it can be used as an uplink for satalite work. And their is an satelite that will work with FM. (Don't ask me which one it is though).

Could someone please tell me what health hazards, if any, are associated
with having a 20kw transmitter close to your property? Thanks for
any help.
John

2130. Help: checking audio output on R1000

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-12 19:26:38 UTC
From: white@csusys.ctstateu.edu
Message-ID: <1993Sep12.142638.1@csusys.ctstateu.edu>
Source record: 276497

How can I check the RECORD output of my Kenwood R1000 comm rcvr to see if the problem that I have been having with the HamComm interface is an audio output problem?
It works OK for listening, taping, etc (as does the external speaker line) but perhaps the output voltage or ???? is too low to get the HC interface to provide a signal > 150Hz....
Thanks
Harry
white@csusys.ctstateu.edu

2131. It's been over 24 hours, should I phone?

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-12 21:43:19 UTC

It's already been over 24 hours. Shouldn't I call the FCC and ask where my ticket is? :-)

But seriously, I just passed my Technician yesterday (Saturday), and now the long wait begins. I hope that some of the reports I have recently read of 12-13 weeks were just due to summer holidays.

My daughter (N1PNT, Michelle) passed the 5WPM code so she is now a tech+HF. I bought the family a Radio Shack HTX202 this week; I couldn't resist the sale price of $60 off, plus I got to use the catalog coupon for $5 off.

The sales guy convinced me that the TSP plan was a Good Idea, since a portable unit such as that was subject to breakage from dropping, kids, etc., and that RS would repair under these conditions. In checking the full sheet on the TSP, it said that repairs due to accidents were _not_ covered, and I wonder if anybody has had any experience with this?

I friend from work also gave me an ancient (well, 25-30 years old) Heathkit HW-100 transceiver. We cleaned out the dust, and some of the grunge, and got at least the receiver to work. We have not tried the transmitter yet, for a few reasons: 1) Before yesterday, no license for HF; 2) One of the "o-ring" type drive belts that connects the FINAL controls to the variable capacitors is broken; and 3) No manual. I am fairly certain that after this amount of time, the unit will need re-tuning, but I can't do much with it until I get ahold of the manual. I am going to a Hamfest next week, and hope to luck out that somebody there might be selling some, but in case not, does anybody know if Heath still sells manuals and/or parts for old equipment?

Well, 73's, and I hope to be on the 2M band in "6 to 8 weeks" :-)

SB DX @ ALLBBS $OPDX.127
Ohio/Penn DX Bulletin No. 127

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 127
BID: $OPDX.127
September 13, 1993
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DF4RD, DL7VEE & DXNL, ARRL, JI1MTF, ON4ACG, AD1C, KC1AG, N2HIG, K4CEF & Southeastern Cluster Group, WA4DAN, WD4NGB, K4MQG, KD7E and K8YSE for the following DX information.

DXAC VOTE. The results of the DX Advisory Committee's (DXAC) vote on Eritrea was released this past week. The Committee has unanimously recommended that Eritrea be reinstated to the DXCC Countries List. It had been deleted from the list on November 15, 1962. Committee members were convinced that Eritrea has reemerged as a sovereign nation. The vote for the recommended effective date is as follows:
9 votes - May 24, 1993 (The majority voted in favor of the official Independence Day.)
6 votes - May 24, 1991 (The date of liberation is 1991.)
1 vote - April 27, 1993 (The results of the Eritrean referendum were announced and their learder, Issaias Afweras, stated, "Eritrea is a sovereign country as of today.")

This recommendation will now go to the ARRL Awards Committee for consideration. Please do not send QSL cards to the DXCC desk for Eritrea until it has been officially added to the list, and a date for accepting cards has been announced.

FJ, ST. BARTHELEMY ISLAND. An international team of operators will be active from here for the CQ WW Phone Contest in October. The operators will be FJ5AB, FJ5BL, K2IBW and N2HIG. Reciprocal license applications for the American operators will be hand carried to the French PTT in Paris in a few days. Several days before and after the contest N2HIG will operate RTTY from the Island. QSLs for Non-U.S go direct to FJ5BL. U.S. operators and DX RTTY QSLs go to N2HIG.

P29, PAPUA NEW GUINEA. P29VH is active on 75 meters from 1000-1100z with 60 watts. According to ZL4BO, an amplifier is on the way to him from

Australia and should arrive in about 3-4 weeks.

PJ7, SINT MAARTEN. The Central Arizona DX Association members Jack/WA7LNW and Frank/OH2LVG will be operating from Simson Bay, the island of Sint Maarten from September 22-28. They will be signing PJ7/OH2LVG on CW/SSB and PJ7/WA7LNW on RTTY. They will also participate in the Scandinavian Activity Contest and the CQ WW RTTY Contest signing PJ8X. QSL via KE7LZ.

T5, SOMALIA. Rob, N3HQW, should be active now as T5/N3HQW, but no spots have been seen on the Ohio/Penn Network as of yet. Rob's operating time is limited due to his work schedule. The following is a schedule that Rob will try to meet for September and early October:
14 MHz 1200-1500z (if not working)
18 MHz 1500-1700z
21 MHz 1700-1900z
24 MHz 1900-2000z
28 MHz 1900-2000z (if Flux is above 100)
21 MHz 2000-2100z
14 MHz 2100-0100z (if not asleep)
Rob will be on the following frequencies (+/- QRM): 14270, 18150, 21270, 24980 and 28480 kHz. Also, Rob is going to try and rearrange his working hours in November and December in order to spend some time on the lower bands. QSL via WD4NGB.

VK9M, MELLISH REEF (Excerpts from a news release from Murray, WA4DAN): By the time you read this, the DXpedition team will have begun arriving in Brisbane and plans to depart from Bundaberg, Australia upon the schooner "Nina Q 1", hopefully no later than 1700z on September 14. This is actually about 12 hours ahead of the original schedule. Arrival time at the reef is estimated at 3 1/2 to 4 days, depending on the sea conditions. If favorable sea conditions prevail, the operation may begin late on September 18th. While in route to the reef, the team will be signing VK4CRR/MM on 7180 and 14195 kHz plus other frequencies to be announced. The callsign will be announced just prior to the operation and their operation will last until September 28th. The operators and their primary assignments are: VK4CRR (CW/SSB); VK2BEX & V73C (CW/SSB/RTTY); K5VT, VK2BJL & G3WGV (CW); and P29DX & WA4DAN (SSB). Operating frequencies are:
CW - 1825, 3505, 7025, 10107, 14005, 18077, 21002, 24897, 28005, 50120
SSB - 1825, 3799, 7123, 14195, 18145, 21295, 24945, 28445, 50120
RTTY- 14080 and 21080
Upon arrival at the reef the team hopes to quickly get a couple of the stations operational using one yagi and one vertical while the rest of the team is ferrying gear to the two sites and assembling antennas, tents, etc. They will have two separate self-contained sites and each site will have three stations. QSL via VK4CRR, 26 Iron Street, Gympie QLD 4570, Australia. QSLing will commence by December 1, 1993.

XU, KAMPUCHEA. Mike, VS6WV, has returned to Hong Kong after a successful operation as XU6WV. He will be returning to XU-land probably the third week of October using the same call. Mike has left a 1KW amp in XU-land

along with a vertical antenna and generator. Upon his return, he plans to concentrate on 80-40-30 meters, mostly CW. He will especially looking for U.S. stations for new low band countries and a new zone for those chasing 5BWAZ. There is a possibility he may return to XU again in JAN/FEB of 1994, but it is too early to confirm. QSLs for VS6WV and XU6WV go to K0TLM.

XX9, MACAO. Last week we did not have the QSL information for Tony, XX9GD, but thanks to Nob, JI1MTF, he has supplied the following info: QSL XX9GD to Antonio A.P.B. Costa, P.O. Box 1476, Macau.

ZS9/ZS0, WALVIS BAY/PENGUIN ISLANDS UPDATE. According to Ian, ZS9A, a tentative day was just announced for Namibia's takeover of both islands as February 28, 1994. The announcement points out that "many details remain to be worked out", and that this date should be considered as a target date.

40 METER DX NET. Guy, ON4ACG, informs OPDX that Floyd, N5NG (President of the Magnolia DX Association), and himself will be starting a 40 meter DX net October 2nd on 7060/7161 at 0300z. The purpose of the net is to create an international group of friends who are interested in DXing, exchanging DX info; handling, searching and helping with QSLing and QSL information; making skeds and so on..... Everyone is welcome to check in and you will receive a certificate if you check in regularly (FREE! of charge).

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

|>

what do you mean by 'random CW'. was this 5 letter code groups?
are we talking about a coke bottle against a key type scenario? what
movie was that in?

could it be that someone put SuperMorse, a keyboard, or other technological
wizardy into transmit mode accidently for practice session?

i don't know of too many CW ops that have 2 hours to kill on 7.077 just
to sit around and cause problems to RTTY stations. could one of the
kids, the cat, ... have started this up?

an idea, and i confess ignorance in this area.

1. we are a self policing organization
2. we have a network of all kinds of digital stuff
3. we are in the communications end of the technology
4. why can't we put in some mechanism for such scenarios?
a. if interference, or other continuous aggravations exist,
then we can blast this info across the 'network'
b. OO's and all can tune to the frequency, take data, and surely
someone will be near enough to the offending station to take
care of it
5. isn't this done regularly on repeater interference?

i know. it smacks of 'big brother' and vigilantism, but if it's an accident,
no problem. if it's intentional, then that's another matter and another
thread.

just a thought and i'm sure you had it too.

Thanks to Steve for his FCC Report and Order (not quoted here).

Nick KB8??? has not followed one of the prime directives of
Amateur Radio... "LISTEN!!"
Anyone from the Detroit area knows the SMART Repeater to be a
haven for a number of very interesting,bright individuals who
enjoy escalating the art of verbal judo to ever-greater heights.
One of the very irritating things on our (or any) repeater is
noisy, low power operation by new hams who have been told
that all they need to do is buy an HT at Radio Shack and
operate it in their car with a rubber duckie. So gosh, Nick
these guys WERE KIDDING!! Hope he gets his ticket soon ,
listens, and gets it right so we on the SMART can truly look
forward to a pleasant QSO with him. (Otherwise, he risks good
natured harassment at the hands of the "regulars."

Also hope he, and all other new hams please refer to the hobby
and radio service as "ham radio" or "amateur radio" and not the
increasingly used "HAM." i.e "gonna get on HAM so's I get more
range." 73... Chuck

2136. CW and DSP

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-13 02:57:34 UTC
From: cecilmoo@news.delphi.com
Message-ID: <270niu$53j@news.delphi.com>
Source record: 276508

Keywords: DSP
This was previously W9GR kits:

The subject of this discussion has changed, so let's give W9GR a rest. This started when someone complained about weak signal CW response of the W9GR unit. I want to emphasize that I have not seen or heard a W9GR unit in action and have heard nothing but good things about its performance on SSB. But it is my personal opinion, based on my CW DSP experiments, that even a 10-bit A/D is not good enough for serious weak-signal CW reception. I can obtain microcontrollers with 10-bit A/Ds free for experimentation but I have given up on them in favor of 16-bit sigma-delta systems with over-sampling and lots of head-room for uncomplicated scaling.

>To get 90 db of dynamic range, the receiver's audio stages must
>work linearly over a range of roughly 32,000:1. That's barely
>approachable by the very best HiFi equipment, the so called
>"digital compatable" systems. And even they don't really expect
>to reproduce the low end of the dynamic range because no one can
>hear it due to the nominal 62 db SPL of an ordinary room. You
>certainly won't find that in any commercial amateur receiver.
>Some homebrew DC (Direct Conversion) designs can come close, but
>then you have an unfilterable image that aliases into your output.
>Even DSP can't deal with that.
>Gary Coffman KE4ZV

I have been doing most of my DSP experiments with a home-brew direct conversion receiver using a Techno-Whizzy as the LO/BFO (local oscillator=beat frequency oscillator in a DC receiver). The 16-bit sigma-delta A/D with a oversampling rate of 32000 samples per second appears to my ears to work better than an 8-bit successive approximation A/D with a sample rate of 4000 samples per second. Using the same FIR filtering and Goertzel algorithm for CW decoding, the 16-bit A/D results in fewer mistakes when receiving weak signals.

A properly designed digitally controlled Direct Conversion plus DSP CW system deals with images by moving the local oscillator frequency. The desired CW signal shifts frequency in one direction while the unwanted image shifts frequency in the opposite direction, thus making the image easy to eliminate with a tunable brick-wall Finite Impulse Response filter. When my firmware detects an error, it dynamically shifts the LO and the step-locked FIR filter center frequency by plus or minus 10% up to a maximum of 2022 Hz and down to a minimum of 400 Hz. I watch the

characters pop out on the screen of my PC and rarely turn on my HiFi system to listen to the screeching.

73, Cecil, KG7BK

The following is late news about Amateur Radio for Radio Amateurs as prepared from NEWSLINE RADIO scripts by the staff of the AMATEUR RADIO NEWSLINE, INC. -- formerly the WESTLINK RADIO NETWORK. The electronic version of newsline is posted on this CBBS twice monthly. For current information updates, please call (213) 462-0008, (805) 296-2407, (407) 259-4479, (708) 289-0423, (513) 275-9991, (718) 353-2801, (407) 965-1234 or (206) 368-3969. To provide stories and information please call (805) 296-7180. This line answers automatically and will accept up to 30 minutes of material.

Check with your local amateur radio club to see if NEWSLINE can be heard weekly on the air in your area.

Articles may be reproduced if printed in their entirety and credit is given to AMATEUR RADIO NEWSLINE as being the source.

For further information about the AMATEUR RADIO NEWSLINE, please write to us with an SASE at P.O. Box 463, Pasadena, CA 91102.

Thank You

DIRTY WORDS ON THE HAM BANDS

A high ranking FCC official says that the courts are keeping hams who use dirty words on the air. Ralph Haller, N4RH, who heads up the FCC's Private Radio Bureau is just as concerned as you are about the proliferation of vulgarity on the ham bands, but he says that it is the legal system that has tied the Commissions hands.
Imagine that you're a police officer. You spot someone committing a crime and decide to make an arrest. But a prosecutor says a conviction is unlikely because of how the law can be interpreted by the courts. As a result, there's little you can do. That is essentially the position FCC finds itself in when it comes to cleaning up the ham bands. Ralph Haller sez Commission efforts to fight indecency have not been very successful.
"I've tried several times to take something that we thought would be good transcript of something that was on the air. We simply do not have a good track record of being able to build a case that was air tight enough that we could get a conviction." Ralph Haller, N4RH, FCC Private Radio Bureau Chief.
It's not that FCC lacks good examples of indecency. Haller describes some of the cases the Commission has tried to prosecute as particularly egregious. But courts--ever mindful of the Constitution--are hesitant to limit free speech.
"We certainly can't go beyond what the courts have said." says Ralph Haller, N4RH, FCC Private Radio Bureau Chief.
Congress wants FCC to more tightly control indecency on the broadcast airwaves. Haller sez that could open the way for new indecency rules affecting the amateur service. At least until then, trashmouths on the ham bands seemingly stand just beyond the Commission's reach.
The FCC may have its hands tied by the courts, but Haller says that the agency is trying to do what it can.

*****
HOWARD STERN BROADCASTS FINED

While the FCC may not be doing much to take potty-mouth hams off the air, they are enforcing the prohibitions against broadcast indecency. Five stations that carry shock-jock Howard Stern have been issued heavy fines.
Four Infinity Broadcasting Corporation owned radio stations have again been fined $500,000 for broadcasting indecent comments by personality Howard Stern. The FCC said the latest infractions occurred between November 10th of 1992 and January 13 1993. Since then, the commission said, Infinity has taken

steps to keep indecency off the air during times when such language is prohibited.
The fines of $125,000 apiece were against WXRK-FM in New York, WYSP-FM in Philadelphia, WJFK-FM in Manassas, Va., and WJFK-AM in Baltimore. The FCC also fined independent broadcaster KFBI-FM of Pahrump, Nevada, $73,750 for carrying the same Stern broadcasts.
Stern's show is syndicated by Infinity, which already had been fined $600,000 for previous broadcasts. All of the stations issued fines were also given 30 days to respond to the latest charges.
Most observers believe that it will eventually be the United States Supreme Court that will be forced decide what Stern and others can and cannot say over the airwaves.

*****
POLICE JAMMER FOUND

A Manchester Connecticut man who was caught and convicted of interfering with public service radio communications back in 1990 is once again facing the same charges. Ironically he has been busted again thanks to the same ham radio operator who nailed him the first time.
Thirty-eight year old John D. Bertrand is out on bond after having been charged with four counts each of criminal mischief and of interfering with police.
Three years ago Bertrand was placed on probation after plea-bargaining on two criminal counts of interference. He had been located by two-way radio technician Bruce Marcus WA1NXG who T-hunted Bertrand.
When police began experiencing interference last April, they once again called in Marcus. According to newspaper accounts WA1NXG again used his talents as an expert fox-hunter to track down the source of the interference. And you guessed it, he found that Bertrand was the alleged source of the interfering signal.

*****
VEC UPSET ABOUT FREE NOVICE TESTS

The ARRL says that it will not charge applicants for Novice tests. This even though the W5YI VEC has filed a complaint with the FCC alleging that the League's VEC operation is in violation of the rules because it refuses to charge applicants for these tests.
But Fred Maia W5YI who operates the VEC bearing his callsign claims that its a matter of uniformity. That all VEC's who use what is called the annual method of figuring reimbursement are required to charge an examination fee for every test it gives, including Novice exams. The ARRL says that it plans to continue its policy of administering Novice tests free of charge because

it believes that this policy is consistent with an FCC tradition established back in the 1950's. This, as a way of making it easy for youngsters to get entry level licenses.
The League's President, George Wilson, W4OYI says that the whole thing is nothing more than one of the ironies that keeps ham radio politics interesting. Wilson notes that VEC's have always had the latitude to set their own fees. He adds -- and we quote -- "Frankly, we see no compelling Federal interest in whether or not a class of nine year olds ought to be charged for taking an entry level ham radio exam."
But Maia and his W5YI VEC operation see it very differently. In his September 1st issue of his W5YI Report newsletter Maia says that the potential financial benefit to the League resulting from its policy is to serious to be ignored. He says that free examinations when all other VEC's charge, attract applicants who are the potential purchasers of examination preparation materials. Maia believes that the purchasing decisions of these people may be unduly influenced by their choice of VEC's.
Don't look for this one to get settled by the FCC. Looking at it from afar, the bottom line appears to be one based purely on business concerns. Our feeling is that this confrontation is defiantly headed to court.

*****
PRICE INCREASE ON JAPANESE GOODS

The price that you pay for ham gear, and for just about everything else manufactured in the Orient is about to go up. This is because the United States Dollar is dropping in value against the Japanese Yen on international money markets.
You have probably head news reports about this, but never realized exactly what it meant. It means that the television set, camera, VCR or ham radio station that you want is going to cost more in days to come. Some money analysts say its going to cost a lot more.
Right now, the value of the dollar versus the yen in still above 110 to 1. That means on a good trading day one United States dollar will buy 110 Japanese yen. But only a few years ago the dollar bought close to 150 yen meaning that products produced in Japan were a lot cheeper to purchase.
Now, money market analysts are saying that the exchange rate is going to drop once again. That over the next few months the rate might go to 80 yen for a dollar. The real pessimists are predicting a fall to an exchange rate in the mid 60's. What this translates out for you is higher prices. Radically higher prices if the pessimists are correct.
But what about the price of items from other countries in the orient like Korea and Taiwan? Well, without getting into a long dissertation on how international money trading works, lets just say that the currencies of most Pacific Rim nations are heavily

intertied. And as a result, the prices on items imported from those nations will be going up as well.

*****
AMATEUR COMMUNICATIONS CEASES PUBLICATION

The nations only twin language ham magazine has gone away with the announcement Amateur Communications magazine, formerly known as Radioscan has ceased publication after a four-year run. It's Miami based publisher cited lack of advertising revenues for its decision to fold Amateur Communications at this time. Communications Publishing says that it is offering former readers of Amateur Communications some of its other publications to fill out subscription time. Amateur Communications Magazine was very unique because it was the only ham radio publication available in both Spanish and English language versions.

*****
IARU MEETING HELD

The executive committee of the International Amateur Radio Union met in Quito, Ecuador on August 7th and 8th. Items discussed included finances, high frequency band planning, AMSAT matters, regulatory issues and plans for upcoming IARU conferences.

*****
RADIO AMATEURS of CANADA NATIONAL CONVENTION TO BE HELD

The newly formed Radio Amateurs of Canada has scheduled its first national convention for July 29th to the 31st in Calgary. The RAC has also issued a call for papers to be presented at the convention's technical symposium. Topics that will be considered for presentation include high frequency, VHF and UHF operations, packet radio, AMTOR, RTTY EME and AMSAT related sessions.
Those interested in presenting papers or just taking part in the festivities can contact VE6BLI at 55-51551 Range Road number 212 A, Sherwood Park Alberta, Canada T8B-1B2.

*****
OSCAR 20 SURVEY REQUESTED

At the request of the Japan Amateur Radio League, Steve Ford, WB8IMY is conducting an informal survey of OSCAR 20 users. At the present time, the satellite operates a packet BBS in Mode JD every day of the week except Wednesdays. On most Wednesdays, it switches to analog Mode JA for roughly 24 hours.
The JARL controllers would like to know if amateurs prefer the schedule as it is, or if they would like more JA time each week.
Please send your comments Steve so that he can pass them back to the JARL. Steve can be reached at ARRL Headquarters, 225 Main Street, Newington, Connecticut 06111.

*****
AO-21 UPDATE

Peter Guelzow, DB2OS, reports that the Oscar 21 ham satellite's RUDAK 2 transponder is now operating continuously in the digital FM Mode only. That there is no telemetry and no DigiVoice for the moment.
Peter says that nothing is wrong with RUDAK. He says that Telemetry and DigiVoice will resume later this month. Peter adds that October will see a special DigiVoice Experiment using RUDAK 2.

*****
GENIE HAM RADIO NET

The General Electric Consumer Information Service or GEnie Ham Radio Roundtable meets on Sundays at 3pm Eastern Time on 14.287 MHz. You do not have to be a GEnie subscriber to take part and all Ham Radio Operators are welcome to join. The alternate frequency is 21.387 MHz which starts 3:30pm Eastern Time.
The GEnie Ham Radio Roundtable stays at 3pm Eastern time year round and does not change with daylight savings time. With Newsline now active on GEnie, don't be surprised to hear some of our people taking part in the net operation as well.

*****
ORDERING A PIZZA VIA HAM RADIO

As most of you know, late in the day on September 13th, Part 97-113 of the FCC's Amateur Service Rules governing business communications will change. Section 97.113 has become known in ham radio circles as the so-called pizza ordering rule. This is because FCC officials often used the analogy that this rules change would make it legal to order a pizza over a ham radio autopatch.
Obviously, everyone will have his or her own interpretation of the new 97.113 but here is at least one fact. The new regulation gives you the option of doing personal business over amateur radio, but it does not force anyone else to provide you with a way to do it. If the repeater owner says that you cannot order a pizza -- or anything else over his autopatch he is 100% correct. The FCC says that the service provider and not the repeater user will have the final say.

jherman@uhunix3.uhcc.Hawaii.Edu (Jeff Herman) writes:

>And I am sure that the hams who participate in the tornado watch program
>on your side of the Pacific have `a sackfull' of stories.

>This thread has already passed this way a couple months ago. The question
>to be answered is why you are so hostile towards hams who try to help
>others?

It is said that people view the world through the reflection of their own character flaws. That frequently shows up on this forum when people misquote or misattribute actions to others in ways that reflect their personal biases. Such as you have just done. How you could read any of my posts and decide that I'm "hostile toward hams who try to help" is beyond me. Since I probably assumed too much when I expected you to read my post with some degree of intelligence, allow me to spell it out for you very slowly and very distinctly.

First off (and this probably doesn't need stating except for Jeff), I am anything BUT hostile toward hams that help others.

Here is what I AM hostile toward:

* First and foremost, ARES, an organization that has grown obsolete and is bloated by hams who seek to build little empires. In every area I've ever lived or worked as a volunteer, the ARES contingent has invariably been a sad joke, something that embarrasses hams who take emergency services seriously. "Handling traffic" has about as much to do with emergency services as would Morris on a police radio. Providing tactical communications when all else fails IS a mission, one that seems completely alien to ARES. I'm sure there is a place in the world for H&W traffic written on little yellow forms and handled by CW but that place is NOT on the front line of a disaster. People doing this should be back in the shelters with all the other rear echelon people.

* Secondly are the hams who try to help but who don't have a clue and therefore make things worse. This can range from making spurrious reports to driving off into the disaster "in order to get a better view". The event that finally got the ham radio station kicked out of our EMA radio room and into a closet was a tornado net in which a bunch of well-meaning but woefully untrained hams reported tornadoes all over the county when none existed. When that first false report was made, the 911 switchboard exploded in light. Seems a lot of people with scanners liked to listen to the repeater and when the report was made, they did what every idiot does - they called 911.

It was still fresh on the mind of our Director that EMA had recently sponsored a class for tornado watchers and only a couple of hams out of our 400 member club showed up. Which brings up the next point.

* Hams who refuse to undergo any training. Or worse, hams who think they are the masters of technique because they have a license. ARES-style traffic nets have NO PLACE in a tactical situation. Neither do long dissertations, typical of Morning Drivetime, that time the repeater out. We held training sessions for tactical communications at our EMA offices and guess what? NONE of the ARES boys showed up. I heard through the grapevine that they were offended that anyone would "try to tell them how to communicate". Frankly the last thing the central emergency dispatcher wants to do when he hits his ham radio button on his console is to have to change to a wholly different jargon. I mean, heaven forbid any ham actually learn any tactical codes (10- codes, etc) or use a taccall. The last thing I'd want to have happen is a relative find out about a fatality because some ham wanted to feel important and be the first one to tell everyone that John Doe was killed. Or worse, have the damn media hear it on the scanner and then inform the relatives as they shove microphones and cameras in their faces.

* Hams that try to help with crappy equipment. Showing up for emergency service with equipment that doesn't work is worse than doing nothing at all. Hams are the cheapest bastards on the face of this earth. Nothing wrong with that - I'm occasionally guilty myself. BUT. Hams who want to work emergency service take on an obligation to have equipment that works reliably. That means radios that are on frequency and do the right modulation, generators that start and then run without attention or 4 gallons an hour for fuel, HT batteries that haven't lost 90% of their capacity to memory and even cars that are reliable. If you're still nursing a Command set or ART-13, or you're the only one on the face of the earth who can start your generator, stay at home. Please.

* Hams that show up for service with an attitude. I remember one tornado recovery we had in Tennessee where the site was on the outskirts of the county and the ham repeater was the only thing that would reach that far. A bunch of hams showed up and did a very good job for of providing communications for the police and fire units. We had more hams than we needed so I asked one ham whom I knew had a truck to make a gas run for the chainsaws. His reply was " I came to communicate, not to work." Everyone in the command center just sorta turned and looked at each other. Thankfully someone else volunteered. Thankfully too, that a goodly number of hams with chainsaws showed up when we made the call. Emergency service isn't just yacking in the microphone.

* Hams who see emergency service as a way to build an empire and/or acquire special priviledges. The people most guilty are generally those who have menial positions lacking any authority in real life and

who try to compensate by being The Boss in volunteer service. ARES
and the Red Cross are just eat up with these kinds of people.
They don't want to do anything, they just want to be the boss.

So there you have it, Jeff. What I am hostile toward in the amateur
service. I hope I was clear enough this time that there are
no ambiguities.

>obRadio:
>Radio Shack has recently taken a renewed interest in amateur radio.
>This is probably due to the success of the codeless technician license.

Remember those words of yours, "MASS marketing". Expand your markets, create a need and then fill it. So...
There is now a codeless technician license. This is probably due at least in part to the fact that Ed Juge, W5TOO, Radio Shack bigwig in charge of finding new markets and filling their needs, was on the committee which recommended the codeless technician license. (Wonder how he voted? :-)

No kidding? I didn't know that. Hey, that's pretty cool.

I don't know if Cliff was trying to make that sound somehow sinister, making it look like the proverbial "fox guarding the hen house" or not, but I personally think that was a pretty good thing.

Even though I hold an extra class license and use cw exclusively on hf, I still think that the codeless technician license is a great way for folks to get into amateur radio. The fact that Radio Shack (or Icom or Kenwood or Yaesu....) can profit from that change is irrelevant.

The RS line of amateur band ht's offer a very good value for those new members of the amateur radio community. I'm proud to sell them and would recommend them even if I didn't work part-time at RS. Furthermore, I'm encouraged to learn that there is a ham that works for a mass marketer who is in a position to fill the needs of the amateur radio community.

I've heard reports that other mass marketers may be selling 2 meter radios. I wonder if any of their purchasing or marketing people are active hams?

(It's not obvious from his callsign, but Ed Judge W5TOO holds an amateur extra class license.)

>MARS uses.
>
They sound like commercial or hobbiest pilots to me.

Could also be pirates; theres quite a lot of such types who use
frequencies between 6.6 and 7MHz, as a sort of 'grown up CB', calling
themselves 'international breakers' and using spurious callsigns.

2143. ALERT: MINOR TO SEVERE GEOMAGNETIC STORM ALERT

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-13 10:08:20 UTC
From: oler@rho.uleth.CA
Message-ID: <9309131008.AA04693@rho.uleth.ca>
Source record: 276516

/\

MINOR GEOMAGNETIC STORM ALERT

ISSUED: 09:00 UT, 13 SEPTEMBER

/\

ATTENTION:

Levels of geomagnetic activity have significantly intensified over the last six hours. Activity surpassed the minor storm threshold at 09:00 UTC and is expected to pass the major storm threshold over the next 3 to 6 hours. Severe geomagnetic storming with rapid and occasionally deep field fluctuations have been observed over all regions. Similar intense fluctuations are expected to continue through the next 12 to 24 hours before declining to predominantly minor storm levels later on 14 September. Active to minor storm levels are expected on 15 September, but may be augmented with quiet intervals if recurrence is accurate.

A major ionospheric disturbance is in progress at the present time. Levels of geomagnetic and auroral activity have produced near useless propagation for transpolar and transauroral paths. Effects have been amplified due to the large equatorward expansion of the auroral ovals which has taken place - bringing the equatorward edge of the auroral ovals into the middle latitude regions of southern Canada and extreme northern portions of the United States.

A major auroral storm has developed. A Low Latitude Auroral Activity WATCH has also been issued at 09:00 UTC and will remain active until 19:00 UTC on 14 September when it will either be updated or allowed to expire. Auroral activity has, at the time of this writing, become occasionally intense enough to be observed over the low latitude regions. Area's of southern Australia, New Zealand, and Europe may be able to spot activity.

** End of Alert **

2144. AURORA WATCH: Low Latitude Auroral Activity Watch

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-13 10:14:49 UTC
From: oler@rho.uleth.CA
Message-ID: <9309131014.AA05390@rho.uleth.ca>
Source record: 276517

/\

LOW LATITUDE AURORAL ACTIVITY WATCH

ISSUED: 09:00 UT, 13 SEPTEMBER

/\

MODERATE RISK PERIOD: 13 Sep - 14 Sep (UT days)
EMPHASIZED PERIOD: 13 Sep

POTENTIAL MAGNITUDE OF LOW LATITUDE AURORAL ACTIVITY: LOW - MODERATE

POTENTIAL LUNAR INTERFERENCE: LOW

PREDICTED ACTIVITY INDICES FOR NEXT 3 DAYS: 70, 40, 18 (13 - 15 SEP)
(INPUT INTO THE AURORA SIMULATION SOFTWARE *)

OVERALL OPPORTUNITY FOR OBSERVATIONS FROM LOW LATITUDES: FAIR

AURORAL ACTIVITY MAY BE OBSERVED APPROXIMATELY NORTH OF A LINE FROM...

SOUTHERN OREGON TO NORTHERN UTAH TO SOUTHERN WYOMING TO NEBRASKA AND
POSSIBLY PARTS OF NORTHERN KANSAS TO IOWA TO CENTRAL ILLINOIS TO
INDIANA TO OHIO TO PENNSYLVANIA TO CONNECTICUT.

AREAS NORTH OF A LINE APPROXIMATELY FROM NORTHERN FRANCE TO NORTHERN
GERMANY TO NORTHERN POLAND TO NORTHERN RUSSIA MAY ALSO SPOT ACTIVITY.

AREAS OF SOUTHERN AUSTRALIA AND SOUTHERN NEW ZEALAND SHOULD ALSO BE
ABLE TO SPOT PERIODS OF ACTIVITY.

* Contact: Oler@Rho.Uleth.CA or COler@Solar.Stanford.Edu for more information
regarding the Auroral Activity Prediction and Simulation Software.

SYNOPSIS...

A large, well placed and recurrent coronal hole disturbance began
elevating levels of auroral activity late in the UTC day of 12
September. Activity quickly intensified to storm levels. Periods of
intense auroral storming has been observed over the high and middle
latitude regions. Evidence of moderate activity has also been reported
from some low latitude sites near or slightly below 40 degrees north
latitude over North America. We are expecting periods of strong to
intense auroral activity to continue over the next 12 to 24 hours before
beginning to diminish. During this interval, low latitude regions may
be able to spot periods of activity under dark skies. Lunar phase will
not be a strong interference factor.

For those with the Auroral Activity Simulation Software, use input values of approximately 70 for the next 24 hours, diminishing to values near 40 for 14 September.

This warning will remain active until 19:00 UT on 14 September when it will either be updated or allowed to expire.

** End of Watch **

>with having a 20kw transmitter close to your property? Thanks for
>any help.

John, we'd need to know the frequency of the transmitter, and exactly how close it, or more precisely it's antenna, is from you to be able to evaluate any possible risk. The only known health risk due to radio frequency energy is RF heating of tissue. This is particularly important around the eyes. It's known that prolonged exposure to high level RF at certain frequencies can cause cataracts. There is an OSHA standard that dictates what RF levels are permitted in areas where workers or the public may be exposed. This standard is measured in milliwatts per square centimeter and varies according to frequency. For commercial radio sites, areas where exposure is higher than the OSHA standard must be clearly marked and access controls must be in place.

RF field strength drops off rapidly with distance under the inverse square rule. Doubling distance reduces the field four times. So after only a very short distance from the antenna, the fields are down in the safe range. That's one reason broadcasters, and radio amateurs, like tall towers. The height is usually sufficient so that the field strength is below OSHA limits by the time it reaches ground level. If you are concerned about RF fields, support the tallest towers you can since the height offers you great protection.

>A/Ds. I was not even happy with the 10-bit performance. So went to
>a 16-bit sigma-delta system with a two-stage front end filter and
>now I'm happy with the hardware.
>

By the way, I have been looking at the Creative Labs
Soundblaster ASP-16 as a possible vehicle for some communications
related DSP. It sells at discount for around $225 and is very widely
available and installed. It has dual channel 16 bit sigma delta
converters.

I have an order in for the developers kit and will know
much more about the board as soon as it arrives - they just released
the kit and are starting to ship to developers.

I imagine that using PC soundboards with DSP will prove in the
end to be a lot cheaper than low volume dedicated ham boxes - a Soundblaster
ought to be able to do anything that a DSP-232 can do plus a whole lot
more that a DSP-232 can't.

2153. DXCC Country Prefixes (Help)

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-13 14:45:19 UTC
From: dearnshaw@worldbank.org
Message-ID: <1993Sep13.144519.19172@worldbank.org>
Source record: 276379

Can anyone clear up the confusion over the CIS prefixes?

I seem to recall that they have been issued with new blocks of prefixes, and that the "old" UA, UB, UC, UD... prefixes have been replaced with Ex, Ey, Ez, 4a, 4b.. etc. Unfortunately, the current ARRL DXCC List (Jul 93) only reflects the "old" prefixes, not the new ones. What dates do the new prefixes become current (and what is the status of the old prefixes; I doubt if they become "deleted" countries)?

The reason for the query is that I'm moving my logs from a Macintosh relational database to DXBase, and changing the prefixes will be a lot easier to do in the relational database prior to the move!

Thanks... Darrell NR3Y/G4MZF.

: >Even DSP can't deal with that.
: >Gary Coffman KE4ZV

..

: A properly designed digitally controlled Direct Conversion plus
: DSP CW system deals with images by moving the local oscillator
: frequency. The desired CW signal shifts frequency in one
: direction while the unwanted image shifts frequency in the
: opposite direction, thus making the image easy to eliminate with a
: tunable brick-wall Finite Impulse Response filter. When my
: firmware detects an error, it dynamically shifts the LO and the
: step-locked FIR filter center frequency by plus or minus 10% up to
: a maximum of 2022 Hz and down to a minimum of 400 Hz. I watch the
: characters pop out on the screen of my PC and rarely turn on my
: HiFi system to listen to the screeching.

Cecil's system is a very reasonable way to deal with images in a specific application. Another more general way to "deal" with images is to not throw away the phase information in your direct conversion receiver. One way to accomplish this is to run two mixers with quadrature RF phase shifts (or, I suppose, just known non-zero phase relationship, though 90 degrees sure makes it easier...) and properly digitize and process the _two_ baseband signals that result. Another way is to simply digitize at RF, though this is neither so simple to do nor to process. If there are any doubts that these techniques work, have a look at FFT-based spectrum/network analyzers.

2155. Voice Keyers & TS850

I was wondering if anyone has successfully connected the TS850
accessory port to a computer to allow CT to command the radio
to play the voice keyer. I have successfully wired the proper
acc port (cant remember the number) to do it with the proper
resistor value, but I would like to be able to key it from
CT like a DVP board.

Secondly, has anyone tried the LTA Voice Blaster software to
key a TS850? If you don't know want it is, it is a TSR (I assume)
that turns the SoundBlaster into a Voice Keyer for CT or NA,
advertised in this months NCJ on page 27.

Yup, I have run an IC2AT with an HTX202 battery pack before. Nice little feature there, although I understand Icom designed the radios for Rat Shack, so not a surprizing one. Mechanically a perfect match, but you may want to check out the voltage/current ratings of the batteries in question before you commit to buying any.

Just thought I'd share a positive Radio Snack experience....

Went in the other day to buy some parts (it was Labor Day, and we were doing some work on the club repeater...of course nobody else was open, but good old RS was ready to sell us fuses and other misc parts). The gal behind the counter knew we were with the radio club, and she asked when the testing dates were. I didn't know (our club doesn't generally hold exams since another local club does), but told her I'd find out. She wanted to have the info in the store. So I D/Led the list from the InterNet, edited out everything unimportant (ie: other states and places in CA but pretty far away) and prepared a nice copy for them.

I feel like I did my good deed for amateur radio. :-)

Well, there is RF, and then there is RF. I agree that sampling
directly at HF is problematic, but sampling the signal at a few
hundred kHz is quite doable using low-cost A/Ds. And if the input
signal is bandlimited by an IF filter, you need not sample at a
rate above Nyquist. I've done this using the 100-kHz output of
the TS-930 to implement an AM synchronous detector, which uses
the complex signal you describe. There is very little processing
to do in the DSP to generate the two quadrature channels at
baseband. (That is, multiplying the sampled signal by quadrature
"BFO" signals.) Since this approach 1) eliminates from the radio
design the need for two mixers and a second, quadrature BFO circuit,
and 2) eliminates concerns of amplitude and phase balance between
the two analog channels, I consider it a superior approach.

>
> John
>

Not really. You've told us most of them over the years.... If you remember back to our last series of articles on this subject it came down to your experiences don't necessarily translate to the rest of the country. ARES is a viable active success in some areas and isn't in other areas.

Is ham radio still relevant. Still seems to be locally. That's why they keep asking us to play in their planning simulations, etc. Don't forget that as more advanced communications technology comes into play for the general public, so goes the available technology to amateurs.

As I've argued many times in this forum, the best case that can be made for us as emergency responders isn't the radios we bring with us, but rather the ability to work threw wierd situations and still communicate. From that point of view, as long as their is a technical requirement in the licensing structure, and as a group we manage to live up to the Part 97 requirements to serve as a competant reservoir of technicians we should be valuable to emergency organizations.

Yes, I should have been more specific.

Ham radio related clipart is what I am looking for.

Thanks

2164. Ham-Univ Mailing List for College Amateur Radio Clubs

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-13 17:30:34 UTC
From: pschleck@unomaha.edu
Message-ID: <9309131730.AA11204@cwis.unomaha.edu>
Source record: 276211
Cross-posted to: rec.radio.amateur.misc,soc.college,rec.radio.info

With the start of a new academic year, and with increasing activity on the list, it's probably a good time to again publicize the existence of the Ham-Univ mailing list.

In existence for at least several years now (and hosted on 3 different listserver sites :-), the Ham-Univ mailing list is a forum for all things related to college and university amateur radio clubs. General amateur radio discussion is more appropriate for the rec.radio.amateur Usenet newsgroups.

Anyone who is a member of a college or university amateur radio club, or who has a sincere interest in the subject, is welcome. The forum is ideal for topics like:

- Why should students be interested in amateur radio?

- How do I start a club at my school?

- How do I revitalize an inactive club?

- How do I raise funds for equipment and activities?

- How do we find room on campus for a station and antennas?

- How do I deal with campus regulations that restrict posession and use of radio equipment?

- How can the American Radio Relay League (ARRL) assist my club?

- When is the college net?

To subscribe, send E-mail to listserv@listserver.njit.edu. In the body of the message, write:

SUBSCRIBE HAM-UNIV

and you should get an acknowledgement very shortly.

To post to the list, send mail to ham-univ@listserver.njit.edu. To unsubscribe, send mail to listserv again and put:

UNSUBSCRIBE HAM-UNIV

in the body.

Problems that cannot be solved through the automated listserver should be brought to the attention of the list owner, Chris Peckham WG2W (cdp@hertz.njit.edu).

Remember to use ham-univ only for message posts and to keep the listserv updated with respect to your E-mail address (or lack thereof) to save work for those dedicated individuals at the New Jersey Institute of Technology who have extended this service.

Hope to see you on the list soon!

73, Paul W. Schleck, KD3FU

>

BTW, Kenwood follows this approach for digital modulation and demodulation in their TS850 - DSP100 combination. The DSP100 provides for an additional conversion to 38Kcs and that is processed digitally. They do not provide for any significant digital filtering (lack of processing power at the sampling rate is my guess for the reason) - just modulation and demodulation. Since this is not quite so dramatic, this option for the TS850 never caught on.

I tried a DSP100 for a couple of weeks. It did not do much for CW. I could slow down the rise and fall times but I like the timing in the stock unit just fine. For $600 that the units, I do without it. I suppose it might have been more useful if I were working SSB.

al372@cleveland.Freenet.Edu (Merle Rutschke) writes:

>Is there an FTP site, etc. on Internet where one can find the
>Morse Code table?

Gee, I never thought of that, but it sounds like a great idea. I'd
propose that it be something like this:

A didah
B dahdididit
(etc)

and ***NOT***

A .-
B -...
(etc)

Any other opinions? And should I just go ahead and do it and ftp it
somewhere?

You know, Cliff, I agree with you. If the photocopy's signature matches, say, a driver's licence with photo, that's probably ok. Except for the rule.

The only reason I can imagine for comparing the submitted photocopy to the presented original license is to make sure the photocopy wasn't altered. Of course, if it was altered, the FCC will certainly catch it - they look in their files to verify all submitted photocopies - and then both the applicant and the VEs will "catch it," too. Maybe this rule is designed to keep the FCC from having to strip everyone's license in just such a case. I don't know.

: someone will be near enough to the offending station to take
: care of it
==== == ==
By doing what? What can we or the OO's actually do?

: 5. isn't this done regularly on repeater interference?

Can you tune in on 147.225, Milford CT?
Have you heard about the 'vigilante DJ' - ' Mr CQ DX ' and the crap going
on concerning WFIF 1500kc (past 3 years)?

:
: i know. it smacks of 'big brother' and vigilantism, but if it's an accident,
: no problem. if it's intentional, then that's another matter and another
: thread.

It's the intentional stuff we are all concerned with...the accidental stuff
is indeed only that....and one can tell if thats what it is.
:
: just a thought and i'm sure you had it too.
:
: 73 de k5fo/6 dit dit

OK I know this will change the thread but I think we all really feel the same
way, that trying to mix in 2 modes, of which one can too easily mess up
another.....(TTY or packet is automatic and is only slowed down by QRM...
not stopped ...it's a machine)

But you bring up an issue thats really the problem:

When someone does stuff they shouldn't, there is Xlittle that can be done
to stop 'em!

Here is a glaring example:

Past 3 years, a guy---who has a ticket--- has been harrassing Hams, a local
radio station --- JUST to do it (so it seems...his reasons are contrived)
He's been on 1500kc quite often--but randomly, to air foul language, and
in general, is saying ' nya nya, you can't stop me, I am still here'

So same on the Amateur bands....75 thru 2 meters.

The FCC was notified, the guy was even brought to court on a related matter
and he is STILL at it!

So just exactly what can we legally do?

Look...I'm not sure how to begin a new thread, so, lets do this in some
other---well you lable it...ok?

My suggestion would be to join the ARRL and get the ham gear insurance
they offer through Wohlers. It is cheap, you can recover replacement
cost and it covers ANYTHING including pilferage from your car or
accidental breakage.

My only claim was a 2m rig ripped off from my car in Lowell MA. I
faxed the Police Report and had my check in 10 days. My homeowners
and auto policy didnt cover it.

I don't remember the exact cost, but I think it is somewhere around
$1.50 per $100. So your HT would cost about $3/year. You have to
buy coverage for the replacement cost. If you insure it for $200,
you will recover $200 (oops -$50 deductible, so insure it for $250)

: +---+

My gripe is strictly, about these---who ever they are--- people who begin
sending TTY or packet or what ever it is...right smack on top of a QSO thats
in CW.---or what ever mode that was * already * on that freq.
I use only CW on HF, so I can't really say much from another mode's view-
point.
If some one is already ON and is using TTY etc, I just won't use that freq.
I have no qualms about some different mode running 1 kc from me...
I have the same jazz coming from SSBer's...I think Canadian...who's phone
band overlaps the USA CW band . Also, too, some Spanish speaking somebodies.
And again...if they were there 1st, I don't use that freq.

But these people begin sending right on top. They don't listen. They use
a tuning meter or one of those red LED bar graphs --- which doesn't
reproduce CW.
(Iv've been to a few shacks...thats how they do it. Not a speaker anywhere!)
All else is noise to them I guess....
The reverse is true too....some one was sending nonsence on 40 mtrs,
apparently on top of a TTY station.

Too much of this send 1st, listen later jazz.

What band is it on? If it's AM broadcast--540-1600kc, you want to be
at least 30 feet away from the antenna.
If it's FM broadcast---88-108mc, the active elements are usually so far
up the mast, you have nothing to worry about.

Just how close by IS the antenna to where YOU are most of the time?

WRONG! The FCC had at one time a sweep planned for the 27.4051-28.0000 MHz
segment..they did this 3 or 4 days in the SFV and busted a few dozen of the
higher-powered hispanic bandits that run those 'funny freqs'. MALDEF stepped
in an counterfiled every charge, citing the FCC's actions as being a form of
"Selective Enforcement..that targeted hispanics...(sic)". The FCC wound up
dropping the charges. Must be nice to have an army of store-front lawyers
that can scream discrimination! at every charge.

>
>
>
Oh I've got the gear...it's just a goddamned shame that I have to listen to
a bunch of Spanish-speaking twits running hi-power FM simplex at 145.815...
..and they seem totally ignorant of the EXISTANCE of a band plan..they say:
"OSCAR? Oh jyou mus be keedin'd! I doan heer no satellites!"

...just another day on 2m..where the ignorant can claim to be discriminated
against..and never fail to find a sucker to listen to their drivel and believe
that which is pure bunk! Go away...the band plan has the weight of law, Part 97
says so! You can't change the fact that these things they do are simply defined
as ILLEGAL OPERATION. And it wouldn't matter to me if they were speaking the
African Click-tongue, or French or Spanish or English...that they have sought
be exclusive with their language, and then decided to take-on the established
order makes this a war...you can whimper all you like, but you can't make me
like something that I don't like!

Unfortunately, there is no easy answer to this. Even with working
at HP (a supposedly "key account") and wanting to order 100 parts
for production, it is very tough to deal with Motorola. However,
Philips, Siemens and Mitsubishi are even harder to deal with.

As I have said before, if HP is using the part (and we do use
MRF9411's which are 4-leaded MMBR941s), you can order as few as
1 of them as a replacement part from HP's service center. I'll
apologize in advance for the huge markup compared to Motorola's
price list. Another approach is to see if Motorola's cellular
phone division, etc. uses the part and order it as a replacement
part from them. They might only mark it up half as much as HP.

I'm looking for a mod that will extend the receive range on an Icom 2AT.
The owner wants to extend the receive down to about 115 Mhz.

If you have any info on this mod, please reply to

Brian Stamper
bstp_ltd@uhura.cc.rochester.edu

Hi,
Does anybody know if mods for the WARC band exist for the
HeathKit SB200,SB201,SB220 or SB221 Linear Amplifiers ??

Thanks in Advance.

2182. Morse Code Tapes

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-13 21:43:49 UTC
From: cacace@tybrin.com
Message-ID: <1993Sep13.214349.13079@tybrin.com>
Source record: 276422

I've finally decided to try to upgrade from Tech to General, but, as with most people, I'm having a tough time getting the code down. The ARRL tapes are OK, but I've heard there are some better ones. I've seen some in QST, but I'd like to find out how good they are before I put down $40.

What I'm looking for is a tape that makes it 'easy' to increase code speed. I've seen ads for programs that let you learn while listening to music, but I wonder if it really works.

Has anyone out there tried one of these 'alternative' systems and had decent success. Please email.

Rich

2184. Re: CB Linear for sale: How to report?

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-13 22:54:56 UTC
From: randall@neptune.informix.com
Message-ID: <randall.747960896@infmx>
Source record: 276332

A person who uses a linear for a CB gets his own reward.
Almost all of them are crap. They do nothing except
distort your signal and make you the "channel master" of
your neighbor's TV. Most CBers find that after spending
a lot money on an illegal linear, they get no more range
and a lot more problems.

[Re: Radio Shack's HTX-202 and HTX-404 transceivers]

I am wondering what exactly is meant by 'real' or 'true' FM in radio advertising. I am waiting for my ticket (1 month down, N to go...) and am trying to decide on a HT, but I am stumped by this. Isn't FM always FM? And if it isn't, why is 'real FM' better for packet (which I would like to play around with)? I guess most importantly, which current radios do not have 'real FM' (and should they really be avoided)?

As a former 6-year employee of the Shack, let me say a few things
about RS in general.

Since the mid-70's, Radio Shack has been the only nationwide
retailer of electronics parts. In most areas, they are the
only place to buy an assortment of electronic parts that is
reasonably close to home. They have also made a committment
recently to selling quality ham radio equipment along with
excellent code and theory study material. They certainly have
problems, but I am really glad they are there.

You are asked for the last 4 digits of your phone number because
they have a mailing list for their monthly advertisement flyers.
They should stop lying with excuses like "it's for the warranty."
A mailing list is no good unless it is kept up-to-date, so the
salespeople are required to ask every time. Tandy believes
that the monthly flyers are a vital part of how they do business and
worth the complaints that they get from many customers.
You have the option to refuse to give your name and address.

The quality of a store is dependent on the store manager. If
he/she is on the ball, the small parts (the most profitable
items in the store) will get ordered by the manager and kept
in stock. Some managers are lazy and rely on "force
feeding" of parts from the warehouse when the computer
shows that the stock is low after the bi-monthly inventory
count. Some stores also wait for a long time before taking the
parts out of boxes and putting them onto the pegs. If you
find that your local store is out of stock on a lot of items,
a letter to the district manager might light a fire under
the manager's rear.

Occasionally, a part is out of stock at the warehouse and
will therefore be out of stock at the stores for a long time.

Store managers are paid a percentage of the store profits.
They are also required to charge the catalog prices in
company-owned stores, so price haggling is usually useless.

Turnover in salespeople is high like other retailers. Some
salespeople are knowledgeable, but many are inexperienced
and have little understanding of RS's vast product line.
They are paid minimum wage plus a small commission if they
exceed a certain quota. Like other retailers, you should
not expect expertise from someone paid this poorly. Don't
expect them to know if they have a particular transistor in

stock unless you know the RS part number. If you are lucky,
the store manager may be around and may be more knowledgeable.

Radio Shack will give a refund on any product as long as
you have a receipt. If the store manager does not give
you a refund, call the district manager. This is one of
the reasons I am still a customer; I know that I can get
my money back if necessary.

The quality of their products varies. Overall, it is good.
The amateur radio rigs and accessories are excellent. The
audio equipment is good but overpriced unless it is on
sale, and they play to the mid-level (not audiophile) market.
Telephone equipment is generally good, and they do have
parts and accessories. Their magnetic tape is bad. Their
multitesters are generally good, but again they are not
playing to a high-end market like HP does. I would stay away
from their computers, as I have personally found them to
be lacking in quality, overpriced, and not hardware-compatible
with other DOS machines.

Tandy recently sold its computer manufacturing facilities, ending
their 15-year business of making computers. They will remain
a retailer of computers.

They have two interesting new products. One is the Sensation,
a multi-media computer. It looks like a pretty good deal,
but I am waiting for more improvements in technology before
plunking down money for another computer. The other is a new
Digital Audio Recorder using the Philips DCC technology, which
uses tapes the same size a cassettes and will play and record
regular audio cassettes. The problem is that it is a tape,
which does not have the instant selection capability of a CD.
I personally think the Sony Mini-Disc format will win the DAT war
and that this new item is too expensive. ($700)

Tandy's philosophy is "margin uber alles." They have been willing
to sacrifice market share to maintain profit margin. This killed
them in the computer business. This philosophy is getting
very difficult to maintain as competition in consumer electronics
is fierce, and retailers around the country are having a tough
time of it.

Bob, I dont get the NCJ but do have a soundblaster and wonder if you could post some info on the Ou[A[A[A[A[A[A[A[A[A[A[A[A[A[A[A

eeeeeeeeee
sorry bout that. Wonder if you could post some info on that LTA Voice Blaster software from NCJ? I did hook a homebrew DVR to a TS140 but just fed the output to the mike. As to soundboards, I wrote some batch/basic files and made input from the packetcluster translate into voice and put it out on a local UHF repeater but we lost our cluster so I threw the stuff away. Still have the SB card though and that LTA sounds promising. Thanks

I have been a VE here in Cookeville,TN for a while.. here is what is
written in the VE manual we get:

"Any Form 610 that is submitted to the FCC to upgrade an already
existin license must have that license (or photocopy of it)...

EVERY other reference in teh VE manual to the licence has the
words "copy" or "photcopy"

Here's my 10 cents on the DSP-9. I purchased it at Dayton last spring.

CW - 100 Hz and 300 Hz BW work as advertised. Ringing is only marginally better than most crystal filters (yes, sharp filters ring, even dsp units see basic filter theory 101 - linear phase doesn't say anything about ringing).

SSB - Works as advertised. I'm most impressed with the "tuner-upper notch". This feature is really great during contests.

The general noise reduction mode works, it reduces background noise, but I couldn't say that it improves readability much with my ears.

Weak signal CW - I tried it with EME signals (the worse kind of weak signals). My conclusion - my ears are significantly better....

Recommendations: worth the money for general communications, generally quite pleased with it in combination with rigs that did not have a sharp filter such as my IC551 and HW8. As Gary KE4ZV mentioned, you are limited by the receiver performance ultimately....

Down side: I need to send mine back, something went in it.... oh well..

CQ/RTTY Journal WW RTTY Contest September 25-26

Rules
Contest period: Starts at 0000 UTC Saturday, and ends at 2400 UTC Sunday, a total of 48 hours. Not more than 30 hours of operating time is allowed for single op stations. Off times may be taken at any time during contest period, but may not be less than 3 hours duration. All on and off times must be clearly noted in the log and summary sheet. (Multi-op stations may operate the full 48 hours).

Note: Single op stations may operate more than 30 hours, but only the first 30 hours will count toward official score. (This allows rarer DX to give their multiplier to more stations).

Bands: 80, 40, 20, 15, and 10m. (five bands).

Operator classes: There is now a high power category (more than 150 watts) and a low power category (less than 150 watts). Only Single Op, All Band entrants, and Multi-op single transmitter entries are eligible to enter the high or low power categories. Enter one or the other, and so note in your log. Single band Assisted and Multi-multi entries are not eligible to enter these categories.

A) Single Op, All Band and Single Band. One person performing all operating and logging functions. Use of

spotting nets, DX alert packet systems, telephone, etc.
is NOT permitted.

B) Single Op, Assisted, All Band only. One person performs
all operating and logging functions. However the use of
DX spotting nets or any other form of DX alerting
assistance is allowed. The operator can change bands at
any time. Single op stations are allowed only one
transmitted signal at any given time.

C) Multi-Op, Single Transmitter. All band entries only.
More than one person operates, logs, checks for dupes,
use of spotting, etc.

Note: Only one (1) transmitter and one (1) band permitted
during the same period (defined as ten (10) minutes). Once the
station has begun operation on a given band, it MUST remain on
that band for 10 minutes; listening time counts as operating
time. EXCEPTION: One, and only one, other band may be used
during the same time period if, and only if, the station
worked is a new multiplier. Logs found in violation of the ten
minute rule will be automatically reclassified as multi-multi
to reflect their actual status.

D) Multi-op, Multi-transmitter. All band entry only. No
limit to number of transmitters, but only one (1) signal per
band permitted. All transmitters must be located within a 500
metre diameter, or within the property limits of the station
licensee's address, whichever is greater. The antennas must be
physically connected by wires to the transmitter.

More next week.

A great contest. Be in it.

And now an excerpt from W6IWO Dale Skinners column in the RTTY
Digital Journal of July-August 1993.

PACTOR popular?

If you have been listening on the bands of late, then you have
noticed the sudden increase in the use of PACTOR. Unlike most
new toys and improvements we Hams have received over the
years, I have never seen such excitement on the bands. (Except
maybe when SSB was first introduced). PACTOR is everywhere and
I am excited about this but with some reservations.

It seems that some operators in their enthusiasm, have slipped
some in respecting the other operating modes. It is important
that we all observe what semblance of a Gentlemens Agreement
bandplan we currently have. Please try to keep PACTOR and
other burst modes below .080 on the bands.

If it is too crowded when and where you wish to operate, may I suggest to check out the WARC bands. I have been listening there and find plenty of room for more operators.

IPS weekly report

---

2 September - 9 September 1993

Issue no.: 37

Date of issue: 10 September 1993

Date 03 04 05 06 07 08 09
10cm 80 79 80 79 78 79 79
A 28 26 11 11 09 07 (03 estimated)
T 41 41 32 36 39 38 42

Summary of activity

Solar activity was very low throughout the period.

The geomagnetic field at Learmonth (WA) ranged from quiet through to active on 3rd-5th then returned to quiet for the remainder of the period. to 2nd September, and quiet to unsettled 27th to 29th.

Ionospheric F2 critical frequencies at Sydney were depressed all week by 5 to 40 per cent below predicted monthly values, with some periods of near predicted values on 9th. Spread F was observed at night on 4th-7th September.

Comment:

Critical frequencies at Sydney have been regularly depressed this month relative to monthly predicted values. This has been due to the monthly predictions being too high, rather than to the occurrence of ionospheric activity.

Forecast for the next week (3 - 9 September)

Solar : Very low.

Geomagnetic: Active to minor storm levels from either late on the 11th or early on the 12th, through until the 14th. Quiet levels are expected at other times.

Ionospheric: 30 to 60 per cent below monthly predicted values 13-14 September, and 10 to 30 per cent below predicted monthly values at other times.

Courtesy of IPS Radio and Space Services

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065
Australia, for such matters as membership and general
enquiries. Enquiries can also be made by packet to the
President (Col) VK2CTD, or the Secretary (Pat) VK2JPA @ VK2RWI

News items may be sent to Broadcast Officer PO Box 60
Blacktown 2148 Australia, or by packet to VK2JPA @ VK2RWI.
The Internet address for the Broadcast Officer is :

patl@conmusic.pitt.su.oz.au

(this address has changed now my workplace has its own LAN).

The Society welcomes news items on any digital subjects from
anywhere in the broadcast footprint. We are looking forward
to news from your areas to let other amateurs know what you
are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer

That concludes NEWS 776 12/9/93.

2191. help - which ham news groups??

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-14 00:52:29 UTC
From: markh@miro.com
Message-ID: <markh-130993165229@192.207.88.38>
Source record: 276353

I have not used usenet for quite a while. I notice that there are 2 sets of new groups for amateur radio - rec.radio.amateur, and rec.ham-radio. Could someone please explain the difference, and why there are 2 of them?? Also - what is the difference between rec.radio.amateur.misc, and plain old rec.radio.amateur? (rec.radio.amateur always seems empty here)

Your help appreciated.

73 Mark KM6FM

2192. QSL info for 9G1RQ ?

Newsgroup: rec.radio.amateur.misc

2193. Re: I can't find my original license

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-14 02:59:43 UTC
From: drt@athena.mit.edu
Message-ID: <DRT.93Sep13225943@carbonara.mit.edu>
Source record: 276417

In article <27309i$4se@news.ysu.edu> ag821@yfn.ysu.edu (Jeff Gold) writes:

I have been a VE here in Cookeville,TN for a while.. here is what is
written in the VE manual we get:

"Any Form 610 that is submitted to the FCC to upgrade an already
existin license must have that license (or photocopy of it)...

EVERY other reference in teh VE manual to the licence has the
words "copy" or "photcopy"

Okay ... does your VE manual have the instructions for
Form 610 published by the FCC, too? Try reading the instructions
for Section II-B, Item #3, directed to VEs:

"3. If the examinee holds a valid FCC amateur radio license,
compare the original document with the photocopy attached to
the FCC Form 610. Satisfy yourself that they are the same
and that no alterations have been made to either document."

Or how about the instructions for the same Section II-B, directed
toward applicants?

"4. Bring to the examination session and show to the VEs:
...
B. The original FCC Form 660 document of you current FCC
amateur licence (if you have one); ..."

Ya gotta check the original. Same for CSCEs. (That's in 4(C).)

2195. Re: Where is the HTX- HT made ?

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-14 03:54:22 UTC
From: edellers@news.delphi.com
Message-ID: <273f9e$rke@news.delphi.com>
Source record: 276419

The HTX-202 and 404 were designed by Tandy's engineers and are made for Tandy by supplier(s) that they will not identify. The 202 is made in Korea; I haven't looked at the 404 so I don't know if it's from the same supplier. The Icom rumors that were spread a while back started because the 202 and 404 are designed to take the same battery packs as some Icom models.

This business of not identifying the supplier is VERY common among both manufacturers and resellers; the latter usually want the customer to think of the product as solely their responsibility, while the major manufacturers don't want their private-label products sold against their own brands. (Zenith for example has changed its private-label TVs this year so that they can't be controlled by a Zenith-brand remote; apparently some sales people were doing that to prove that the sets were made by Zenith.)

I think it improves readability just a little bit on some signals, but
it certainly reduces the fatigue.

2197. List Of Notable Amateurs [14th Sep 93]

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-14 04:49:39 UTC
From: dave@esi.COM.AU
Message-ID: <4509@eram.esi.COM.AU>
Source record: 276424
Cross-posted to: rec.radio.amateur.misc,aus.radio

[Was it really last November I posted this?]

This is a list of the "notable" Amateur callsigns that I have been gathering for some time. I would appreciate any updates - send them to "dave@esi.com.au". Of course, "notable" is purely in the eye of the beholder; I consider it as someone in the (non-Amateur) public eye.

Another way of putting it is: "Did you know that XXX is/was an Amateur?" when explaining to someone what Amateur radio is all about. Thus, people like Monk Apollo etc would be regarded as notable (who would think a monk would be an Amateur?), whereas the head of a radio company could be expected to be one :-) Note that I have deliberately left out the current crop of Astronauts - it doesn't seem to be a novelty any more.

They have been gleaned from various places: amateur magazines, USENET postings, and straight-out rumour :-) It is probably out of date, and most likely contains errors. However, over time it should develop into an accurate list, suitable for PR purposes. It would be nice if I was credited with maintaining this list...

Thanks to all who contributed - I tried to acknowledge each one.
Special thanks to edw@sequent.com for hammering on the server for me.

Enjoy!

2198. How to find the answers to frequently-asked questions about Ham Radio

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-14 09:44:04 UTC
From: ikluft@uts.amdahl.com
Message-ID: <ham-faq-ptr-1-747999844@uts.amdahl.com>
Source record: 276328
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

```
Posted-By: auto-faq 2.4
Archive-name: ham-faq-ptr

How to find the Rec.radio.amateur.misc Frequently Asked Questions list
------------------------------------------------------------------------

This article will tell you how to find the answers to frequently-asked
Questions (FAQ) from rec.radio.amateur.misc. The FAQ articles are posted on
the 7th of each month. This article is posted on the 14th, 21st, and 28th of
every month as a reminder of where to find the FAQ.

The FAQ articles are intended to summarize some common questions on the
rec.radio.amateur.misc newsgroup and Info-Hams mail list as well as to help
beginners get started.

Besides the monthly posting, the FAQ is always available via anonymous FTP
and from e-mail servers. This article contains instructions for obtaining a
copy of the FAQ. It also contains the table of contents from the FAQ so
that you know which questions are covered by it.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good
signal-to-noise ratio in the newsgroup. However, they can't do it alone - you,
the reader, have to use them. If you are a new user, please print and review
the FAQ articles and look at the instructions in the news.newusers newsgroup
before posting any articles. If you are an experienced user, please help by
refraining from answering frequently-asked questions on the newsgroup if they
are already answered by the FAQ articles. Instead, send e-mail to the user who
asked the question. (It will be helpful if you include the part of the FAQ
that answers their question, but not the whole thing.)

--How to obtain a current copy of the FAQ-----------------------------------

There are 3 ways to obtain a copy of the FAQ.
1) NetNews
2) Anonymous FTP
3) An Electronic Mail Server

Option #1: NetNews
------------------
If you are familiar enough with NetNews to look through previous articles on
your system, Option #1 above may be the easiest for you. The FAQ is posted
so that it should not expire from your site's news spool until the next one is
posted. Unfortunately, some news administrators do not honor the expiration
dates meant to preserve the FAQ.
```

Look in rec.radio.amateur.misc, rec.radio.info, rec.answers, or news.answers.
If the FAQ has expired at your site, try Option #2 (and ask your news
administrator to honor expiration dates for articles cross-posted to
news.answers if he/she can.)

Option #2: Anonymous FTP

Anonymous FTP uses the File Transfer Protocol. It is only available to sites
which are directly connected to the Internet. If you don't know how to use
FTP and can't find a friend to help you, continue to Option #3. If your site
is not connected to the Internet, you should also continue to Option #3.

The following sites have copies of the FAQ:
site name & address path to FAQ articles
------------------- --------------------
ftp.amdahl.com pub/radio/amateur/faq.[1-3].Z
located in western USA, FAQ updated daily
ftp.cs.buffalo.edu pub/ham-radio/faq_ham_[1-3]
located in eastern USA, FAQ updated monthly
rtfm.mit.edu pub/usenet/news.answers/radio/ham-radio/faq/part*
located in eastern USA, FAQ updated monthly
contains news.answers archive - most UseNet FAQs are here
grivel.une.edu.au pub/ham-radio/buffalo/ham-radio/faq_ham_[1-3]
located in Australia, FAQ updated monthly
(Ham files mirrored from buffalo/funet/ucsd daily)
nic.funet.fi pub/ham/info/faq_ham_[1-3]
located in Finland, FAQ updated monthly

Remember, when connecting to the remote system, use the login name of
"anonymous" and, as a courtesy to the site administrators, your e-mail address
for the password.

Option #3: Electronic Mail Server

If you can't use Options 1 or 2, your only remaining option is electronic mail.
You can retreive a copy of the FAQ by sending a message to
mail-server@rtfm.mit.edu

The body of your mail will contain a command for the mail server software.
To get all of the FAQ (consisting of 70K of e-mail in 3 parts), place the
following in the first line of your message:
send usenet/news.answers/radio/ham-radio/faq/*

Leave out the subject of your message because the mail server will ignore it.

--- begin sample mail message ---
To: mail-server@rtfm.mit.edu
From: me@here.org
Date: Mon Aug 14 22:27:33 PDT 1995

send usenet/news.answers/radio/ham-radio/faq/*
--- end sample mail message ---

Table of Contents

Dates indicate last modification.

Part 1 - Introduction to the FAQ and Amateur Radio
** Table of Contents (6/93)
** Introduction to the FAQ (11/92)
* How to Contribute to the FAQ Articles (6/93)
* Acknowledgements (6/93)
* Notes on "Netiquette" (1/93)
** What is Amateur Radio? (11/92)
** Who can become a ham? (6/93)
** Where can I locate information and books on Amateur Radio? (9/93)
** How much does it cost? (9/92)
** Where can I take the tests? (9/93)
** What are the tests like? (6/93)
** What can I do with a ham radio license? (5/92)
** What can't I do with an Amateur Radio license? (pre-4/92)
** I'm interested, who will help me? (11/92)
** Should I build my own equipment or antenna? (11/92)

Part 2 - Amateur Radio Organizations, Services, and Information Sources
** Where can I find Ham Radio information with a computer? (11/92)
* The rec.radio.* newsgroups (6/93)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (new 9/93)
* The Internet File Transfer Protocol (FTP) (9/93)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (11/92)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (9/93)
* Lists of radio modifications and extensions (11/92)
** Can I send ARRL or W5YI electronic mail? (11/92)
** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (4/92)

Part 3 - Amateur Radio Advanced and Technical Questions
** What are the different US amateur classes and what can each of them do? (pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (new 9/93)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US? (9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another country or if I am a FCC licensed ham who wants to operate in another country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** Did you know that you can get college credit for being a ham? (pre-4/92)
** On what frequencies do JPL and GSFC retransmit the shuttle audio? (10/92)
** Can I take my HT on an airplane and operate it if I get the permission of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)

> I am seeking comments from owners/users of the Kenwood TM-741 and TM-742.

I've had a TM-742 for a couple of months and I'm quite happy with it for the most part. The split front panel is very nice: I have the display Velcroed to the dash, up high so it's easy to see without going head-down while driving, while the controls are behind the gearshift, right at my fingertips. The performance of the radio seems very good, I've had several positive comments about the quality of my signal. I've installed a 220 MHz module, which I use for Condor, a popular wide-area link system that lets me talk from San Diego to San Francisco to the north and Phoenix to the west, plus it gives me an almost private autopatch on my club's one 220 repeater.

I do have a few complaints:

Although the radio has two different remote control modes, neither is very useful. You can set it to be remotely controllable through the DTMF mike, but when it's in that mode, the mike is open even when the push-to-talk is not keyed. What this means is that if any DTMF tones come over the audio, they control the radio! Also, it has a tendency to hear even loud road noise as tones, so it randomly goes off into God-knows-what weird mode. The result is that I almost never use this feature. The other remote mode allows limited control through another radio with DTMF. That works ok, but you get *no* feedback about whether your commands were actually heard. If it misses one for some reason and you get out of sync, you're screwed. I've used this remote mode for turning crossband repeat on and off, but only when I was close enough that I could run out and switch it off if things got out of hand. Also, once again this mode leaves the mike open, which can have strange side effects. This remote mode, by the way, is not even mentioned in the manual, at least not in the one that came with my radio. I called Kenwood and they FAXed me some supplementary pages that explain how to use the mode.

Because the radio is really two (or three) radios in one, there's no way to simultaneously receive two stations in the same band, a very useful feature which several other dual-band radios do have. Also, again because the bands are separate units, there's no way to have more than one speaker and switch bands between speakers--it all comes through one, or each band has its own speaker.

Not a big deal, but I wish it had a power setting lower than 5 watts. My wife and I often talk back and forth on simplex when we're in separate cars, and the 20 milliwatt setting on her TH-78A is much more appropriate for that situation. Around town, if I can't hit the

repeater with 5 watts, 25 isn't that much better--you can either see it or you can't. On the road, I have encountered situations where full power was useful.

If you want more than two bands, you really only have two choices, the TM-741/742 or the expandable Icom that lets you have up to six bands (don't recall the number off the top of my head). The Icom only lets you use two bands at once, though. Other than that I don't know much about the Icom. If you want a dual-bander with remote control, the Icom 2410 is probably the better choice, as it gives you voice feedback in response to your commands. For myself, I'd get the 742 again, since I really do use all three bands at once.

I purchased an 88 Bronco II and found myself crying in 20 degree weather when I tried to install a HF rig. There is so much interference that it intrudes on 2 mtr. at times.

Anyway, I had a lot of interference from the tank mounted fuel pump (try scanning the car with a HT and then remove the gas tank cap and see the increase in interference.) and after a lot of inquiries I found out that Ford would put filters in the tank for nothing if you complained a lot. They have a service bulletin out (at least on the Bronco) that covers this.

I would suggest that you pressure your dealer and suggest that he look back into the service bulletins.

BTW, after talking to the (hams) folks that run the Ford radio and interference testing lab, it seems as if the Bronco (and possibly a lot of other Ford vehicles) have these flaws (?) built in, and have for many years.

Ringing is NOT what is happening in an FIR filter. A narrowband crystal
or other IIR filter, when fed energy from noise is almost like an oscillator
and the damping in the oscillator is overcome by the energy supplied by
the noise. This is a true ringing. In a very narrow FIR filter, you
DO filter the noise power and get noise limited to the pass band of the
filter but it will not `almost oscillate.'

>That's why I still have my original Novice license, coated in plastic.
> So why is it that FCC will accept it without a second thought, while
>VEs have to have the original? Most importantly, what makes it illegal?

The 610 can be accompanied by a copy because the FCC assumes that the
VE has followed the rules and personally examined the original.

It is extremely easy to alter a photocopy.

However, the guy who tries to slip in a forgery will be discovered
when the FCC processes the 610.

So, I suppose it really doesn't matter. As a VE, it would make matters
easier to just examine and keep a photocopy because there is always the
guy who doesn't bring the original. By the same token, there is always
the guy who brings in the original and doesn't have the photocopy!

Us lowly VE's will just do whats they tells us to!

In my previous posting, I described how the Manager of the Marlboro,MA Radio Shack would not allow handouts of VE Sessions to be displayed in his store. I received many many personal replies from Hams in this newsgroup who were outraged. Also, I noticed that many more threads were spawned from this message.

The Ragional Manager of New England, Mr. John Hamilton, interceded and "persuaded" the Marlboro Manager to allow the handouts. Furthermore, he volunteered to duplicate my posters if I send him a clean original and distribute them to many other regional stores.

I applaud his action and wanted to share this information with the 200,000 other readers of the net. Hopefully other Radio Shack Managers will not have the same attitude as the one I had to deal with and will see the advantage of promoting Amateur VE sessions.

2208. I can't find my original license

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-14 13:35:00 UTC
From: LEY@UWSTOUT.EDU
Message-ID: <01H2XIJLH7K0002B4Z@UWSTOUT.EDU>
Source record: 276331

I think that the reason the VE's are supposed to see the original license is that if the exams are passed the CSCE becomes sort of a temporary license and it is important that the applicants status before the exams be verified as well as possible. Later, the FCC has a data base to examine and alterations to the license can be detected. That information is not immediately available to the VE's though and they need to check the orginal to be on the safe side.

>He's been on 1500kc quite often--but randomly, to air foul language, and
>in general, is saying ' nya nya, you can't stop me, I am still here'

Must be an Extra. :-)

Seriously though, Randy makes a good point. Self-policing implies some power of enforcement, and we just don't have that. Our "police powers" function only when everyone involved are basically good people that occasionally have a bad hair month... in that scenario, tracking down the offender and letting him/her/it talk out the problem is all we need. When we are dealing with someone who is being vicious just for the fun of it, the system breaks down in a hurry.

Maybe the only answer is some kind of licensing fee, so the FCC can afford to zap more than just the worst of the worst. (However, I would support fees ***ONLY*** if there are strong provisions to make sure the funds raised go to support rules enforcement and better services to the amateur population.)

In the meantime, the hams can silently QSY. As for the broadcast station... that's a paying customer, so the FCC should quickly respond to complaints from that direction. They've been pretty strict about booting pirate broadcasters with FM-10s and such off the air; I'd be surprised to find that the FCC would ignore willful BCI.

>idea...

I reviewed the Repeater Mapbook from artsci in QST and when reading it, I had a similar concern: My club's 2-meter repeater on 147.09/.69 (CTCSS 110.9 Hz) covers at least half of Connecticut, and much of Massachusetts and into Rhode Island (and parts of Vermont). It's been on the air continuously since the 1960s and is the state Office of Emergency Management's designated Area III backup communications repeater, and its relatively well used (and sponsored by an ARRL Special Service Club). But it didn't show up in the Mapbook! I was kinda disappointed, but I guess it's tough to choose what machines to include if you aren't native to a particular area.

As far as the ARRL Repeater Directory is concerned, I believe that it's the most comprehensive listing you can get your hands on conveniently. If it had room, maps might be a nice addition. BTW, the data in the ARRL Repeater Directory is updated solely by frequency coordinators across the country, so if a particular repeater is listed inaccurately or not at all, it's the machine's licensee/operator's responsibility to contact the local Freq Coordinator and get the information updated for the next edition.

You want a better map-based directory? Type in info from all states you care about, draw/scan outline maps, and publish something. Could be a neat entrepreneurial opportunity!

One caveat: If it's a rig you also use/plan to use for running packet, check the deviation when it's spitting out packets. One of the most common problems with effective packet communications is having too much deviation. On 2 meters (1200 bauds), 5.0 kHz is the MAX! 3.0 is very good, if your signal is adequate. Generally, 3.5-4.0 kHz is ideal for most stations. If you crank your rig for mike audio, just check it if you run it on packet. And document your adjustments in case you forget/sell the rig!

You are asked for the last 4 digits of your phone number because
they have a mailing list for their monthly advertisement flyers.

Actually the four digit thing is much better than their old policy
of requiring you to write your address on every single salesslip.
Not only is the new method faster, it has greatly decreased the number
of redundant flyers I get.

The four digits are just a key that most people can remember. Sears
used the last two digits to sort catalog orders as well.

-Ron

Not only CW, and not only on HF. I've had packet bleeps blast loud and clear right into the middle of 2m FM simplex conversations. At least if the packet station hears you, it waits, but otherwise it keys right over you.

>remember back to our last series of articles on this subject it
>came down to your experiences don't necessarily translate to the
>rest of the country. ARES is a viable active success in some areas
>and isn't in other areas.

John tends to paint with a broad brush, but his comments are mostly
on the mark for this area, and as far as I can tell for East Tenn
as well. We once had a marvelous system in Ky during the 50s and
60s, at least up to 68, but my visits up there seem to indicate that
it too has decayed, mostly for the same officious reasons given by John.
Most agencies want and need help sometimes, but they want and need it
on their terms, using their methods and their procedures. This is only
reasonable on their part. Too many times the people who gravitate to ARES
want to give of their services only if they can shape the systems and
procedures to *their* vision. And the two are rarely coincident.

>Is ham radio still relevant. Still seems to be locally. That's why
>they keep asking us to play in their planning simulations, etc. Don't
>forget that as more advanced communications technology comes into play
>for the general public, so goes the available technology to amateurs.

There are two issues here. First I'd opine that the growth of advanced
consumer communications technology has narrowed rather than widened the
gap between consumer communications capabilities and amateur capabilities.
Amateur practice really hasn't changed much from the early 60s, aside
from packet. Meanwhile the growth of cellular, FAX, and computer communications
among the general public has skyrocketed. I'd note that when the San Franciso
earthquake hit, many of us turned to the computer networks for word rather
than dialing in HF as we would have done in earlier times.

The second point is related to the first in a way. While consumer
technology has advanced rapidly, amateurs have by and large tended
to cling to outmoded techniques, and to increasingly rely on the
same consumer companies to supply their black boxes. Because the
amateur community has resisted change, both informally, and formally

through their input into the licensing regulations, those black boxes have increasingly fallen behind the state of the art in communications technique. Communications has increasingly become a cooperative venture. From cellular systems to in-car terminals, the emphasis has turned strongly toward actively cooperative networks of systems. Yet amateurs continue to operate under a paradigm of competition rather than cooperation. This shows in our inability to establish stable communications networks at the local, state, or national level. Our interoperability with agency systems is still very firmly in the manual yellow pad stage. That puts us more and more into the irrelevant category.

>As I've argued many times in this forum, the best case that can be made
>for us as emergency responders isn't the radios we bring with us, but
>rather the ability to work threw wierd situations and still communicate.
>From that point of view, as long as their is a technical requirement
>in the licensing structure, and as a group we manage to live up
>to the Part 97 requirements to serve as a competant reservoir of
>technicians we should be valuable to emergency organizations.

It's true that many amateurs have mastered the art of soldering a connector, and some even know which end of a beam is the front, but how many can quickly set up an ad hoc interface between an agency communications system and an amateur system? How many can quickly and acurately solve a network problem for an agency? How many can even quickly adapt to an agency's operating protocols? How many can discard their normal amateur competitive training and adopt a cooperative approach? As agency support personnel, our job is to fit seamlessly and transparently our communications assets into the agency's systems. How many even know what their local agency's systems are? How many even know what it means to operate over a trunked communications systen?

For most amateurs, the roles that they can fill *as amateurs* in the emergency communications assistance role grow smaller every year. To most agencies, we are just warm bodies who must be taught to *unlearn* our amateur habits before we are useful to the agency.

If we're serious about filling an emergency communications role, we need to look carefully at the way we operate day to day as amateurs and see how that relates to what a trained emergency responder needs to be doing. We should be concentrating our activities on developing cooperative communications systems within the amateur ranks. We should be working to eliminate as many practices based on competition and emphasis on differences as possible. In short, we should concentrate on teamwork rather than constantly battling to see who can collect the most postal cards, give our callsigns the most frequently in a 3 minute period, build empires to our egos, or other inane practices. We need to be forward thinking, quick to adopt new technologies and

exploit them to their fullest. We need to be equally ruthless in discarding obsolescent techniques and equipment or we will fall increasingly behind agency practices and needs. That sounds more like a description of the average computer geek than it does of the stereotypical amateur radio operator doesn't it? I suspect there's a lesson there.

2222. ICW21AT out of band sensitivity

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-14 16:19:46 UTC
From: marcbg@feenix.metronet.com
Message-ID: <CDCqoy.J97@feenix.metronet.com>
Source record: 276350
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

From past postings, it seems that the Icom W1AT can receive from 50 - 900 MHz. Some spots are hotter thank others. Does anyone have any mods or information on whether it is possible to increase sensitivity? Of course, the W21AT has good intermod rejection, so this could suffer if the front end were opened up more.

Any comments? Ideas? Let's find out more about this radio!

Generally true. On the other hand, a certain CBer who shall
remain nameless runs a 5 kW plate modulated transmitter that
could pass an FCC broadcast proof of performance. In fact it
has passed a facsimile of a proof, I've seen the scope pictures
to prove it. None of his neighbors experience any interference.
Of course any CBer unfortunate enough to try to talk over him
tends to get squashed. :-)

(He runs a 5 el beam at 100 feet too, fed with Andrew Heliax.)

>
>hf, I still think that the codeless technician license is a great way
>for folks to get into amateur radio. The fact that Radio Shack (or
>Icom or Kenwood or Yaesu....) can profit from that change is irrelevant.

But the fact that two of the committee members had a conflict of interest here (i.e., high-level people with an interest in selling mass quantities of ham gear) is not irrelevant. You make it sound as though you believe that the end justifies the means.
I don't give a good rip if Ed Juge believed in no-code since he was knee-high to a dandelion; if he's influential in marketing in a huge organization with a vested financial interest in seeing the no-code proposal go through, it's a conflict of interest. The _least_ he could have done would have been to decline, but recommend someone else he knew who supported the proposal but had no vested interests elsewhere; I'm sure he'd have been influential enough to get that person on the committee.

>I'm encouraged to learn that there is a ham that works for a mass marketer
>who is in a position to fill the needs of the amateur radio community.

He helped MAKE that need before he filled it. It's possible that he helped make that need just so he COULD fill it.
To me, it's no different than having defense contractors on the Congressional committees that set military budgets.

>I've heard reports that other mass marketers may be selling 2 meter radios.
>I wonder if any of their purchasing or marketing people are active hams?

One poster here said that J.C. Penney is showing one in their Christmas Wishbook. But they weren't on the committee for no-code. Having spotted an already-existing need, they're selling goods to fill the need. Not the same at all; they didn't help to CREATE the need.
They have no reason at all not to try to get into that market, _now that it exists_. Had they been insiders trying to create the market in the first place, it would have been quite different.

>(It's not obvious from his callsign, but Ed Judge W5TOO holds an
> amateur extra class license.)

And a high-paying job at the top of the totem pole at a major electronics
marketer. That gets him bonuses for increased sales. Every time you sell
an HTX-202 or HTX-404, you're putting money in his Christmas stocking...
...which would be fine if he hadn't been wearing that stocking during
meetings of the committee that decided the no-code issue.

Just to set things straight: There is no such thing as a Canadian
phone subband. There is no such thing as a Canadian CW subband.
There is no such thing as Canadian subbands, period. WE HAVE NO
GOVERNMENT-MANDATED SUBBANDS, just bands. What we have is a
gentlemen's agreement, and it works fine. We have incentive licensing
as well, and *it* works fine; it just doesn't confuse proficiency in a
single mode with general proficency.

About the other thing: well, the hidden-station phenomenon is hardly
new. It's got almost nothing to do with mode.

If you can qualify as staff or student at an institution of higher learning,
you can try Motorola's University Support line (call 1-800 info for number).
They sent me some hard to find (6 weeks back-order everywhere I called) fiber
optic emmitters in three days. Just fax a letter with your ID card copied
to it to them asking for the parts. If the total is less that about 40 dollars
they ship it right to you with thanks for choosing Motorola (free samples!!).
They told me they will sample (around 5 to 10 units each) anything they are
currently producing. Good luck, they have made me very happy!

2230. need expert info on nicads.

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-14 18:35:20 UTC
From: falk@peregrine.Eng.Sun.COM
Message-ID: <m9c3n8INNar@exodus.Eng.Sun.COM>
Source record: 276359
Cross-posted to: rec.models.rc,rec.photo,rec.radio.amateur.misc,sci.electronics

Hi all; I figured these newsgroups would be the best source for information.

Not too long ago there was a multi-part article on the care & feeding of nicads. I'm sorry to say that I lost it; but as I recall, the gist of it was as follows:

1) it's very, very bad to reverse polarity on a nicad. For this reason, completely discharging a device with multiple cells is very bad, because if one cell has slightly less charge than the rest, that one cell will be charged backwards by the others. Once this happens, the cell is destroyed because internal shorts form in the cell.

For this reason, you also want to make sure that all cells in a device are as near to a matched set as can be, in terms both of general characteristics and initial charge.

(I destroyed three AA nicads in the last three days this way, which is what prompts this post.)

2) It's almost as bad to over-charge a nicad. This is where the cheap R*d** Sh*ck charger I use is causing me problems. Detecting a full charge condition is rather tricky. This can be done by watching for a temperature increase in the cell, or a small voltage decrease towards the end of the charge cycle.

Charging cells in series can cause problems because some cells will reach full charge (and beyond!) before the others. Again, a prevention is to make sure all cells are a matched set.

3) There is a memory effect, in which a nicad which is charged and discharged on a very consistent cycle will eventually reach a state where it can no longer be discharged below it's habitual discharge point. This effect is very slight, and was originally observed in satellites

4) The prevention for the memory effect is to ocassionally put the cells through a deep discharge. However, doing this by running a device down completely with the cells installed can destroy cells (see (1) above.) For this reason, deep discharge is not such a good idea, unless you discharge each cell individually.

Someone please correct me if I have any of the above wrong.

At any rate, it seems to me that the ideal nicad battery charger would operate as follows:

1) all cells charged individually, rather than in series.

2) Deep cycle: discharge the battery at a fixed current until the voltage drops to some threshold.

3) Charge: charge the battery at a fixed current until the voltage climbs to some threshold.

4) Maintain: hold the cell at a specific "full charge" voltage.

Does this make sense?

As you've probably guessed by now, I'm planning to design and build my own charger -- one that does it RIGHT for a change. Can anybody tell me what the lower (discharge) and upper (full charge) voltages should be? Can anybody tell me what good discharge and charge currents should be? (I'll be mainly using this to charge AA's for my camera gear.)

Of course, a pointer to a consumer charger that does the same job would be nice too.

OH? On what freqs? There are none left that won't QRM existing ones.

Besides... they are trying to do this on a neighborhood budget...not Clitons.

1980's
I saw (heard) a group in my area^trying to do the same thing.... and they
had their problems... resolved by setting up relay stations to relay any
NEEDED info up & down the line.
Everyone learned just what their range was, and made sure to not get out
of range....passed along any watching to the next person who'd likly be
next to see the 'suspect'.
The Equip. involved HT's (all kinds) and Car sets, and a few Home sets.
and was done on 4 simplex freqs.
Prio r to a nite of watch, they'ed tell PD who was going to where/cars etc,
so PD would know they were'nt someone out to make trouble.

PROBLEM! N O W adays...with 'stalking' laws....such watch groups could
be viewed as a form of stalking!

So...they'ed want to check with the PD on all those issues 1st, before they
start spending money on rigs that might be spent on another band...

About that "spur" at 146.76 on the Radio Shack HTX-202. I've noticed that it disappears when I hook up a real antenna.

>not have 'real FM' (and should they really be avoided)?

There are basically two ways to achieve angle modulation. One is to directly FM an oscillator in the radio. The other is to use a phase modulation stage that follows an oscillator stage. A phase modulator has an inherent pre-emphasis effect on the modulation, to get pre-emphasis in an FM system, an audio shaping network is required. Since all common angle modulation schemes use pre-emphasis/de-emphasis for voice, the net effect of using one method or the other doesn't matter except near DC. Phase modulation can't make low rate of change offsets in the transmit frequency at reasonable deviation, but FM can. Normally this doesn't matter for voice since there aren't any energy components in voice near zero Hertz. But it can matter to certain packet modulation schemes, particularly 9600 baud modems and direct FSK schemes. The bit stuffing in packet usually allows PM schemes to work though because the signal is never held at mark for long periods.

Another factor is that while almost any arbitrary deviation can be generated by an FM scheme, much smaller swings are possible with phase modulation. Thus phase modulators normally work at a low frequency and the resultant signal is then multiplied to the operating frequency. That also multiplies the deviation of course. FM can be done the same way, and usually is in crystal controlled radios, but it can also be done "on frequency" by modulating a VCO as part of a PLL system. This is the way many modern radios, including the RS units, work. This has a drawback for packet too. The loop filter of the PLL now enters the picture. It will now try to average out the low frequency components of the modulation, effectively removing it and leaving you with the same situation as with phase modulation. Thus many people attempting to do 9600 baud prefer to use a "true FM" system that multiplies a crystal oscillator to the operating frequency.

Mostly though, it's just marketing hype when seen in ads for radio equipment.

That's not really what "self policing" means. The emphasis is on the
self part. What it means is you are supposed to police yourself in
your operation on the air. Some hams also "snitch" on others, or even
resort to vigilante action, but that's not what self policing means.

> radio?

I have a TM-741 that I use as a base radio, and I have a few
gripes.

First, the good stuff. I get excellent transmit audio reports.
300 memories (with the third band installed -- I have 220) is a ton.
The display is great, and it's pretty easy to program (especially if
you add the DTMF module). Lots of handy computer features.

As for gripes, receive audio is awful, even with an external
speaker. It's the worst sounding radio I own (I have 5 others that
can receive 2 meters, and they all sound better). The scanning speed
is very slow, especially if you get all three bands scanning at once.
The squelch seems to serve no point. Even turned all the way up, an
S1 signal can get in. It's pretty susceptible to intermod. As a base
radio, having the fan come on all the time when you transmit is a bit
annoying.

I'm not sure if I'd buy another. I do like having three radios in
one.

Over charging is not a problem at all as long as it is at less than c/10
charge rate. 600mAh battery - charge forever at < 60mA. However, if you
charge faster than that, overcharge will cause over-heating, venting, and
in extreme cases, explosion.

Yes, but in a pack the individual cells are often not available.

>
> 2) Deep cycle: discharge the battery at a fixed current until the
> voltage drops to some threshold.

On an individual cell, this voltage depends on the discharge rate. Try 0.7V
to 0.9V where 0.7V is at, say a 15 minute rate and 0.9V is at a 30 minute
rate.

>
> 3) Charge: charge the battery at a fixed current until the
> voltage climbs to some threshold.

Okay. Try 1.5V per cell if on a high rate charge (1 to 4 times C) or, if
on trickle (< C/10) expect the batteries to reach 1.44V per cell.

>
> 4) Maintain: hold the cell at a specific "full charge" voltage.

Only if on low rate. If on high rate, you will burn the batteries. Instead,
drop to trickle and let them go forever.

My personal experience is different. If I use "Alpha Alpha" to start off
my call, I find that people often substitute "Kilo Alpha" or "Papa Alpha"
instead. However, "America America" gets the point across in two ways.
(eg AA isn't even on the same continent as PA)

I have found that English-speaking people have a very hard time with "Lima",
so I use "London". (Spanish-speakers trouble with "London" so "Lima" works
then)

And "Romeo" is no substitute for "Radio." "Romeo" is often confused for
"Kilo" or other works. "Radio" always gets through.

Let me tell you, when you send your call verbally 1-2000 times in a radio
contest, you notice these things....

"America America Four London Radio"

I thought about that, but since the wire which attaches the ground side of
the connector to the radio PC board is *soldered* across both the connector
threads and the nut which holds the thing in, I figured I'd never get it out
even if I tried. Might as well make it even more permanent with the glue.
I really didn't want to have to take the radio apart again to fix the broken
wires, and that was much more likely than needing to replace the connector.

We're gonna split hairs I'm afraid. Ok, "oscillate" is what it won't do,
"ring" will happen. Analyze the impulse responce of an FIR and tell me
that it will not have time components equal to the time spacing of the
"taps of the equalizer" , time spacing of the sampling rate, etc. Yes
I agree with the rest.

The DSP implementation (DSP9) has these time dependent features that
sound just like "ringing" of my equivalent xtal filters..... and
look like "ringing" on my oscope, hmmmmm must be "ringing" :-)

Amateur radio can be used very effectively for a neighborhood watch
group, but there are several things to consider first.

A neighborhood watch provides eyes and ears to observe and report
suspicious activity to the police -- a neighborhood watch is not a jr.
PD or vigilante group.

You do NOT want to interfere with police activity, that is a crime in
itself. If you are listening to the local PD dispatch, fine, just don't
respond to a call.

Make sure your local PD knows what you are doing, if possible, get them
to participate with you as advisors. They will be suspicious of you, if
you work WITH them, everyone benefits and is safer.

Remember that the bad guys will not like you, so you may become a
target. Consider whether your group will be a low profile operation or
a showboat. Both types of activities have their place, I would again
refer you to the local PD for advice.

Tying up a local repeater for your activities may not be a good idea to
the other hams using the machine. Consider setting up a repeater of
your own if you will be a big enough group to need it.

Some hams do not like "jr. police" operations, on some machines hams have been flamed for trying to report drunks on the highway. Another good reason for your own machine. Be aware of your environment.

Another post added several good caveats I won't repeat.

Now the good news. Here in Orange County, California, The City of Irvine SPONSORS an amateur radio group, called IDEC (Irvine Disaster Emergency Communications). This is not actually a neighborhood watch group, the primary mission is disaster communication aid after "the big one", but the group also works with the PD when extra eyes and ears are needed, and supports community events like 5/10K runs. IDEC has their own repeater at city hall, right next to the PD gear, a radio room off the EOC (Emergency Operations Center), phone patch access to the 911 dispatchers and speed dial to other public safety organizations like fire and adjacent PD jurisdictions (for non-emergency, i.e.: not 911 traffic). Training is provided and members are encouraged to become familiar with police and public safety procedure.

Another outstanding aspect of this arrangement is that the dispatchers are made aware of the group specifically, and ham radio in general. They recognize a patch call and handle the non-duplex mode appropriately. They also don't get rattled when the caller gives a location across town and "enhanced 911 caller id" identifies the call as originating in city hall. That kind of thing has happened and caused problems in some areas.

I am a member of IDEC, and I think it is a good approach to ham support of public service. If you want a contact at Irvine PD for your local PD to talk to, send me a note and I'll get you a name and number, and good luck.

>OH? On what freqs? There are none left that won't QRM existing ones.

I don't think a repeater is needed. Most neighborhood watch groups only cover
an area of less than 1/2 mile in extent, so HT's should work fine, and if
needed, a base station could handle relays.

We had a group here in Phoenix that did that. It worked well except for
one little problem: they didn't have ham licenses. An unscrupulous travelling
radio seller sold them a bunch of radios and told them everything was
taken care of. They couldn't figure out why these ham operators were
bothering them on THEIR frequency, so they complained to the FCC. They
were very upset when the FCC told THEM to cease operating. Unfortunately,
it was not a plus for ham radio because of the nasty publicity that
emanated from it (these poor, persecuted people were JUST trying to
take care of their neighborhood when this big bad government bureaucrat
told them they couldn't. These same people had gotten a lot of favorable
publicity and were well connected. Sigh.).

[small flickering flame ON]
None of the above has anything to do with the question asked or with
ham radio.

>Robert W. McGwier

Right on, Bob! If one takes white noise (containing all frequencies) and passes it through a narrow 1000 Hz FIR filter one will hear a 1000 Hz continuous tone. Who was it who said, "Only a fool discovers purpose where there is only process"? With a good 1000 Hz FIR filter you can "prove" that God generates 1000 Hz tones...KG7BK

Actually, according to part 96 (?), they need proof that you've used
it, as well as posession. I think having it hooked up to the CB is
proof tho.

>Of course, a pointer to a consumer charger that does the same job
>would be nice too.

Well, right now I don't have the data available but usually the GOOD NiCad
chargers don't stop until they reach a voltage level, but when the voltage
starts to decrease (negative derivative of dv/dt). This is because the voltage
thereshold is hard to determine because of the small voltage swing of the
battery cells. Other parameter monitorized is the temperature of the cells:
they get warmer after the full charge condition.
So, a good charger would use these two parameters (using mainly the first
because it is more precise and the second for a 'second opinion') and finally
with a timed shutoff security system just in case everything else fails...

I would bother trying to build such a charger from scratch. First because
it would be rather expensive: you would need at least one
microprocessor/controler with an ADC.
There are some intelligent NiCad chargers that use all these parameters
available from different suppliers (Linear Technologies, Maxim, and other less
known companies - at least to me....-). I saw an article with a review of
almost half a douzen (or more) of these in August's Electronic Design.

If you are interested I can look up the reference of these chips and the
contact of the companies making them

I hope this helped

Message-ID: <CDE1B5.Ht6@hpqmoea.sqf.hp.com>
Source record: 276283

Oui, Jon, c'est vrai.

Quite a few people spotted that one, but no-one noticed "malapropism". This is more open to debate; should such a word, derived from a proper name not have a capital "M" ?

(Even fictional characters should get their names with capitals!)

Aren't languages just the limit, even the word "verb" is a noun !

Somehow it seems a shame that people have to pass examination of the speed and accuracy of their Morse coding, yet there is ample evidence that message content would be a far more deserving field for improvement. I don't mean spelling or grammar, I'd just like to encourage interesting QSOs and discourage "Rubber stamp" contacts.

Any mistakes in this one are NOT deliberate ! no doubt there are a few.

Cheers,
David

2253. Mods database/ftp-530

I've looked in the mods databases mentioned in the FAQ, well with
exception of simtel20 since it is gone :-(, and I have not been
able to find mods for extended receive for the FT-530. I picked up a file
from a local packet BBS that referenced a mod, but alas no luck.
Anyone know the mod or an up to date mod database that is ftp'able?

>For the same reason a frequency can be tied up by two operators in QSO.
>For the reason that they have the right to use those frequencies in the mode
>they're using.

I think you're missing the point. Sure particular frequencies can be
tied up for hours by a couple of people, the issue is why should the
message *system* be stalled by an antiquated net bottleneck. The
answer is that it shouldn't of course. And in fact it isn't much
that way anymore. Most message handling has moved to packet, AMTOR,
and RTTY for speed and accuracy. That's largely replaced the Continental
Corps CW nets for relay work. Where the system still falls down is at the
ultimate delivery sites. Traffic hangs around on destination BBS systems
way too long in many cases.

> Anyone who thinks data throughput is the purpose of amateur radio hasn't
>read the first part of Part 97.

I've read the first part of Part 97, I don't see in there anywhere a
mandate to preserve antique methods. On the contrary, I see in there
statements about advancing the radio art, public service, expansion
of the reservoir of trained operators and trained technicians, and
maintenance of international good will. Increasing our capabilities
by increasing throughput seems central to our charter.

> Amateurs as a group used to be people who found creative and innovative
>ways around communications problems. Now it appears the group has turned to
>whining that they're not getting their way with their chosen mode of
>operation, and demanding that everyone else get out of their way.

Indeed, amateurs once led in advancing the art by finding creative
and innovative ways to communicate. Today many seem stuck in trying
to preserve the past instead. IMHO there is still room for the *hobbyist*
who wants to preserve antique methods by using AM or CW on the amateur
bands, but that's not the central purpose of the amateur radio *service*
and doesn't deserve preferred status on the bands.

What spirit would that be, Jack Daniels? I think you've missed the point. Communications has evolved from isolated people manning their spark stations out in the barn to a world where cooperating networks and systems dominate communications. Amateur radio no longer leads in advancing the art. Today we lag the work of the commercial providers because we insist on competing with each other rather than cooperating in setting up systems to advance communications. Networking is at the cutting edge of communications technology. If we are to regain our place as people working to advance the art, then we must learn to build and operate complex networks. After all, the ARRL was formed as a *relay* network first, it's role as a DX club came later.

The following is a list of informational files for this newsgroup
available via anonymous FTP from ftp.cs.buffalo.edu (currently at IP
number 128.205.32.9) or the Australian mirror at grivel.une.edu.au
(currently at IP number 129.180.4.7).

Questions to bowen@cs.buffalo.edu

1750m.band - misc info on the 1750m band
222xvtr.zip - PostScript code for KH6CP no-tune 222-MHz transverter
ampr_coordinators - coordinators for packet IP addresses
antenna_refs - references for articles about antenna designs
arrl-logo.ps - ARRL logo in PostScript format
arrl_bib - bibliographies from ARRL literature (ASCII format)
arrl_digital_minutes - Minutes of the ARRL committee on digital comm.
arrl_fo_jobs - descriptions of some ARRL Field Organization jobs
arrl_info_service - announcement of the ARRLs trial information service
cal_pd_freq - California police frequencies
callbook.tar.Z - sources for the marvin callsign server v1.3
canadian.Z - Canadian ham database in FCC format
carpet.loop.2 - Antenna for apartments and small spaces
clubcalls.Z - database of US ham clubs
comb6.zip - HF Propagation Predication program
docket_91-36 - information regarding the proposed scanner regs
dxcc-k2di - ARRL DXCC country list
element_credit - rules about VE credit for earliers exams
elmers_admin - information about the elmers list (see below)
elmers_list - list of elmers on the network
exam_ops - info on exams and exam opportunities
faq_callsign - frequently asked questions about the callsign server
faq_ham_1 - frequently asked questions about ham radio (pts 1)
faq_ham_2 - frequently asked questions about ham radio (pts 2)
faq_ham_3 - frequently asked questions about ham radio (pts 3)
faq_packet - frequently asked questions about packet radio
faq_shortwave - frequently asked questions about shortwave
fft.com - EGA/VGA DOS command for spectral display (QST 1/92)
ffth.com - Hercules DOS command for spectral display (QST 1/92)
field_day_92 - field day rules for 1992
florida_antenna - Florida State antenna law info
guide2newsgroups - description of USENET newsgroups dedicated to radio
ham_sat_sum - summary of information needed to get on satellite
hams_on_usenet - list of ham operators and e-mail addresses on the net
```

hamstacks - information about the question pool stacks
handicap_waiver - info on obtaining a handicapped test waiver
hf_rigs - QST reviews of available HF rigs
ht_info - general information about commercial hand helds
icom_ic_w21at_mods - increases the number of bands on an Icom IC W21AT
intro_to_swl - info for aspiring short wave listeners
intro_to_scanners - info for aspiring scanner listeners
jlem.zip - Program, w/source, for 2kx8 ROM emulator (QEX 1/93)
j-poles - description of j-pole antenna made from twin-lead
lead_acid_batteries - essay on lead-acid batteries
license_plates - guide to ham calls on license plates
logos - PostScript logos for various ham organizations
mail_order - a database of electronic mail order shops
manufacturers - names and addresses of ham gear manufacturers
mav11.ps - postscript image of MAV-11 amplifier PCB (QEX 9/93)
motorola_ge_service_man - how to get service manuals for Motorola and GE rigs
nasa_select - places where you can hear NASA SELECT broadcasts
new_packeteers - helpful essays for new packeteers
newcomers - tips and hints for those new to amateur radio
nprm_93_85_text - text of docket 93-85 (message forwarding systems)
packet_clubs - organizations you can get more packet info from
packet_gateways - list of gateways from packet to Internet
packet_misc - miscellaneous packet info
packet_software - list of packet software versions
phone_bbs_list - phone BBSs for ham related issues/software
pio_handbook - ARRL Public Information Officer's Handbook
pr_docket_92-136 - text of FCC PR Docket 92-136
qsl_bureau1 - information about the ARRL QSL bureau
qsl_bureau2 - "what should I do if" list for the QSL bureau
qst_prodrev - index of ARRL product reviews in QST
quest_pool_novice - novice question pool - good after 7/1/93
quest_pool_technician - technician question pool - good after 7/1/93
quest_pool_general - general question pool - good before 6/30/94
quest_pool_advanced - advanced question pool - good before 6/30/95
quest_pool_extra - extra question pool - good before 6/30/96
repeater_map_proj - description of Electronic Repeater Mapping Project
rfi_tips - good posting about RFI
sol_geo_data - desciption of daily solar geophysical broadcasts
sol_terra_terms - glossary of solar-terrestrial terms
sstv_wefax_info - general help for SSTV and WEFAX users
tasm.zip - table-driven assembler for weavrdsp.zip file
usenet_purchases - tips on buying and selling via USENET
weavrdsp.zip - src to "Weaver Method Modulator Using DSP" (QEX 9/93)

For readers of this newsgroup both new and experienced, these files are a de-facto "Required Reading List" to provide definitive answers and pointers to other sources for questions that come up in this forum.

This is also your archive, so any additional articles, guides, or small PostScript graphics that you feel would enhance this collection are most welcome. Submit to Devon via his E-mail address above.

Thanks go to Devon Bowen, KA2NRC, for providing diskspace and maintaining these valuable archives, as well as all the authors who wrote and submitted the information contained in them.

Additional archives out there that have /pub/ham-radio directories are encouraged to "mirror" these files to provide redundant storage for these documents. Some of these sites (which may or may not mirror ftp.cs.buffalo.edu) include:

Revision: 1.4 06/30/93 12:04:14
Changes: new rec.radio.amateur.* newsgroups, cs.utexas.edu gateway

(Note: The following is reprinted with the permission of the author.)

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info,
and rec.radio.swap newsgroups. It is intended to serve as a guide for the new
reader on what to find where. Questions and comments may be directed to the
author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@oac.hsc.uth.tmc.edu. This message was last changed on 30 June 1993 to
add the groups created during the latest reorganization vote and the
description of the cs.utexas.edu gateway.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

As the net grew, and as packet radio came into vogue, packet discussion began
to dominate other topics in the group and on the list. This resulted in the
logical solution: a group was created to hold the packet discussion, and
another corresponding mailing list was created as well: net.ham-radio.packet
and PACKET-RADIO, respectively.

These two groups served for several years, and went through Usenet's Great
Renaming essentially unchanged, moving from net.ham-radio[.packet] to
rec.ham-radio[.packet]. Readership and volume grew with the rest of the
network.

The INFO-HAMS mailing list was originally run from a US Army computer at
White Sands Missile Range, SIMTEL20. There were few problems with this
arrangement, but one was that the system was not supposed to be used for
commercial purposes. Since one of hams' favorite pastimes is swapping
gear, it was natural for hams to post messages about equipment for sale
to INFO-HAMS/rec.ham-radio. This ran afoul of SIMTEL20's no-commercial-use
restriction, and after some argument, a group was created specifically
for messages like that: rec.ham-radio.swap. This group wasn't gatewayed to
```

a mailing list, thus avoiding problems.

While all this was happening, other folks wanted to discuss other aspects of the world of radio than the personal communications services. Those folks created the rec.radio.shortwave and rec.radio.noncomm newsgroups, and established the precedent of the rec.radio.* hierarchy, which in turn reflected Usenet's overall trend toward a hierarchical name structure.

The debate between proponents of a no-code ham radio license and its opponents grew fierce and voluminous in late 1989 and 1990. Eventually, both sides grew weary of the debate, and those who had not been involved even more so. A proposal for a newsgroup dedicated to licensing issues failed. A later proposal was made for a group that would cover the many recurring legal issues discussions. During discussion of the latter proposal, it became clear that it would be desirable to fit the ham radio groups under the rec.radio.* hierarchy. A full-blown reorganization was passed by Usenet voters in January 1991, leading to the overall structure we now use.

After the reorganization, more and more regular information postings began to appear, and were spread out across the various groups in rec.radio.*. Taking the successful example of the news.answers group, where informational postings from across the net are sent, the group rec.radio.info was created in December, 1992, with Mark Salyzyn, VE6MGS, initially serving as moderator.

In January, 1993, many users started complaining about the volume in rec.radio.amateur.misc. This led to a discussion about a second reorganization, which sparked the creation of a mailing list by Ian Kluft, KD6EUI. This list, which was eventually joined by many of the most prolific posters to the ham radio groups, came up with a proposal to add 11 groups to the rec.radio.amateur hierarchy in April 1993. The subsequent vote, held in May and early June, approved the creation of five groups: rec.radio.amateur.digital.misc (to replace .packet), .equipment, .homebrew, .antenna, and .space.

The Current Groups

I can hear you asking, "OK, so this is all neat history, but what does it have to do with me now?" The answer is that the history of each group has a direct bearing on what the group is used for, and what's considered appropriate where.

The easy one is rec.radio.amateur.misc. It is what rec.ham-radio was renamed to during the reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes,

such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, has not been removed as of this writing, but it is obsolete, and you should use .digital.misc instead. The group has the .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is now rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there.

The first reorganization added two groups to the list, one of which is rec.radio.amateur.policy. This group was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. The neverending no-code debate goes here, as does the New Jersey scanner law, the legality of ordering a pizza on the autopatch, what a bunch of rotten no-goodniks the local frequency coordinating body is, and so on.

The other added group is rec.radio.cb. This is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently Mark Salyzyn, VE6MGS. The email address for submissions to the group is rec-radio-info@ve6mgs.ampr.ab.ca. Inquires and other administrivia should be directed to rec-radio-request@ve6mgs.ampr.ab.ca. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle

Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

The rec.radio.amateur.misc, .packet, and .policy groups, and the rec.radio.info group, are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server. The rec.radio.swap group is not available for reading by electronic mail. At this writing, the most recently added groups are also not available for reading by electronic mail, although that may change.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

Source record: 276290

Just purchased a Radio Shack HTX-202. Not a bad radio, all considered,
though I wish it could transmit a touch-tone sequence on each PTT (which
would parallel the receive-DTMF squelch). But, the manual stinks.

How do I put a different tone on each channel?

Are there any other hidden gotchas or features in this thing? It feels like
I've been given half a map to the Great Underground Empire.

> He helped MAKE that need before he filled it. It's possible that he
>helped make that need just so he COULD fill it.
> To me, it's no different than having defense contractors on the
>Congressional committees that set military budgets.

That's stretching it a bit, don't you think? Military budgets are funded by tax dollars, which we have no choice but to pay. Amateur radio, last time I looked, is a HOBBY funded by what little discretionary income we have left after paying for the military budget. :-)

If a person influences the defense budget so that his/her company can sell more defense goods to the gov't, that's illegal since those tax dollars are lining someone's pockets rather than being spent effectively.

However, in the hobbyist electronics sector, there are no tax dollars beyond sales tax (which you don't pay if you don't buy). Here, if you can create or enlarge a market for your goods, that's called good business sense.

So what's the problem?

- Radio Shack wins because they have a larger market.

- Ed Juge wins because of increased commissions.

- We win because we have more hams at a time when we NEED them.

- We win because we have more competition in the business, giving us better prices and better quality.

- We win because we can go to Radio Shack, JC Penney, whatever, and find low-cost radio gear locally.

Really now, is your gripe with Ed Juge/Radio Shack or with no-code?

>your operation on the air. Some hams also "snitch" on others, or even
>resort to vigilante action, but that's not what self policing means.

Right on as usual, Gary. If all of hamdom were as knowledgeable and as reasonable, there would be no problem. :-)

But getting back to reality, how do we deal with the problems we have? Personally, I try to be the best operator I can in spite of my inevitable mistakes and to avoid over-the-air controversy whenever possible. Perhaps our licensing classes should include a dose of good operating habits (repeater and otherwise) tailored to the local when necessary. Discussing politics & religion over the air (controversy!), for example, is something that can really get you zapped. It happened to a good friend of mine.

In rec.radio.amateur.misc, tskloss@zeus.tamu.edu (SKLOSS, TIMOTHY WILLIAM) writes:

>Here's the situation. A friend of mine was telling me the problem his mother >was having with a ham a few doors down. It seems that this ham transmits at >high levels; high enough to INDUCT SOUND TO COME FROM A TELEPHONE THAT'S >HUNG UP!

Is she sure he's a ham, not a CB operator? Some CBers use illegal power amplifers that aren't exactly "clean."

>IMHO, it's due to the cord between the handset and the wall unit (it's a >hang on the wall type with a long, ~3m unstretched cord to the handset) >close to his transmitting wavelength (or an appropriate fraction thereof). >The cord acts like an antenna, and the AM signal comes out of the telephone >handset speaker. Plus, there's interference on all the other appliances >such as her television and cordless phone. (we told her that he can indeed >hear her conversations as well as his other neighbors' cordless phones)

Maybe...depends on how close he lives and how well the signals from her (probably 49 MHz) telephone get out. I used to be able to hear my neighbor's cordless phone on my 6-meter Gonset Communicator III AM rig, but the guy lived on the third floor and my antenna was in the fourth-floor attic. I never heard a peep from any cordless phones outside my building.

>She says it's spooky because when it's quiet she can hear mumbling coming from >the hung-up phone and sometimes it's completly legible! What kind of affects >can that intense field have on other, more sensitive objects (like us!)?

It's probably not the ham she's hearing. Sounds more like ghosts to me.

>He [the ham] is aware of his interference because all his neighbors have >complained, but he persists that he's doing nothing wrong. His antenna >is a single vertical pole since antenna structures are prohibited in the >neighborhood. I assume that he's just below the maximum allowed output, so >the FCC can't touch him...

If he's running a legal power level and his signal is clean (within FCC specs), then he's right. It's not his fault. People who buy electronic gadgets and appliances that are insufficiently designed to reject undesired RF signals are simply getting jacked around by the manufacturers. Crummy telephones and cheapie TVs, stereos and VCRs are notoriously bad at blocking RF from hams, CB, broadcasters, etc. Most manufacturers have RFI/TVI techs who can advise the customer of a mod or might even retrofit a gizmo with necessary filters. The FCC will say "read the label on your appliance," which generally says that you have to put up with interference from licensed sources of RF at your own risk. A conscientious ham will try to investigate neighbors' complaints and

perhaps suggest fixes (or even offer to make them), but some people, not surprisingly, feel that they laid out good money for this doodad and that that %$#&!! ham shouldn't have any right to spoil the fun. Unfortunately, manufacturers of home appliances and entertainment equipment don't seem too worried about this. I imagine if they got more complaints, they'd design their gadgets right in the first place--or lobby for legislation to bust on hams more vigorously!

>Perhaps he's upset that they won't allow him to install his 50-foot tower
>in his backyard and he's trying to get back at everyone as long as he can...

Or he chooses to use the LEGAL limit of power output.

>The residents are trying for a legal injuction to limit his power
>output or halt his emissions all together, but that has turned out to be
>a long battle.

Not surprising. If he's licensed and operating within the limits of his limits, they can't stop him or make him use less power. That's the FCC's concern, and the Commission has already set the maximum power levels for US amateurs to use.

>Alas, what can we do about people who tarnish the image of amateur operators.
>It only takes one: We lost two repeaters (their prime location, actually)
>because someone (unknown if it was indeed a ham) stepped on water drain line
>and leaked water down the side of the building (or something like that, minor
>indeed). Now, no amateur services are allowed on the building, which happens
>to be one of the tallest in the neighborhood.

Doesn't sound as though whoever owns the property was convinced that there was a true need for an amateur repeater there, if that's all it took to get permission withdrawn.

>Tim (still waiting on call sign)

>for folks to get into amateur radio. The fact that Radio Shack (or
>Icom or Kenwood or Yaesu....) can profit from that change is irrelevant.

But the fact that two of the committee members had a conflict of interest
here (i.e., high-level people with an interest in selling mass quantities
of ham gear) is not irrelevant. You make it sound as though you believe that
the end justifies the means.
I don't give a good rip if Ed Juge believed in no-code since he was
knee-high to a dandelion; if he's influential in marketing in a huge
organization with a vested financial interest in seeing the no-code
proposal go through, it's a conflict of interest. The _least_ he could
have done would have been to decline, but recommend someone else he knew
who supported the proposal but had no vested interests elsewhere; I'm sure
he'd have been influential enough to get that person on the committee.

Hmmm... You make a good point there Cliff. While usually quite the
cynic, I have been known to have fits of naivete`.

I can see where there COULD be a conflict of interest and recommending
another person would have been a suitable way to handle such a condition
PROVIDING there actually WAS a conflict of interest. I cannot say as
I was not there. In fact, my only knowledge of the whole affair is
through your statement reproduced above. Perhaps another person on
the net can provide additional supporting information.

>I'm encouraged to learn that there is a ham that works for a mass marketer
>who is in a position to fill the needs of the amateur radio community.

He helped MAKE that need before he filled it. It's possible that he
helped make that need just so he COULD fill it.

Possible, yes. But I can not go so far as to agree that he had personal
gain in mind without more information. Some people are better able to
seperate their personal and professional lives than others. I doubt that
his family's welfare depended upon making that new market.

Perhaps the best person to answer that charge would be Ed Judge himself.
That failing, perhaps someone else that sat on that committee.

Lacking that, all we have are rumors and innuendo. While not foreign
to this newsgroup, it is something I am not very good at and will decline
further comment.

I beg your understanding.

>Hmmph. I'd like a specific quotation of the section of the Rules, the
>law, or other official document which specifies that a copy is illegal,
>what the penalties for violation of that rule is, and who enforces it.

Well, in Part 97.505(a)(1), the rules call for an FCC license, and in
97.505(a)(2) they call for a CSCE, whereas in 97.505(a)(3) they
specifically mention a "photocopy of a FCC Form 610..." I'd guess that if
the FCC wanted VEs to accept photocopies of licenses or CSCEs, they would
have likewise specified it.

>One of the local VECs has a reputation for trying to toughen things up--
>like administering the exams on a computer that doesn't let you go through
>and answer some questions and skip others, requiring the code test to
>differentiate between '16' and 'sixteen' in the "comprehension" part of the
>test, and the like.

Hmmm. Well, aren't the VEs responsible for ascertaining whether an
applicant truly knows the rules? Granted, FCC rules set out what the
examiners must test applicants for, but I think an examiner is permitted
some latitude in interpreting whether an applicant has demonstrated
that he or she actually knows the rules/code, according to Part 97.509(d)
and (e). (A VE can also optionally require that a candidate pass a code
sending test.)

>Some may think this is a good thing. I think it's not far removed from
>literacy tests for voters....

WHOA! Hold on a minute! Jeez--who'd want literate voters? Next thing you
know, we Americans would be electing halfway competent politicians!

: *self* part. What it means is you are supposed to police yourself in
: your operation on the air. Some hams also "snitch" on others, or even
: resort to vigilante action, but that's not what self policing means.
:
: Gary

Exactly!

But...to deal with this willful QRM or strange broadcasts...and stuff
that ALL of us here will agree is a no-no...THAT is the problem...
What is there to do (really do).....Nothing , right now?

Some of these jerks, use the visit you pay them (to ask 'em to please
cool-it) as a form of RST report:
(ah! I must have gotton to them...lookit all these guys *)

It used to be, that such a visit was plenty enough to make the guy stop.

That won't work anymore.

QSY? To where? In the case that I'm referring to, this guy dials after you
and waits for you to resurface...
We've changed bands...80, 40, 15, 10 2 and he knows no boundrys, so
wether or not it's an Extra freq or a Novice freq or cb ...he's there,
with a rig, or some home-wired power oscillator modulated by 60 cps, using
parts he gets from ham fests!

There's about 15 20 people now, who he picks on as often as he is able to
and none of us have had success with getting him to stop using legal
means.
The Radio Station (WFIF 1500kc) had to wait until one of their advertisers
bailed out due to the strange broadcasts % along with telephone harrasment,
so to be able to take him to court over the 'damages' aspect...not the radio
aspect.

* He actually said this later in one of his tirades on 10 mtrs.
% He Intermittantly gets on right after WFIF signs off at sun set and
does a 5 minute transmission, using...it looks like..250 watts on a loaded
wire in his back yard. 250 watts as determined by RF volts at 100meters.

I'm suprised no one has heard of his stuff....which includes bootlegging
others calls....he either pretends he's that person and carrys out a
normal QSO...or he uses foul language and acts like a cb'er....and signs
with who ever's call he feels like using.
(when he's behaving, he uses his own call!)
===
By the way...we traced his beginnings to where he used to harrass others
on his cb setup...he got his practice there, I guess.

So...what do we do? We are out of ideas...a few have LEFT the air due to it.

-
As to the TTY thing, that is another issue, easier to correct.

> firmly in the manual yellow pad stage. That puts us more and
> more into the irrelevant category.

This is only partially true. Where it is easy to find splinter repeater groups (or PRIVATE machines) in every area it also possible to find cooperative efforts. Two local efforts come to mind to prove the point. In my local area we tend to have ARES support organizations that organize to provide an infrastructure that ARES uses to accomplish their mission. There isn't one of these but several accross the different areas of the bay. I'm going to pick on one in particular that I'm most familiar with. The SVECS group supports a repeater that is the primary county organizing channel during an emergency. We use it for what is called a resource net employed in advertising the situation and lining up volunteers and equipment for the event we are trying to staff. OK, that is how the system is employed, now let me speak a bit about SVECS. This is a group of people that contribute money, get together 4 times a year at a breakfast and support a technical committee that takes care of the repeater...so far nothing unusual about that. Let's take it a bit farther. The members of SVECS consist of folks from multiple ARES jurisdictions? We are organized along city boundaries here so there is an EC for each city and a corresponding ARES group for the city. So here is a group of folks that have gotten together socially and financially but are supplying a support system yet they go beyond their local turf situation. The other interesting thing about SVECS is that it is run in sort of a benign dictatorship mode. The existing board of directors has sat there for alot of years with no real move to change em, or anyone wanting too. Lastly, when any ARES group wants to use the machine...they do...no asking...no clearing it with the power brokers of the repeater...they just use it. That is what makes it such a joy to be a member of the group, essentially no politics!

The other example that comes to mind are the various long-hall linking systems in place in CA. We have at least 3 systems I can think of that provide VHF/UHF linking up and down CA. (That is like linking Philly with Miami!) There are numerous repeater groups who have gotten together to make this happen. So there are successful cooperative groups in amateur radio. There is hope!

> It's true that many amateurs have mastered the art of soldering

> local agency's systems are? How many even know what it means to
> operate over a trunked communications systen?

Boy you walked into this time ;-) I can easily say just about ANY member of my local group and a fair precentage of the local

amateurs can do any of the above at the expert level...whoops...
but then I live in Sillicon Valley ;-)

Let me propose an alternative question... within most groups
is there a resevoir of such talent? Can someone in your
area that you can call handle an ethernet question, or knows
how to use a computer beyond just an elementary level?
That is a serious question to think about. I can take the answer
to the above for granted...but someone located in the middle of
Nebraska farm country probably can't.

> For most amateurs, the roles that they can fill *as amateurs*
> in the emergency communications assistance role grow smaller
> every year. To most agencies, we are just warm bodies who must
> be taught to *unlearn* our amateur habits before we are useful
> to the agency.

Well, we are warm bodies...and I can think of one active use of
amateurs locally where we have to form a corp much like John
has described in the past for said agency....that being the
California Dept of Forrestry..when we go out and help during
fire suppression efforts... but even then, while operating under
the Incident Command System(that employed in Tenn, Ky?) we tend
to operate our circuits in our own manner without any loss of
efficiency.

> If we're serious about filling an emergency communications role,

>
> Gary

Gary, I wouldn't argue the above. It seems that this mostly
comes down to politics and dealing with various peoples personal
ambitions in a structured way. The raw tallent is probably
hiding in there...you gotta go fish it out and organize it
usefully and cooperatively.

Any suggestions?

Steve KA6S

: -Tom R. N1OOQ randolph@est.enet.dec.com

I have to admit, I have a 2mtr set....so I've heard the same stuff too.....
ON REPEATERS! On top of QSO's.

Concerning packet / simplex....there ARE certain freqs 'set aside' for packet
use, and it's a good idea to not run voice there.
Packet can't HEAR you...most packet stations have NO speakers and so all you
are is a flash on a LED to such a station, that can't be connected to.
Packet is automated and will keep on sending til it connects...thus you
get relentless QRM.

Where are you trying to run simplex?
May I suggest 147.55---147.58 as a less congested place to go?
146.5xx region, I know is brimming full of voice-simplex and the 145 region
has a lot of packet...but the 147.55-147.58 (in my region) is hardly
used by any one, is not an input nor output for any of those repeaters.
Thats why, for what little 2mtr intercomming I do, I use that portion.

See? Thats yet another thing to consider, too.

Short-hop simplex may prove to be the lowest cost, best secure way to do it.
---providing the other issues are addressed and there's a way clear to do it,
at all.

This is going to involve somthing like 3 to 8 hours per nite, with possible
shift changes, coffee and 'nessesarys', and the communications that goes
along with that.
If there NO chit chat allowed,..only the passing of info up n down the line
then there'll be a minimum of inter QRM....and a minimum chance of a thug
using a scanner, to tell where evryone was/doing etc.
Add too, battery life conservation by minimum talking.
Add use of only simplex, you further improve all the above.

The only thing, is they'll have to set up so everyone is WELL within range
of at least 2 others, under all conditions of HT use:
held sidways, speaking too soft, in amonst branches and all that.
Rubber ducky antennas are LOUSY radiators, but they do make handling the rig
easier.
To not run the battery down, everyone on an HT would have to use low power
only/ long run time battery packs...not the '7 watt battery' ones.

PS
US Army used to use rigs that had 16 ft whips! Hows THAT for an HT!
Had to use a 1 1/2 volt or 7.5 volt battery and a 90volt battery, good
for a couple days...and you had to wear the set on your back.
Power out put was like 1/4 to 1 watt.

|> gist of it was as follows:
|>
|> 1) it's very, very bad to reverse polarity on a nicad. For this
|> reason, completely discharging a device with multiple cells is
|> very bad, because if one cell has slightly less charge than the
|> rest, that one cell will be charged backwards by the others.

There's no "if" here; there will _always_ be some cell slightly
less charged and/or of less capacity than its pack-mates.

|> [info deleted]
|>
|> 2) It's almost as bad to over-charge a nicad. This is where the

If you overcharge at the 10 hour rate or less, you'll seldom (maybe
never) see trouble from a little overcharging. I usually end up
overcharging my various batteries, and have not yet run into discharge
voltage depression, though it is "for real".

|> 3) There is a memory effect, in which a nicad which is charged
|> and discharged on a very consistent cycle will eventually reach
|> a state where it can no longer be discharged below it's habitual
|> discharge point. This effect is very slight, and was originally
|> observed in satellites

No, this effect is NON-EXISTENT under the circumstances and
with the battery types you have mentioned.

|> [more deleted]
|>
|> At any rate, it seems to me that the ideal nicad battery charger would operate
|> as follows:
|>
|> 1) all cells charged individually, rather than in series.

This turns out to be unnecessary in practice, though it is the
ideal case. You just have to be sure that overcharging is gentle.

|> 2) Deep cycle: discharge the battery at a fixed current until the
|> voltage drops to some threshold.

This should only be done if you have actually witnessed reduced
capacity. Otherwise, you're just using up a little of your battery's life.

|> 3) Charge: charge the battery at a fixed current until the
|> voltage climbs to some threshold.

No. The actual endpoint voltage is not uniform. On NiCd's you
can watch for temperature rise, a drop in cell voltage, or a drop in
the rate-of-rise of cell voltage (among others), and you should usually
combine a couple of the available methods.

|> 4) Maintain: hold the cell at a specific "full charge" voltage.

No. Hold the cells with a small _current_ that won't cause
overcharge effects to set in (the 50 hour charge rate might be good; the
optimum current will depend on the cells themselves and storage conditions).
If you try to hold voltage, temperature changes can cause increasing
current and thermal runaway, destroying the pack in an orgy of resistive
heating and outgassing (I have witnessed this).

|>
|> Does this make sense?
|>
|> As you've probably guessed by now, I'm planning to design and build my

|> be? (I'll be mainly using this to charge AA's for my camera gear.)
|>
|> Of course, a pointer to a consumer charger that does the same job
|> would be nice too.

If you want to build your own, get a rechargeable battery
handbook (or similar title) from General Electric, Gates Energy
Products (NiCd operations recently purchased by Eveready, so there's
a name change), or another vendor. There's much useful info there,
including that NiCd's like to be charged with lots of little pulses
rather than pure dc.

>proposal go through, it's a conflict of interest. The _least_ he could

What you are overlooking is that the committee was an *advisory*
committee only. The ARRL Board was in no way constrained to accept
the committee's recommendation. (In fact, the Board substantially
modified the recommendation of the committee, adopting the modified
proposal only after long debate and consultation with constituents.)
The ARRL's position was set by the Directors, none of whom, by rule,
are in the amateur radio business. The FCC was not constrained to
accept ARRL's proposal, either. (And they didn't; they adopted a
substantially modified proposal.)

>have done would have been to decline, but recommend someone else he knew
>who supported the proposal but had no vested interests elsewhere; I'm sure
>he'd have been influential enough to get that person on the committee.
>
>>I'm encouraged to learn that there is a ham that works for a mass marketer

>
> He helped MAKE that need before he filled it. It's possible that he
>helped make that need just so he COULD fill it.
> To me, it's no different than having defense contractors on the
>Congressional committees that set military budgets.

Congress regularly hears advice from interested parties, including
defense contractors. That's all that happened in this case: those
in a decision-making capacity listened to a number of parties.
Also, the FCC will entertain comments from all comers--including
commercial parties--on these issues. Now, if an representative
of an amateur equipment manufacturer were sitting on the Commission,
that could be a conflict of interest.

> And a high-paying job at the top of the totem pole at a major electronics
>marketer. That gets him bonuses for increased sales. Every time you sell
>an HTX-202 or HTX-404, you're putting money in his Christmas stocking...
> ...which would be fine if he hadn't been wearing that stocking during
>meetings of the committee that decided the no-code issue.

Hmmmm... I'm interested to hear that you know the details of Ed's
compensation package. Regardless, I've worked with Ed on the
Digital Committee, when he was the chairman of that group. Ed is an
honest and honorable person. I've no doubt that if he felt there
was a conflict between his professional duties and his voluntary
ones, he would have withdrawn. And I believe he possesses the
judgement and ethical standards to have made such a determination.
Suggestions to the contrary, offered without proof, are scurrilous
at best, slanderous at worst.

Frequently my call is miscopied as K2 instead of K0. Usually by Europeans
FWIW. Have the same problem when I operate contests from K0RF. K2RF has
not been amused by all the QSL cards he received. You would rather be
in NJ than zero land? :-)

IMHO you are a idiot if you use phonetic that don't work well. :-)
The golf in my call is a really weak phonetic. Listen to someone from
Japan pronounce foxtrot. When you are working weak JAs, with a *f*
in the call, almost any phonetic for *f* is better than foxtrot. I
usually go with the standard phonetics but in certain parts of the
world they don't work very well.

In the Oct 89 issue of RCM there is a design for a peak
detection charger which is a lot cheaper to build then
to buy a peak detection charger. I am currently working
on building a couple of them (to make it cheaper for my
friends and I.) I plan on keeping two or three for me.
One I will use for fast charging C sized batteries, and
another for medium speed charging A sized batteries/
fast charging 250 mAh batteries (ie radio and receiver
batteries.)
The only problem is that it isn't easy to change the
current, so I will actually need to fix that when building
the circuit. The main parts are: 1 power mosfet (IRFZ40)
and a 74HC4040. There is also a 7905, and an LM324, and a 5.1V
zener. The way I plan on building it, will also include a
7812 (12V regulator) and a heat sink so that I can plug it
into the car when driving and charge on the way to the field.
The only problem is that you need to run it off a battery or
a regulated power supply. Thats why I want the 7812 regulator
(plus caps etc.)

^^^^^^^^^^^^^^^^^^^^^^^^^

Offering to fix your neighbor's equipment is a BAD idea! Many states
have laws that restrict consumer-equipment repair to those who hold
state service-technician licenses. If the equipment you service ever
develops a problem, you will probably really regret having put the
fixes in. It is usually okay to install external filters, etc., but
even there a ham needs to be careful. I have a few reported cases of
hams who have fixed their neighbor's EMI problem, only to be blamed
a year later when the picture tube on the 25-year-old clunker finally
went bad. It was all because of that "doohicky" the ham had installed.

Brian also forgot to mention the ARRL "RFI Package", available for
a 9X12 SASE (98 cents postage appreciated) from the ARRL Technical
Department Secretary or via email from our automated email server
(info@arrl.org -- the file name is emi-gen).

A very sad fact of life is that there are Hams who build CB linear amplifiers
to order for anyone willing to pay.

> (deleted stuff about matched cells and bad experience)

Yes, it is very bad to reverse polarity a cell. That is why worrying to much about memory effect and draining a pack all of the time may case you MORE problems than it corrects.

> 2) It's almost as bad to over-charge a nicad. This is where the
> cheap R*d** Sh*ck charger I use is causing me problems.
> Detecting a full charge condition is rather tricky. This can be
> done by watching for a temperature increase in the cell, or a
> small voltage decrease towards the end of the charge cycle.

It you charge a sealed nicad at a .1C rate, you should be able to leave it on charge indefinitely. I have a cordless soldering iron on charge at .1C now, it is over 10 years old. The R*d** Sh*ck charger should be a .1C charger, so it won't harm cells. Fast chargers are another story.

> Charging cells in series can cause problems because some cells
> will reach full charge (and beyond!) before the others. Again,
> a prevention is to make sure all cells are a matched set.

If you charge them at .1C, and leave them on a longer than needed (at least 16 hours), you will balance the charge in all cells and not harm anything.

> 3) There is a memory effect, in which a nicad which is charged
> and discharged on a very consistent cycle will eventually reach
> a state where it can no longer be discharged below it's habitual
> discharge point. This effect is very slight, and was originally
> observed in satellites

Yes, the effect is very slight, but if you are flying a valuable plane, you should test for it. If you are always running your batteries down, you are taking care of it.

> 4) The prevention for the memory effect is to ocassionally put
> the cells through a deep discharge. However, doing this by
> running a device down completely with the cells installed can
> destroy cells (see (1) above.) For this reason, deep discharge

>Someone please correct me if I have any of the above wrong.

Pretty close.

>At any rate, it seems to me that the ideal nicad battery charger would operate
>as follows:

> 1) all cells charged individually, rather than in series.

What a hastle. You will probably have more connection problems than what you
fix in battery problems. (and NEVER parallel nicads during charge)

> 2) Deep cycle: discharge the battery at a fixed current until the
> voltage drops to some threshold.

Fixed or variable current doesn't matter, it just makes capacity calculating
easier at a fixed rate. It you use about 1.1 volt PER CELL as the cut off
point, you can discharge entire packs with little to fear from reverse charge,
and yet that is enough to get rid of memory effect.

> 3) Charge: charge the battery at a fixed current until the
> voltage climbs to some threshold.

If you use a voltage cutoff, you can never reach full charge. If your
voltage cutoff fails to detect that SMALL fractional voltage change, the
voltage will fall BACK DOWN and the charge will continue forever. Peak detect
chargers fix most of these problems.

> 4) Maintain: hold the cell at a specific "full charge" voltage.

Easy, just use a .1C charger and leave it on charge continuously.

>Does this make sense?

>As you've probably guessed by now, I'm planning to design and build my
>own charger -- one that does it RIGHT for a change. Can anybody tell
>me what the lower (discharge) and upper (full charge) voltages should
>be? Can anybody tell me what good discharge and charge currents should
>be? (I'll be mainly using this to charge AA's for my camera gear.)

Most .1C chargers do it right, Most FAST chargers DON'T do it right. As for
the voltages, they change with manufacturers and temperature. Use .1C (@ with
a 500ma AA, charge at 50ma) for 16 hours for charging. As for fast charging,
it depends on the cell type. A good fast charger would use temperature and
peak voltage detection.

>Of course, a pointer to a consumer charger that does the same job
>would be nice too.

|>
|> No, this effect is NON-EXISTENT under the circumstances and
|> with the battery types you have mentioned.

I had heard that there is a memory effect, but that it isn't exactly as described. If you pass the habitual discharge point when using (discharging the battery), you can expect a voltage reduction of about 10% at that point. If you have enough cells so that the remaining voltage is enough to power the load, the memory effect is not important. If you're cutting it close with just enough cells to provide the necessary voltage, the memory effect can be important (meaning you should probably always discharge fully before charging). I assume our Tx and Rx packs have enough extra voltage to handle the memory effect. This could just be a myth, but I doubt it.

2298. Anyone done mods to Kenwood TH-78A ??

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-15 18:23:09 UTC
From: William_A._Kirsanoff@ccmail.anatcp.rockwell.COM
Message-ID: <9308157481.AA748113789@smtpgty.anatcp.rockwell.com>

In an article, [pierce@ames.arpa] writes: o: info-hams@ucsd.edu

>Has anyone done extended receive and transmit mod. to a Kenwood TH-78A?
>I have the information on the mods from the mod-server, but there is a
>disclaimer at the bottom that says they haven't verified this mod yet.
>I would like to see if anyone has done this before I start removing
>surface mount diodes.

>Thanks, Terry
>KC5???

I did the mod to my 78A over a year ago removing 2 SMD diodes, it
worked fine, but I don't think that is the mod you want.

The original 78A's had a different microprocessor than the current
production units. That processor had a glitch and was replaced under
warrantee if the user complained. The units with the new microprocessor
had jumper wires that could be cut for the mod rather than removing the
SMDs. Look at your board, if you see green and blue jumper wires near
the diode array, you have a "new" style unit. Unless you bought yours
used from someone who got it a year or more ago, it is not likely to be
the older style. I don't have the actual mod instructions for the new
units, but I think the jumpers disable the same diodes that were
removed under the old mod. When Kenwood replaced my microprocessor, the
mods remained in place. The new mods are out there, so keep checking
the FTP sites if you want to be sure.

By the way, most mod sheets have some form of "do this at your own
risk" disclaimer, after all, the poster does not want to be responsible
for what you do to your radio. :-) Don't transmit out of band, and
don't transmit at all until your license comes in :-), and
congratulations on passing the test.

: >For the same reason a frequency can be tied up by two operators in QSO.
: >For the reason that they have the right to use those frequencies in the mode
: >they're using.

: I think you're missing the point. Sure particular frequencies can be
: tied up for hours by a couple of people, the issue is why should the
: message *system* be stalled by an antiquated net bottleneck. The
: answer is that it shouldn't of course. And in fact it isn't much
: that way anymore. Most message handling has moved to packet, AMTOR,
: and RTTY for speed and accuracy. That's largely replaced the Continental
: Corps CW nets for relay work. Where the system still falls down is at the
: ultimate delivery sites. Traffic hangs around on destination BBS systems
: way too long in many cases.

: > Anyone who thinks data throughput is the purpose of amateur radio hasn't
: >read the first part of Part 97.

: I've read the first part of Part 97, I don't see in there anywhere a
: mandate to preserve antique methods. On the contrary, I see in there
: statements about advancing the radio art, public service, expansion
: of the reservoir of trained operators and trained technicians, and
: maintenance of international good will. Increasing our capabilities
: by increasing throughput seems central to our charter.

Wrong...if you were designing the equipment that you are using, then I
would agree with throughput, but most Hams are only users. Advancing
the art is not being an appliance operator...

: > Amateurs as a group used to be people who found creative and innovative
: >ways around communications problems. Now it appears the group has turned to
: >whining that they're not getting their way with their chosen mode of
: >operation, and demanding that everyone else get out of their way.

: Indeed, amateurs once led in advancing the art by finding creative
: and innovative ways to communicate. Today many seem stuck in trying
: to preserve the past instead. IMHO there is still room for the *hobbyist*
: who wants to preserve antique methods by using AM or CW on the amateur
: bands, but that's not the central purpose of the amateur radio *service*

: and doesn't deserve preferred status on the bands.

An FIR filter can not oscillate. Since an FIR filter has no feedback paths, the conditions for oscillation do not exist. However, I would think that if you build an FIR filter which implements the impulse response of a very high-Q IIR filter which does tend to ring, the FIR will also appear to ring.

Isn't this true, Bob?

>that can really get you zapped. It happened to a good friend of mine.

Well it depends on what you mean by "zapped". I generally do *not*
avoid controversial topics on the air (anyone surprised?). But the
most zap I usually experience is a minor flame war on the subject.
That's expected, and not wholly unwelcome, where there's heat there
is often light. I never get excited, I never get mad, I just coolly
and rationally destroy my opponent's arguments. I've rarely experienced
real harassment, such as deliberate jamming. In the rare cases when it
has happened, I either reach over and turn up that big rheostat controlling
power, or come in on the control channel and laugh and make fun of the poor
jammer. :-) In persistent cases, there's always the DF gear.

Now there are degrees of "zap" I suppose. The most severe zap would
be someone coming looking for me with a gun. That's happened, but not
over amateur radio. I merely make sure I'm better armed, and a better
shot. It doesn't hurt if you can run and duck fast too. :-)

What are our problems on the bands?

1) Rude and inconsiderate behavior. That's pretty much a reflection
of society today. Manners are all but forgotten. The best I can
offer is the admonition to get used to it. Shunning the persons
with particularly bad manners, after telling them why privately,

can often correct the situation.

2) Foul language. That's almost a ditto of above. Get used to it.
If you happen to be the control op of a repeater, you can try
to bleep the offender, but it's rarely worth the trouble.

3) Deliberate jamming. This begins to get serious. In this case
it's time to exhibit your DF skills and track the culprit down.
If you can get help from the FCC here, good luck. Often a
mano to mano confrontation is required. It often helps if you
bring an angry crowd with you. (Muted muttering about getting
a rope is always a useful background for a rational discussion
of jamming technique.)

4) Threats of bodily harm. Take them for what they're worth,
act accordingly. It never hurts to be well armed.

5) What else?

Gary

I have a question regarding the use of my equipment near high tenson
power lines. I recently moved into a house that is near such lines
and was wondering what they will do to transmission/reception (havn't
had time to set up my rigs yet, still living out of boxes!)
I am sure they will have _some_ effect but not sure what, or how I
should set up my antennas. Anyone know?

Thanks
Brad

Oh, don't get me wrong, I'd get over my reluctance in a second if they'd
agree to share tower space with me. :-)

I'd also ruthlessly and unscrupulously use the tower as an excuse to
beat down the price on the property. Then I wouldn't worry about the
deflation of property value since I'd already taken advantage of it.
I wouldn't pay a premium for the property in expectation of recouping
it at a later date though. That would be ignoring reality.

2310. Question about ni-cads (was Re: need expert info on nicads.)

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-15 21:00:00 UTC
From: rossi@VFL.Paramax.COM
Message-ID: <1993Sep15.210000.9418@VFL.Paramax.COM>
Source record: 276232
Cross-posted to: rec.radio.amateur.misc,sci.electronics

I have a question about ni-cads....

Why has their never been a standard developed for ni-cad battery packs?

I can't figure out why every manufacturer needs to use his own custom,
proprietary, ni-cad battery pack. Years ago they settled on a set of
standard sizes (D, C, AA, AAA, and 9 volt, etc) for regular batteries.
Why can't they do the same thing for ni-cad battery packs???

Just think about it. Almost every camcorder uses a different battery
pack. Icom, Kenwood, Yaesu, Alinco, etc, each have their own custom
line of battery packs for their radios. You can't interchange them.
Why not? For the most part, electrically (inside) they are all identical.

Every flashlight uses common D or C cells. Most all portable radios,
etc, uses common AA cells or one of the other common sizes. But when
it comes to ni-cads they have to use a custom designed size pack for
each product.

Imagine if every flashlight needed a different size battery. WHAT A MESS!!

Just a thought.

Marc,

How fast do you typically copy code? Many people who write dots and
dashes have a plateau around 10 wpm.

The Service is also self-policing in the sense that it's
self-investigating, at least in an ideal world. Hams with
interference complaints, for instance, don't require a lot of
investigative support -- the interloper normally gets DF'ed and the
enforcers get handed all the information.

But you're 100% right that `self-policing' doesn't mean
`self-enforcing.' Wish Uncle Charlie realized that more often.

I thought only feedback-type filters could ring. (ie IIR filters) I don't
see how an FIR filter could ring, and they have linear phase response.

Of course, it takes a lot more "taps" in an FIR filter to get the job done
compared to an IIR filter. And processing power.

> The Equip. involved HT's (all kinds) and Car sets, and a few Home sets.
>and was done on 4 simplex freqs.

Our group has two modes:
patrol mode, where we use a base with good coverage of the area (i.e. a good antenna on top of a building) working thru a repeater (since our patrol area covers about 38 sq. blocks), but where the base can hit all of the patrol units on simplex;

event mode, where all portable units are running simple and an event base is able to hear and hit all units (and usually all of the portable units can hear/hit each other).

A radio base is a really important thing. It lets patrollers in the field do what they have to do -- patrol -- and makes the base responsable for relaying messages between teams (except in tactical situations) and getting hold of the police when they are needed (which can also be quite time consuming). The base also keeps a running log of all reports from patrols which is useful for both analyzing how the patrols are working and CYA if something bad happens and people start shooting lawyers at each other.
We've used this scheme to manage up to five different patrol teams at once, using base operators with little or no training, at events with tens of thousands of attendees, where we were providing event security and first response aid services. And its worked quite well for what we have to do.

We do not use amateur frequencies but the operational principles are the same. A good reason not to use amateur frequencies is that you have no protection if a local news organization wants to feature your group's latest expolits on the evening news (as in, you did something wrong and they are going to play the transcripts). Also, in a chase, patrollers can, uh, use harsh language, and thats a problem you also don't need on the amateur band (such language is not legal on any other band either, but you're less likely to have to deal with the opinions of the amateur lawyers).

> Prio r to a nite of watch, they'ed tell PD who was going to where/cars etc,
>so PD would know they were'nt someone out to make trouble.

Actually, the reason to let the PD know is to get a 'fast' line thru the dispatch system. You can get hung up for a long time on 911 when being able to call the district station desk can get you instatn response. The field officers are either going to appreciate you or think you're an amatuer trying to steal their job -- and there is little you can do about that.

>PROBLEM! N O W adays...with 'stalking' laws....such watch groups could
>be viewed as a form of stalking!
>So...they'ed want to check with the PD on all those issues 1st, before they
>start spending money on rigs that might be spent on another band...

The way that you solve this problem is to have uniforms. Doesn't have to be much, just a colored hat and/or a T-shirt with "Everytown, USA Community Citizens Patrol" on it. And everybody in the patrol wears them. The truth is that if you don't have some sort of *visible* presence, the whole community patrol idea doesn't work. 'Take a bite out of crime' signs are all well and good, but the florescent green hats and shirts of the Haight-Ashbury RAD group have made much more impact. And no one thinks of them as 'stalkers' -- except perhaps the mutants.

>is what makes it such a joy to be a member of the group, essentially
>no politics!

Well that's good, but a simple repeater system isn't what I meant
when I talked about modern cooperative communications systems.
We have several wide coverage machines here in the Atlanta area
that are always available for emergency use. The North Fulton
machine that John made fun of is one. (It really does sound like
something from Star Wars, but that's another story.) The
Bell Pioneer machine is another wide area system that's always
available for emergencies and public service events. The Pioneers
are very aggressively into public service. They host a major
packet node and traffic BBS system. They have a well equipped
communications trailer. Etc. And of course there are the mainline
clubs like the Atlanta Radio Club and the Stone Mountain club.
Both support emergency services, though both are currently
plagued with technical problems. And there's GARS, a very
public service oriented suburban group. Even my little KE4ZV
machine has a 500 kW backup diesel generator, 1500 gallons of
onsite fuel, and good coverage from it's 1000 foot tower in case
the balloon goes up. :-)

There are more, but I'd slight somebody if I tried to name
them all. It's sufficient to say that closed machines that
don't welcome emergency service are definitely *not* the
norm here. I know of only 2 really closed machines, and
neither gets out of it's backyard effectively.

But none of this is linked with ARES. In fact ARES eventually
got chased off the North Fulton machine as a place to conduct
their drills, though they're still welcome for real operations.
That's a personality problem with the ARES leaders pure and simple.

>The other example that comes to mind are the various long-hall linking
>systems in place in CA. We have at least 3 systems I can think of
>that provide VHF/UHF linking up and down CA. (That is like linking
>Philly with Miami!) There are numerous repeater groups who have
>gotten together to make this happen. So there are successful
>cooperative groups in amateur radio. There is hope!

Well we have the Big Shanty system with links from Atlanta to
Chattanooga (and beyond I think), and another linking group
that routinely ties a network together from Nashville to Jacksonville
with stops in Alabama. But it's all very ad hoc and iffy. There are no
systems in place to use it effectively. No formal tie ins with ARES.
In fact I'd say the ARES leadership probably isn't even aware the systems
exist. More importantly, there are no trunked systems, there are no
systems that can link into agency communications in time of need. There
are no zoned or cellular systems. It's all 30 year old FM voice technology,

mostly using 30 year old surplus commercial radios. You can't grab a radio
at the State Emergency Management Center and have an automatic linkup with
the EC in Rome. Athens is off the map. And if you need to contact the coast,
or places below the gnat line, better hope Ma Bell is working.

>> It's true that many amateurs have mastered the art of soldering

>to the above for granted...but someone located in the middle of
>Nebraska farm country probably can't.

Well we can take the answer for a given here too. At least among
the members of my group and others here in Silicon Valley East.
But that's not the kind of network I meant. Our local police
systems are 800 MHz trunked systems, data and voice, with
microwave links and computer supervision. I can only name *one*
amateur in our area with experience with trunked networks, and
he got that by working for the supplier. Only a few have test
equipment covering the band. Most hams don't have a clue. Even
shadow areas for normal repeaters routinely stump many hams.
There's no provision for an orderly handoff to another machine,
automatic *or* manual. And shadow zones are very common in our
rough terrain.

>> For most amateurs, the roles that they can fill *as amateurs*

>the Incident Command System(that employed in Tenn, Ky?) we tend
>to operate our circuits in our own manner without any loss of
>efficiency.

We don't have that here. Most ARES members haven't even heard
of the ICS, much less know how to operate under it. Monitoring
real situations, I frequently hear, "CALLSIGN DE Callsign I'm
here, what do I do now? CALLSIGN DE Callsign." " Callsign DE CALLSIGN
Well I don't know. I'll see if I can find somebody to tell me
what they want. Callsign DE CALLSIGN." "Hey! It's raining over here,
anybody bring a raincoat?" "CALLSIGN THIS IS CALLSIGN THE OFFICIAL
ARES CONTROL STATION. STOP MAKING UNIDENTIFIED TRANSMISSIONS.
CALLSIGN." "Hey Joe, I got a spare raincoat. Where you at?" "CALLSIGN
CEASE TRANSMISSION CALLSIGN." And so on ad infinitum.

If I knew how, I'd be out doing it instead of here typing. :-(
Getting cooperation *before* the emergency is the hardest
job a ham can have.

Gary

>in extreme cases, explosion.

This isn't always safe advice. I had a battery rupture that was on a
45 ma trickle for a year. Overnight is probably fine, but forever is
a bit too long to keep a Nicad charging. Even at 45 ma they do eventually
dry out and fail. I've had HT packs sitting in the trickle charger for
a couple of weeks that didn't have any capacity when I tried to use
them. And they were relatively new packs too. Unlike lead acid cells
which will quickly die if not kept charged, Nicads are best stored
discharged. If stored charged, they usually lose about 10% of their
charge per month. I wouldn't trickle at a higher rate than that if
I were going to leave them on charge forever. Note that that's not
C/10, that's C/720. Any time you overcharge a Nicad, you cause
outgassing, however slight, and prolonged overcharging, even at a
trickle rate, will damage the battery.

>have enough extra voltage to handle the memory effect. This could just be
>a myth, but I doubt it.

Yep, the official name for this condition is "voltage depression". The amps are still in there, but some equipment will shut down because it senses too low a voltage. So you never get to use the capacity. Doing a deep discharge eliminates the depression point. But remember, deep discharge of *packs* is dangerous because the weakest cell may reverse. It's best to deep discharge individual cells. That way you can safely go all the way down to zero volts.

2322. Radio Shack HTX reports ?

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-15 23:58:02 UTC
From: ODONNELLP@MAR65.MAR.ORA.FDA.GOV
Message-ID: <930915195802.3dd2@MAR65.MAR.ORA.FDA.GOV>
Source record: 276271

Rich asked:

>Where is the HTX- HT made ?
>Does anyone know where the Radio Shack HTX handies are made ?
>Are they made in the Far East under license or Stateside ?

Answered elsewhere by someone who apparently knows.

>How LOUD is the audio on these suckers compared to an Alinco DJ-580 ?

Very loud! I don't have a sound level meter and never saw a DJ-580 but
I can tell you its almost as loud (without distortion) as the smaller
mobiles. Comparing it to my 2SRA (which is awful puny) its no contest!
As I said earlier, I've heard no other HT with comparable audio, except
the Motorola's (which are still superior).

To all radio amateurs

SB SPCL ARL ARLX019
ARLX019 New 902 MHz benchmark

On August 23, 1993, KH6HME and N6CA set a new 902 MHz
terrestrial distance record of 2469 mi (3973 kM),
according to N6CA. The contact, with signals just out of
the noise, came at 0136 UTC, on CW. For the next four
hours the pair tried unsuccessfully to make contact on
2304 MHz. 144 MHz was used for liaison. Chip Angle, N6CA,
built the gear.

SB SPCL @ ARL $ARLX020 ARLX020 Japan eases alien rules
ZCZC AX29 QST de W1AW Special Bulletin 20 ARLX020 From
ARRL Headquarters Newington CT September 10, 1993
To all radio amateurs

Japan has made it easier for amateurs from other countries
to operate there. On June 16 Japan revised its radio laws
to allow foreign nationals who hold Japanese Amateur Radio
operator licenses to establish and operate their own radio
stations in Japan even if they are from countries not
having a reciprocal operating agreement with Japan.

Amateurs operating under the new arrangement will be
issued ''7J'' prefixed-call signs, good for five years.
Applications are taken by the International Section of the
Japan Amateur Radio League (JARL). (Thanks The JARL News.)

2325. ARLB096 Rules change opposed

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-16 00:33:53 UTC
From: marcbg@feenix.metronet.com
Message-ID: <arlb096@ampr.org>
Source record: 276257
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

OtSB QST @ ARL $ARLB096 ARLB096 Rules change opposed ZCZC AG38 QST de W1AW ARRL Bulletin 96 ARLB096 From ARRL Headquarters Newington CT September 11, 1993 To all radio amateurs

The ARRL has gone on record in opposition to a proposal by the ''Rules Committee of the National Conference of Volunteer Examiner Coordinators'' (NCVEC) that would require a ''contact'' volunteer examiner be appointed for each examination session, who would have ''overall'' responsibility for the session.

In comments filed August 30, 1993 to the proposal (RM-8301), the League said that the concept of having three examiners share liability for exam sessions' integrity has worked well since the inception of the volunteer examiner program in 1983, and that the benefits of the three-person team would be diluted by the NCVEC proposal, if adopted.

The League said that the FCC's original Notice of Proposed Rule Making more than ten years ago suggested a three-person team with a ''team chief'' who must be an Extra Class licensee. That idea was abandoned in favor of an ARRL proposal that a Volunteer Examiner Coordinator system be established (in FCC Report and Order 83-433, which enabled the VE program).

The League said that it should be left to individual VE teams to designate a ''team leader'' if they wish, ''but in no case should the concept of a joint and several liability of the three-examiner team members be diluted.''

The NCVEC proposal came out of the Conference's annual meeting in June, 1993. The ARRL-VEC was represented at the Conference but was not a party to the decision to make the proposal to the FCC.

QST de W1AW
ARRL Bulletin 97 ARLB097
>From ARRL Headquarters
Newington CT September 12, 1993
To all radio amateurs

SB QST ARL ARLB097
ARLB097 Club calls action urged

The ARRL has responded to complaints filed against it by the W5YI-VEC Inc. and the National Amateur Radio Association, in the matter of choosing administrating organizations for a proposed club and military amateur station call sign program.

On August 5 the ARRL told the Commission that it saw defects in the applications from four other groups, (W5YI-VEC Inc., the NARA, the Quarter Century Wireless Association, and the Southeastern Repeater Association), and reminded the Commission that there is no requirement that more than one administrator be named -- ''nor any advantage to be gained from doing so.''

In response, the W5YI-VEC and the NARA filed ''Motions to Strike'' the League's filing. The League told the FCC that it believes the Motions have no basis.

The League's Consolidated Opposition calls ''startling'' an allegation of W5YI-VEC that the League ''lacks standing'' to oppose other groups' being call sign administrators.

''Suffice it to say,'' the League said in its Consolidated Opposition, ''that the League continues to oppose the self-promotional efforts of unqualified or less qualified organizations to overly complicate and detract from the efficient private sector administration of club and military recreation station call signs...

''Amateur radio clubs and military recreation stations deserve better,'' the League said.

The League said that the W5YI-VEC and NARA motions to strike ''are no more than an effort to defend (their) defective applications ... there is absolutely no basis whatsoever for striking the League's opposition, and those motions should therefore be promptly

dismissed.''

No new club or military recreation station call signs have been
issued since 1977.

AMSAT-CE

The "Fundacion de Desarrollo de Satelites de Aficionados a las Radiocomunica-
ciones" AMSAT-CE is a foundation created by the Chilean Federation of Radio
Amateurs Clubs on April 23, 1992

Its objectives are scientific and technological in nature and are espected to
be realized in the design, construction, launch and operation of amateur radio
experimental satellites, in the transfer of technology and in other experiments
related to space communications.

AMSAT-CE is a non profit amateur organization which is directed by a Council
composed of nine members, all of them licensed radio amateurs: CE 2 MH Ignacio,
President; CE 3 LD Italo, Vicepresident; CE 3 AFC Axel, Secretary;
CE 2 HI Carlos, Treasurer; and CE 3 MVK Victor, CE 3 GA Eduardo,
CE 3 EOA Patricio, CE 3 AYS Mario and CE 5 NG Klaus, Counselors.

Its first proyect CESAR-1 will be implemented using the new AMSAT-NA satellite
bus concept known as "Microsat". An agreement for joint cooperation between
AMSAT-NA and AMSAT-CE was signed on January 20, 1993.

The address of AMSAT-CE is:

Avda. Portales 4040, Casa 439
P. O. Box 40 Correo 5 Santiago
Telephone 56 - 2 - 773 7831

More like something to ignore. You aren't guarding Fort Knox or the
Bank of England, you're providing a neighborhood presence to *deter*
crime thru threat of apprehension. The mutants aren't going to spend
hours in their cars, playing COMINT games trying to determine where you
are, they will just see you out there and move along. Well, they might
try to mindf*ck you first, but regardless they aren't going to spend hours
with a scanner trying to find out which repeater you're using.

From: sakkascb@ucunix.san.uc.edu
Message-ID: <278trm$10e@ucunix.san.uc.edu>
Source record: 276268

Hello,

I am a member of W8YX - the Univeristy of Cincinnati Amateur Radio Club. Over the last few years, we have been struggling to increase activity in our club. Now with membership increasing, we may be facing other struggles that will determine the survival of the club.

What I am looking for is any information any of you may have that relates to the historical significance of W8YX. We do have logs that date back to 1924 and have found newspaper clippings with some historical information. It is also believed that W8YX is the first amateur station in Cincinnati to have contacted a moving aircraft. We would like to compile a more complete history of the club.

Any information that you may have would be greatly appreciated.

Thanks!

Chris B. Sakkas

Executed: Wed Sep 15 23:59:21 1993

HAM-server@GRAFex.Cupertino.CA.US

Index of files.

NOTES: ----------------------------------------------------------------------

If you do not know how to use HAM-server, send email to
HAM-server@GRAFex.Cupertino.CA.US. In the text, place HELP.

If you order a file and do not get it, check the index to be sure you have
spelled the filename correctly. If you have ordered the file correctly,
then order a new INDEX, as I may have moved the file to a different
directory. The system is still expanding, and I am trying to keep it in
managable chunks.

Also, if you have ordered files from HAM-server and do not receive them, it
might be because your return path is incorrect. My bounce mailbox fills up
quite regularly with bounce messages. And, since the path is incorrect, I
cannot contact you to let you know.

Orders must be sent to HAM-server. Orders sent to KA6ETB or HAMSinfo are
ignored. If you are reading this from usenet, do not respond to this post.
You must send email.

A new INDEX is automatically generated weekly and when files are moved or
added.

/hamradio/newfiles/ contains files that have not yet been categorized. You
can order a list of newfiles by sending the following in an email.

NEWFILES <date>

<date> is in the form of MM-DD-YY, and is required.

The archives may contain the same file under different names. If you should
run across one of these, please let me know with email to
KA6ETB@GRAFex.Cupertino.CA.US

> No, this effect is NON-EXISTENT under the circumstances and
>with the battery types you have mentioned.

[Cue religious debate :-]

This effect does exist - I know because I've observed it.

I bought my RC gear a year-or-so before I was finally in a position to get back into flying, and during that period I would occasionally give the batteries a top-up charge. Before using the gear in anger I bought a cycler - it discharges the pack to a safe low level, lighting an LED bar graph as it goes, and then recharges the pack.

On the first cycle (after an overnight trickle charge) the RX battery managed something like 60% of its stated capacity, on the second it managed (I think - this was some time ago) 80%, and only on the third attempt did it manage 100%. The TX battery behaved in a similar manner.

So yes, the effect is real - a fact that I thought was generally accepted nowadays...

2334. Need help - wiring Icom remote mic

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-16 11:08:29 UTC
From: dtock@nyx.cs.du.edu
Message-ID: <1993Sep16.110829.12479@mnemosyne.cs.du.edu>
Source record: 276260
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.equipment

I have an Icom IC21, and am trying to connect a headset to it.

I would like to wire the headset through a switch box with a PTT in it, but I notice the Icom mics (ie HM75) have up down and band select buttons as well.

Given that all the connections are through the mic and ext speaker jacks, that makes 5 switches, a mic and a speaker, all wired through 3 leads. plus ground and supply! I guess it is all done with resistors and capacitors (the mic isn't active is it?)

OK. So hows it done. Does anyone have a schematic for the HM75 or similar? Has anyone opened up theirs and can describe it for me. Basically, how the heck does it work???

Any information appreciated, even if it is based on other manufacturers, as it may be relevant. I have studied the circuits, but can not figure it out from there alone.

Thanks and 73s

David (GM0SYA)

2335. S21ZD and DXCC status

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-16 11:36:00 UTC
From: R.G.Harris@sheffield-hallam.ac.UK
Message-ID: <2C984FFF@cerberus.shu.ac.uk>
Source record: 276217

In September last year I operated as S21ZD from Bangladesh. In the week of operating that I was allowed I made some 1000 contacts. Many of these QSOs have now QSLed and I get the impression that in most cases one of the main motivations is to get S2 for DXCC. In this months RSGB magazine Radio Communications I notice a short report that S21ZK has had it's operation approved for DXCC purposes. Now the question. If S21Zk found it necessary to get his operation approved and he operated after I did, then do I need to do the same?

I do not want anyone to send in a card from myself and then have it returned as not acceptable because I had not had the operation approved.

Can someone advise me please on whether I need to contact the ARRL and if possible, who. All the necessary documentation is available if it is needed

Thanks

Bob Harris G4APV / S21ZD / VK3EVP

>experience with this?

I had the same experience recently. My brother and I bought some items
and the store manager put the hard-sell on the TSP service plan.
He explained how it would REPLACE either unit whether dropped,
or by whatever accident. He even mentioned dropping it in water!
Later at home, I read the fine print too.
Of course they get primo commission for selling these TSP's.

rossi@VFL.Paramax.COM (Pete Rossi) writes:

>I have a question about ni-cads....
>Why has their never been a standard developed for ni-cad battery packs?

I'll bite. We've had several Icom H/Ts around the house and it was very neat that the 4AT could always could on borrowing from the 2AT went needed, etc. On the other hand, that pretty much dictated the _size_ of the radios. When my spousal-unit bought the Alinco DJ-580 I was a little miffed that it wouldn't accept the battery packs from my DJ-160. (On the other hand that was a good excuse to go buy my own DJ-580 :-) Of course, the 580 is smaller and lighter than the 160, the battery packs seem to click on solidly and are somewhat stronger plastic; the rounded edges of the pack allow me to slide the H/T into pockets that would otherwise rip out, etc.

As for cross equipment compatability, think of what the form factor limitations would be if your handi-cam and your H/T and your cordless razor and your rechargeable flashlight all had to accept the same battery pack. Not that it couldn't be done, just that rigid constraints dramatically affect design, mostly to the negative (remember the DOS 640k boundary?). The primary impact on amateurs might best be seen in the downsized H/Ts with full features available today; it would not be possible if the design constraint was to continue using the battery pack that fits my Icom 4AT!

Of course, to Kenwood, Icom, et. al. the consideration may be more bottom line: they'd like you to buy from them. And not just for the profit motive! All the makers of these H/Ts etc. want you to be very happy with the quality, durability, usability, etc. of their products. Mostly they feel that is best served if you are using products they have produced, tested, and can stand behind.

2340. followup on non-license purchase of HTX202

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-16 12:29:28 UTC
From: mellis@ramcad.pica.army.mil
Message-ID: <CDG5D4.LAH@pica.army.mil>
Source record: 276192

Well, after reading all the responses to my post about Radio Shack
selling me a HTX-202 while I'm "pre-license", I bought it. The only
question the R&S guy had was "how many do you want?".

Amazing what buying a radio will do to accelerate the studying process.
I took & passed the Technician 9/13. Cool. So now I'm "license in waiting".

Thanks to all who responded.

>>that can really get you zapped. It happened to a good friend of mine.

gary@ke4zv.atl.ga.us (Gary Coffman) writes:

>Well it depends on what you mean by "zapped".

Lots of consistent, long-term jamming (lots of DTMF garbage over the top of his QSOs, usually with his brother). It was pretty obvious who was doing it to begin with, and DF'ing confirmed it. The visit to the guy's house brought no positive results. (Gary only - if you want details, naming names, etc., send email and I'll tell you about it.)

> I've rarely experienced
>real harassment, such as deliberate jamming. In the rare cases when it
>has happened, I either reach over and turn up that big rheostat controlling
>power, or come in on the control channel and laugh and make fun of the poor
>jammer. :-) In persistent cases, there's always the DF gear.

I suggested much the same to my friend... that he and his brother get 160W linears for their cars & turn them on when the jamming started.

> The most severe zap would
>be someone coming looking for me with a gun. That's happened, but not

Oboy. You like living on the edge, huh? :-) I'm pretty well-armed myself, but thank God I've never had to shoot at anyone else.

Dana asks:

>An FIR filter can not oscillate. Since an FIR filter has no feedback paths,
>the conditions for oscillation do not exist. However, I would think that if
>you build an FIR filter which implements the impulse response of a very high-Q
>IIR filter which does tend to ring, the FIR will also appear to ring.

>Isn't this true, Bob?

That is the real deal. IIR filters have a feedback path and when they are high Q, they have little damping (there ain't no resistor in the path ;-). Some energy input in the pass band, even if it is noise causes the feedback to work really well for quite a while even when the excitation is gone. An FIR filter, having no feedback as you say will not have the ability to nearly oscillate and with the standard design packages, will not provide large lumps of gain bringing lower level noise power in the passband up several dB making it sound like a noisy oscillator running. You will indeed here colored noise but there is no possibility of unstable or ringing behavior.

Thank you for your post, I think I assumed a better understanding of the qualitative differences between IIR and FIR than you did and that was probably a good thing.

Bob

Source record: 276178

>I thought only feedback-type filters could ring. (ie IIR filters) I don't
>see how an FIR filter could ring, and they have linear phase response.

You are correct but the FIR filter will still filter noise energy power
in the passband and make it sound like colored noise. However this cannot
remotely approach what a really high Q IIR filter can do when excited with
energy in its passband. Because of the TINY coefficients need in high
Q IIR filters in DSP designs to have gains down near 1 (so the thing doesn't
run away with you), you lose a fair amount of the dynamic range. On 16
bit DSP processors, such as TMS32C15, I find this to be totally unacceptable
and do all kinds of grouping, shifting tricks, etc. to try and preserve
some of the needed precision.

The bottom line to me is, if you have the horsepower use an FIR filter
for your really narrow filters.

Bob

SALES SALES SALES SALES SALES SALES SALES SALES SALES SALES SALES SALES

The only word a property developer can hear....

While there's a bit of a recession on, let's make the most of it.

Visit a showhouse or two, and in passing, enquire about restrictions on external antennae etc. If you don't like the reply, just say, "Oh Well, that rules this place out then,..." don't lose your temper just look like a good prospect of a sale that walked out.

Let's give 'em the idea they're losing sales

and allow them to assume they're losing money.

Cheers,
David

I just did the extended receive mod to my late model TH-78A Tuesday night. 8/14/93. I was a little leary of cutting into it but it worked. There are two green wire jumpers in it labeled W1 and W2. It sounds like this is the same mod sheet the original poster had. I cut the one for extended receive and it worked great. It didn't even reset my memory which I thought it would. I also found that to get 800 Mhz you need to be on the uhf vfo, hit the vfo key, then push the F key over a second then the Band key. To get the 300 Mhz band, you need to be on the VHF vfo, hit the VFO key, then the F key for over a second and the BAND key. I didn't clip the other wire as I had no need to transmit there. No MARS/CAPS License.

(lot's of debate about the reasons for just about every radio and every manufacturer using different and incompatable battery packs deleted).

to which I throw in my $0.25...

what I'd like to see is battery packs which can be -readily- dismantled, and in which I could easily replace the cells with STANDARD "c" or similar nicads. It would make life -much- more civilized.

Also, related to this is my most recent peeve. Have you checked out the dc input plug on teh Icom W2A? Is there -anything else- in the world which uses that wierd assembly?

I just acquired a Heathkit HD3030 (Same a Flesher 470 TU) terminal unit for cw and rtty. I am looking for leads, reviews or views on software to run on an IBM PC Compatible to interface with this unit.

Any leads/comments will be greatly appreciated.

If you have used this or a similar TU, I would greatly appreciate hearing from you.

Thank you.

>use, and it's a good idea to not run voice there.

Yup, I'm following the ARRL bandplan. Some of the designated simplex sub-bands are completely useless in my area due to packet creeping in from the next sub-band. I guess some "gentlemen" weren't in on the "agreement".

So, I suppose you think those who assemble systems using ICs are
appliance operators too. Network systems are the next level of
abstraction. Nodes and software are the resistors and capacitors
of network building.

|> have enough extra voltage to handle the memory effect. This could just be
|> a myth, but I doubt it.

Memory effect is important for pocket-constructed NiCd's, and only
occurs after repeated, _identical_ discharges. Consumer NiCd's are
sintered-cell construction, which does not suffer memory effect, and
repeated identical discharges are a truly rare phenomenon in ordinary
consumer and industrial equipment.
Memory effect originally became known from satellites which used
pocket-cell NiCd's and sophisticated power-monitoring equipment which
repeatedly discharged and recharged the batteries to and from the same
depth. Conditions change, you want to use the batteries a little longer
than usual, and BOOM, memory effect rears its ugly head.

Because then they get to charge their own custom, proprietary price for it. If it becomes a standard part the price drops due to competition and the part becomes a commodity.
I have been involved in exactly this discussion on a past design, and won the "use a standard 9 volt" argument only because management had sufficient concern for the customer to give up the juicy profits available from a proprietary battery.

I drive a Ford Exploer (1992 model) and have had problems only with high
power VHF, it will on occassions make the rear wiper do a sinngle sweep of
the window. I have also noticed that the cruise control drops out when
transmitting in high power VHF or UHF but comes back in when you stop
transmitting. The rig I use is a Alinco 599 VHF power 45, UHF power 40.
Other than that I have had no problems, will be using a TEN-TEC scout in the
car shortly, just waiting for mobile bracket.

2361. Who Wrote Scratchi?

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-16 19:38:52 UTC
From: donrm@sr.hp.com
Message-ID: <CDGp8t.8z4@srgenprp.sr.hp.com>
Source record: 276187

Does anyone know who wrote the "SCRATCHI" column in the old CQ magazine? (This was back in the days when Wayne Green was editor).

Is there even anyone out there old enough to even remember Scratchi?

For the uninitiated, Hashafisti Scratchi was a fictitious character that was always coming up with weird solutions to ham radio problems - such as the time Scratchi found that the white dividing line on roads was slightly conductive, so described a way of feeding it on 75 meter mobile, with highly variable results.

I always thought Wayne himself wrote it, but others disagree. Anyone out there know?

Don Montgomery, K6LTS

--- SOLAR TERRESTRIAL FORECAST AND REVIEW ---
September 17 to September 26, 1993

Report Released by Solar Terrestrial Dispatch
P.O. Box 357, Stirling, Alberta, Canada
T0K 2E0
Accessible BBS System: (403) 756-3008

---------

*!*!*!*!*!*!* NOTE *!*!*!*!*!*!*

Version 2.00a of our Professional Dynamic Auroral Oval Simulator is now
available. Completely rewritten, this software now produces numerous
types of map projections centered on any geographical location, including
OBLIQUE AZIMUTHAL EQUIDISTANT maps where radio signal paths are projected
as straight lines. Precise DMSP Satellite Observations of Auroral
Activity characteristics are also plottable for any hour of any day from
December 1983 to 1992, making this the most extensive and contiguous
database of auroral activity observations presently available. Valuable
for radio communicators, aurora photographers, and astronomers. The
software is now Windows 3.x compatible and will operate under either Mouse
or Keyboard control. Many additional features are also included. Contact
Oler@Rho.Uleth.CA, or COler@Solar.Stanford.Edu for more information or
call our computer BBS at (403) 756-3008. A recorded message containing
additional information is also available at: (403) 756-2386.

CONFIDENCE LEVEL: 70%
NOTES:
Predicted geomagnetic activity is based heavily on recurrent
phenomena. Transient energetic solar events cannot be predicted reliably over
periods in excess of several days. Hence, there may be some deviations from
the predictions due to the unpredictable transient solar component.

------------------------------------------------------------
Chart Start Date: Day #199
```

NOTES:
This graph is determined by plotting the greater of either the planetary A-index or the Boulder A-index. Graph lines are labelled according to the severity of the activity which occurred on each day. The left-hand column represents the associated A-Index for that day.
Q = Quiet, U = Unsettled, A = Active, M = Minor Storm,
J = Major Storm, and S = Severe Storm.

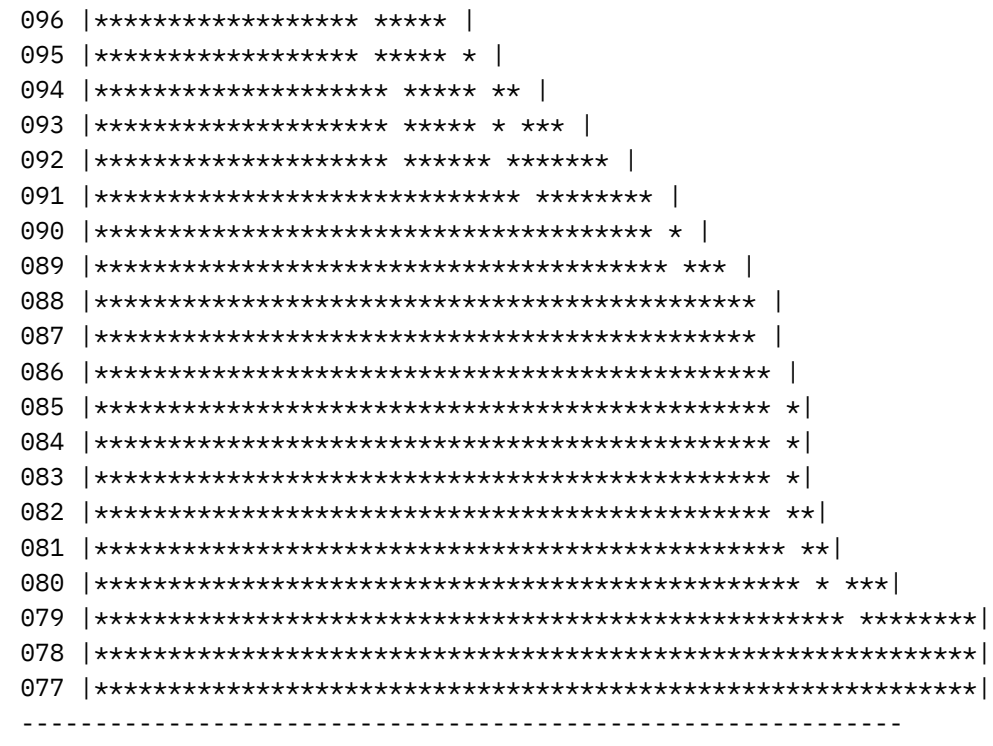
097 |************* *** **** |
```



GRAPHICAL ANALYSIS OF 90-DAY AVERAGE SOLAR FLUX

NOTES:
The 10.7 cm solar radio flux is plotted from data reported
by the Penticton Radio Observatory (formerly the ARO from
Ottawa). High solar flux levels denote higher levels of

activity and a greater number of sunspot groups on the Sun.
The 90-day mean solar flux graph is charted from the 90-day
mean of the 10.7 cm solar radio flux.

CUMULATIVE GRAPHICAL CHART OF SUNSPOT NUMBERS

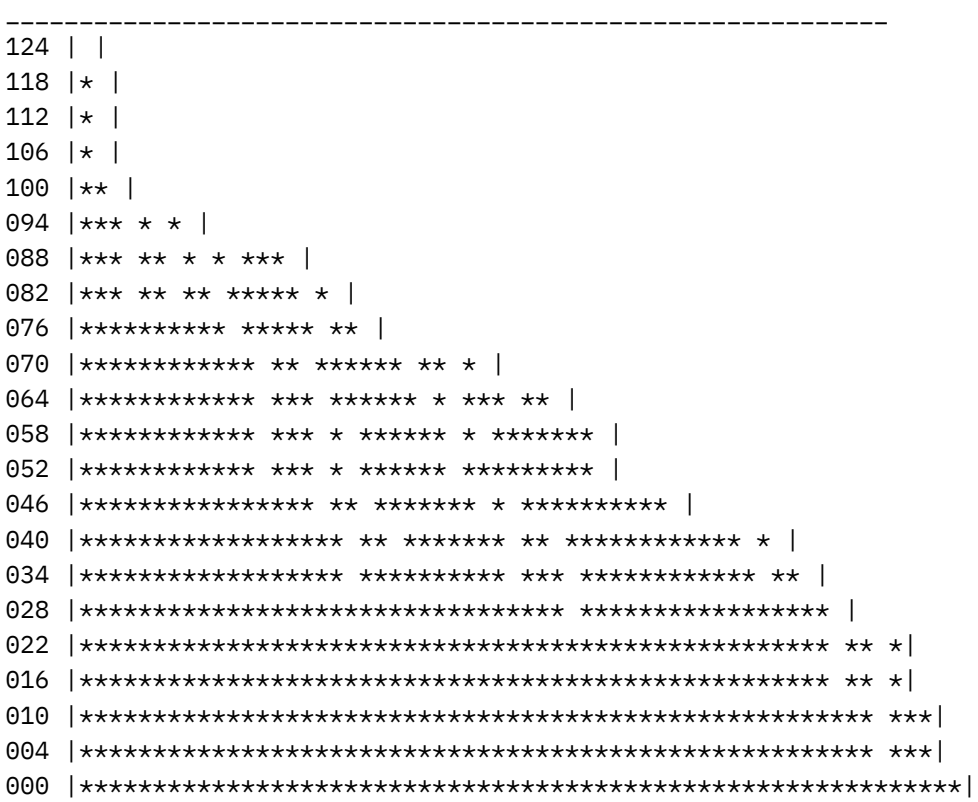


Chart Start: Day #199

NOTES:
The graphical chart of sunspot numbers is created from the
daily sunspot number counts as reported by the SESC.

: Any information that you may have would be greatly appreciated.

Ahh, yes... I was one of two or three operators of W8YX from
'67 to '73. It was a Drake TR3. My buddy Mike Valentine tells
me y'all have re-captured the shack on top of Swift Hall, complete
with the Collins AM station.

See if you can track down Carl Osterbrock, I assume he's still
teaching or deaning at UC. His dad was instrumental in the club
from the 30's through the 50's. If you do find Carl, tell him
I'm doing quite well in engineering in spite of his controls course...

THE WAY THOSE OLD HAND HELD ARE MADE IT IS ALMOST IMPOSSIBLE TO FREQ GO DOWN
THAT FAR.
THIS REQUIRE MAJOR MODIFICATION (IE. CHANGE OF CRYSTAL IN PLL MIX STAGE , SOME CAPACITOR
MAYBE
EVEN SOME COILS)
YOU CAN MAKE THEM GO AROUND 141 MHZ - 155 MHZ FAIRLY EASY. SENSITIVITY IS
NOT GOOD AFTER 149 MHZ AND UP.

REAL OR TRUE FM PROBABLY MEANT BY THAT THOSE RADIO DO DIRECT FM INTO VCO, NOW DAYS THEY MAKE SO VCO OSSCILATE AT SAME FREQUENCY AS IT TRANSMIT (MEAN THEREIS NO DOUBLING OR MIXING TO GET FINAL FREQUENCY) THEY JUST USE VARICAP TO DO FM MODULATION, WHICH ALL OF THE OTHER NEW RADIO DOSE (ICOM, ALINCO, AZDEN, KENWOOD, YAESU). SO IT IS NOT PATICULALY UNIQUE TO RADIO SHACK RADIO ONLY.

I had the same hard-sell experience. I was highly amused when, a month
after I bought the HTX, I got a letter in the mail from RS saying that
they would give me "One last chance to purchase the service plan." :-)

2372. pactor/amtor question

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-16 21:46:39 UTC
From: k9un@cbnewse.cb.att.com
Message-ID: <CDGv5t.724@cbnewse.cb.att.com>
Source record: 276208

Just want to verify what I am hearing on amtor/pactor modes. Have heard some transmissions which appear to be arq mode (bursty) and only send call sign (or selcal) over and over again. It this the station's attempt to make connection to the station indicated? Or is this a new way to send CQ (announce presence on frequency)? I assume its the former although I thought that info would not be in the human readable part of the "packet".

2373. QUESTION: NiCad Batt. Packs

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-16 22:18:38 UTC
From: tremolo@kaiwan.com
Message-ID: <CDGwn2.92o@kaiwan.com>
Source record: 276199

On the INITIAL charging of a NiCad pack (for an HT), is it necessary to charge pack to its maximum capacity (lets say 15 hour charge time, with slow charger) or can I stop after a few hours (4-5) and use it without damaging the NiCad pack? I wasn't sure about NiCad memory.. This is for a Yaesu FNB-25. For use on a Yaesu FT-530.

Replies by MAIL are *very* welcome!

2374. Info needed PRC6 and PRC6/6

Does anyone in the U.S of A know if the PRC6/6 (circa 1965) known as the
"Banana" 50Mhz FM tube walkie talkie was used by the Army? I am looking for an
English language manual. The PRC6/6 is a six channel version of the PRC6
It was made in Europe by SEL. If someone can help with a service manual
I would reimburse the cost of copy and mailing. I have a PRC6 single channel
manual but the machines are very different. 73 Robin. PA3ACQ/G3LBA

>out there know?

From what I remember about CQ circa 1955 Wayne wasn't the editor; he wrote
a RTTY column for CQ back then. But I would have to go digging in the depths
of my attic to find some of those old CQs to verify that. Wayne also wrote
the advertising booklet for the Karlson loudspeaker in those days.

I remember a lot of debate about whether the Scratchi column was evil
poking fun at the Japanese-Americans (and this was 40 years before
"politically correct" became such an issue), or whether it was inoffensive
dialect humor. I guess the same could be argued about the "Heinrich
Schnibble" pieces in the old Saturday Evening Pest.

Hi, it's me again,

From my original post, I received several private replies. Most cited
positive experience with RS repairs of accidental damage to a variety
of equipment. I think that there was one negative response.

The consensus was to the effect that it is up to the store manager,
and RS are usually eager to please.

Just wanted to let everybody know that RS isn't _all_ bad :-)

I've got a little problem with your assertion that NiCd's should be
stored discharged. If you store a NiCd charged, the little crystal
"dendrites" that naturally form internally get blown to bits as soon
as they form. If you don't keep the battery charged, these little
dendrites will continue to form--shorting the battery and killing it.

Am I misunderstanding what you have said or do we actually have a
disagreement?

Cheers,
David

As long as you charge no faster than the 15hr rate i.e. Capacity in AH/10, you can safely charge cells in series, and leave them on charge for extended periods without risk of overcharge. This is the simplest and least expensive method. There are other very clever ways, like delta chargers, which detect the little voltage peak which occurs when a cell reaches full charge. These chargers usually use a uprocessor based design to do the detection and control. Works well, but is not cheap or simple.

>compared to an IIR filter. And processing power.
>
>--
>Bill Coleman, AA4LR ! CIS: 76067,2327 AppleLink: D1958

As mentioned in my previous post, perhaps "ring" is a poor choice of words,
for which I have no other way to describe it... FIRs will not oscillate,
of course, but think for the moment of an FIR filter (ie raised-cosine),
with equalizer weights of -1/2, +1, and -1/2 (summed analog domain) and
one applies a step function into the filter, band limit to the first
significant frequency band of the FIR filter, one can obtain the following
response with the defined FIR taps (example chosen for simpilicity):
(ya, this is a bandpass filter)

```
** (+1x)

* *

* *

* *
******************* ***************
* * * *
* * (-1/2x)

| | | | |
-2t -t t(0) +t +2t
```

This isn't technically "ringing" but that's sure how my ear would
interpret it....

A pure sine wave at the "tap delay" rate, will have minimal overshoot,
But step functions (with similar results for impulses) will produce
what looks like "ringing".

FYI Linear phase is implied by the response's time symmetry! Non-linear phase, aka: NON-constant group delay produce assymetrical time domain signaling for a step or impulse response.
Note: if the sum of the
area under the curve = 0 for then also implies a zero at dc.

Ah, imperfect life..... I leave it to the student to prove.....

>should set up my antennas. Anyone know?

Your largest potential problem is picking up interference from
corona. There's not a lot you can do about that except keep
pestering the power company to fix it. Setting up your wire
antennas at right angles to the power lines will help a tiny
bit, but if that doesn't favor the direction in which you
want to work, then it's not worth it. If the power lines
are *really* close, you might be able to use them as a reflector
in a directional array, but I'd be more concerned about electrical
safety issues and locate my antennas as far from the lines as
practical.

The problem with the "store and forward" (simplex) repeaters is that they're difficult and time-consuming to use. Given the small area of operation, and your desire to stay clear of established machines, I have a suggestion: Why not have one person as the designated "net control." He (or she) would be at a central base station, and could receive reports and give instructions to the patrol units (on handhelds). In order to increase privacy from eavesdroppers, you could conduct your activities of split frequencies, where the portables transmit on one, and the base on the other.

Just as a bizarre data point: yesterday I took my HT-220 Nami-talkie out of its charger and made a call on one of the local repeaters - and it worked first time.

What's surprising about this? Well, I think that's the first time that radio has been out of the charger in a few years. In fact, I opened the battery compartment and looked at the battery - it's the original Motorola NiCad, with a manufacture date of 1974. I've had it since it was new, and it's been on trickle charge most of the last 20 years.

Of course, I don't know how much of the original capacity of the battery is left, nor how much longer it's going to keep working. But it had enough snot left to have a brief chat on the repeater with no signs of failure.

BTW, this is the standard charger for the radio - the kind that puts lots of volts are very little current on the battery when it's in trickle mode - something chargers don't do any more. I expect modern batteries don't want that kind of treatment.

I'm utterly amazed! NiCads aren't supposed to last for two decades.

Zowie! I wonder if Motorola has a battery museum?

What I *love* to do at Radio Shack, Sears or Best buy is let them extol the sturdiness of their product and then when they start trying to sell the extended warantee, I ask them "Gee, which is it? First you tell me how reliable it is, and then you tell me it's gonna break so I should buy this extended warantee. If it's that unreliable maybe I should look elsewhere...".

They usually get all flustered and then back down on the hard sell on the warantee...

You don't want to discharge a *battery*, a group of cells, down to zero because of the danger that the weakest cell will reverse and be damaged. But individual cells can be safely discharged to zero since there's no other source of current connected that can reverse them.

2393. NiCad kudos and advise

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-17 13:40:42 UTC
From: kstuart@oasys.dt.navy.mil
Message-ID: <43728@oasys.dt.navy.mil>
Source record: 276134

I've been following the thread on NiCads, and want to pass congratulations to Greg Thoman on his accurate and thorough replies. Saved me a lot of typing...

However, I would like to pass along a warning which, so far, seems to have been overlooked. In fact, perhaps many instances of killed NiCad packs can be traced to this particular practice -

My IC2-GAT has the typical low-battery warning light which kicks on to indicate that I'm running out of battery. Of course, this is common to the general breed of H/T's that we all use. On the ICOM, this indicator does not light when a fully charged pack is attached and the rig placed into operation, NO MATTER WHAT THE VOLTAGE OF THE PACK HAPPENS TO BE (voltage rating, that is). This indicator only gives a warning when the H/T has insufficient voltage (or is approaching insufficient voltage) for continuing operation.

Therefore, the low battery warning is activated when several of the cells in the pack are already in the reversed state!!!

This means that if I wait for the "low battery" indicator to flash, I am already reducing the life of my battery!

My practice is to never permit the battery to discharge to anywhere near this level, but to swap batteries before this happens. For instance, on an all day event, where I know that my battery will give about 5 hours of operation, I will change to a fresh pack after about 4 hours. This will prevent cell reversal if the cells in the pack are reasonably equal in capacity. After the event, all packs are fully recharged at the conventional C/10 rate.

Remember, the "low battery" warning in H/T's is not engineered to tell you when the first cell (weakest) in the pack has fully discharged!

Well your disagreement isn't with me, it's with the PowerSonic technical reference manual. They recomend that you store Nicads discharged. They ship them that way.

|>
|> Or am I thinking of lead acid cells?
|>

You're thinking of a battery of series-connected cells, in
which draining the battery to zero will inevitable reverse charge
(and thus damage) some of the cells.
An individual cell can be discharged to approximately zero
without damage but should be recharged _immediately_. Note the
use of "approximately" above, though.

I second the disagreement. NiCds should be fully charged before
storage and should not be stored discharged.

|> Silly me, but what is a "XX hr rate"? Say, a 600 mAh cell is charged at 60 mA,
|> then what is he "rate"? What if the current is 100 mA?
|>

```
The xx hour "rate" is the charging current which will recharge
the battery in xx hours. You'll run into two uses of this, since the
amount of energy required to recharge the battery is considerably
larger than the nominal amp-hour capacity.
In one case, you divide the battery's capacity by xx hours to
get a charging current and call that the "xx hour rate"... but you then
have to charge for _more_ than xx hours to fully recharge the battery.
For instance, a 500 mAh NiCd has a ten-hour charge rate of 0.500 / 10 =
50 mA, but a full recharge takes 14 hours. This is the version I
usually see people use.
The other point of view would be to use the actual recharge time,
but I don't recall ever seeing that used in print.

I recently found (during a very hot spell) that sleeping with a fan on
in the room let me sleep much more soundly, as it effectively blocked
any noises coming in through the window. (birds, train noise, etc.)

I am now looking for a simple circuit which will generate a white
noise signal, suitable for the AUX input of a spare amplifier I own.

Does anyone have a _proven_ circuit they would care to share?

Thanks --

VK2SG RTTY DX Notes, 17 September
VK2SG RTTY DX Notes for week ending 17 September 1993 (BID RTDX0917)

Two big RTTY weekends are upon us. Mellish Reef is due up this
weekend, and next weekend is "the Really Big" RTTY contest. Pray for
good propagation. See Notes below.

Our information this week came from 9X5LJ, CE3GDN, DJ3IW and the
Central Europe DX-Cluster Node DB0SPC, I5FLN, I5ICY, IK1HSR, KE6XJ,
WB2CJL, ZS5S, the NJ0M Node of the Twin Cities DX Packet Cluster
Network, and QRZ DX. Thanks to all for your assistance.

Notes of Interest:

This Sunday, the 19th, should see the start of the 10 day Mellish Reef Expedition, VK9??. Look for them to be operating split on 14080 or 21080 KHz. QSL to VK4CRR with a SAE and return postage.

Next weekend brings the year's most popular RTTY contest. The CQ/RTTY Journal WW RTTY Contest runs from 0000Z 25 Sept-2400Z 26 Sept. For details see the RTTY Journal, July/August P.6, CQ Sept P.120, or QST Sept P.115.

Some special RTTY contest operations: Look for 3D2VY, in Fiji, by a group of Japanese operators. QSL to JR2KDN. Also expect some heavy activity from West Kiribati by T30RA, Bob KN6J; T30RS, Bob N6OXR; and T30GV, Glenn W6OTC. QSL to their home CBA. A multioperator effort, led by Jack, WA7LNW, is planned from PJ8X in Sint Maarten. QSL to KE7LZ. Pete, K8UNP/C6A will be active from the Bahamas in the contest, and afterwards until 1 October. QSL to his home CBA.

East Kiribati, T32 - From 27 September to 4 October, KN6J and N6OXR will be active as T32RA and T32RS respectively. QSL to home CBA.

Mount Athos, SV/A - Nikos, SV2WT, advised Luciano, I5FLN, that Apollo, SV2ASP/A, is again QRT from RTTY due to laptop screen problems.

Send your Bandpass and Notes of Interest for next week's bulletin to Luciano, I5FLN @ ZS5S.ZAF.AF, or I5FLN @ 9X5LJ.#KGL.RWA.AF.

>Marc Christensen

I think you called it right, Marc. And when they do miss that 'next letter', then get upset and that might cause them to miss the next one also, especially if it's at a test session.

I write 'dah' and 'dit' if I ever have to write CW for some reason. And in those cases where I see dots and dashes on bumper stickers, billboards, or whatever, I have to sound it out before I can understand what it says.

I routinely copy code at around 40 wpm.

And (oh, no, he's about to change the subject) I'm not one of the "CW vs. no CW" crusaders. I compare CW to knowing and using Spanish. I learned both 'languages' in Jr. High school, and use either or both whenever I feel like it, providing, of course, that there is someone around with whom to converse.

I suppose I'd be equally as mad if someone forced me to use CW, as I would if they took away my means or privilege to do so. But I suppose that is flame-war material, and I probably shouldn't have brought it up.

Yes, I have a _proven_ circuit.

An easy way to realize white noise
==================================

There is a very easy way to realize a white-noise-circuit.
Take a bipolar npn-transistor and a resistor. That's all.
The trick is, you must need the inverse basis-emitter-
breakdownvoltage (about 7V) as following circuit shows:

```
|----------------------------------------o +15V
|
R1 = 470 k-Ohm
|
|------------------> U-noise = 5 - 20 mV
|
e \| To amplify U-noise take a highimpedance-opamp,
b |---- BC107 like a bi-fet-type is, as example LF356, TL071.
c /| |
|
|
|---------------------------------o GND
```

With other transistor-type it can be you must change the resistor
R1 between about 100k-Ohm and 1M-Ohm for best results.

So I hope I can help you. If you have more questions write to my
mailbox please

Thomas

I am a relatively new ham (5 months) and this discussion has been very interesting but there seems to be something that is left out. I have been associated with the local ARES group for the entire 5 months and feel that much of it has been very helpful to me. However, I distinctly remember one of the main justifications of the amateur radio service is to provide public service and promote international good will. As I read through this discussion it appears to me that consumer electronics have basically made the amateur radio service irrelevant (no way they can provide public service) and we are in danger of losing our spectrum if there is no better justification for it than to let a bunch of old men fiddle with 50's technology. I personally like the radio because it is a hobby (I flatly refuse to buy a cellular phone for the simple reason that it is bidirectional and I get charged for it everytime I look at it). But it is real hard to justify the allocation of a fairly large chunk of spectrum to let me fiddle around with a toy a few times a week if that fiddling doesn't have the possibility of providing some public service.

So, my real question is, if we aren't going to figure out a way to really provide either emergency communications or other public service, how are we going to justify our spectrum allocation? This is not just a rhetorical question - I feel it is an important consideration with respect to the future of amateur radio.

PAIA Electronics sells a Surf Synthesizer kit
which is a white noise generator. They have
an ad every month in Popular Electronics magazine.
Or you can call Directory Assistance in Edmond,
Oklahoma to determine their phone number. PAIA
first started selling this kit in 1969. It is
so venerable (read: proven) that it uses an
all-discrete design; transistors, not chips.

However, I find that a much more general-purpose
solution is to use my already existing Compact
Disc player with my already existing speakers
and/or headphones, to play a CD full of ocean
sounds, on infinite repeat. The local Tower
Records sells six different recordings of the
ocean. I bought "A Week in Hawaii: Tropical Surf"
on Rykodisc. Very soothing.

Scratchi was written by a ham in the Virgin Islands named Dick Spence
(KV4LIV?) I am not sure of his call, but I think he was the DX editor of CQ
at the time (around 1956/7). Dig up an old copy of CQ from the 50s' to
verify the call. Scratchi's well known fist can still be heard during the
CQ WWDX CW Contest. He moves around a lot and changes calls, but the fist
is unmistakeably Scratchi :*).....

-=Joel=-
KC1SG

******** Explain "fist" to the No-Code kiddies out there in radioland********

This is rule one, two and three of NiCds.

Note that the temp rise CAUSES the voltage drop **on charge**.
See below...

> Charging cells in series can cause problems because some cells
> will reach full charge (and beyond!) before the others. Again,

>

No, charge and dischrge each CELL on it own, on as a battery.
Matched sets only postpone the day of reconing.

> Someone please correct me if I have any of the above wrong.

Pretty right on, but a matched set is NOT a cure all. BTW, oyu need to
match for voltage, capacity, charge efficency and series resistance.

>
> At any rate, it seems to me that the ideal nicad battery charger would operate
> as follows:
>
> 1) all cells charged individually, rather than in series.

Yes.

>
> 3) Charge: charge the battery at a fixed current until the
> voltage climbs to some threshold.
>
> 4) Maintain: hold the cell at a specific "full charge" voltage.

NO!!

You need a pulsed current. VERY high charge current, high discharge, open
circuit. You measure the voltage in each phase, and use the divergance of
the derivatives to signal end of charge. you can charge a NiCd in 5-10
minutes this way, and get better life from the cell!!

> As you've probably guessed by now, I'm planning to design and build my

>

Since you are at Sun, see if you can track down a mob called "Intergrated
Circuit Systems". They make a DSP chip that is programed for just this
job. ;-0 and tell me where I can get them ;-)

For details, look in the Journal of the SMPTE of about the very late 70's
to early 80s for articles on Christie 'reflex' pulse chargers.

So does it need recharging the cells every month as for lead-acid cells? If you wouldn't, NiCad Cells discharge themselves within 100 days, from that on being stored discharged.

I am not a battery expert, just asking.

Too true...

One other 'detail'. Cd has an evil habit of forming 'dendrites' in cells. These will grow through the seperator, and short the cell, so DON'T use nice clean filtered DC to charge them. Use offset AC, same as the electro-platers do to get a smooth hard plating. The reversal of current will remove any dendrite in short order.

Only use batteries in sealed packs if you like throwing them away. It only takes a few small holes in the case and you can get at each cell.

Also the prices for the packs is out-ragous. $2.45 ea for Saft Cs, vs $85 for 5 in a pack. pass.

I just found the best set of articles on NiCds I know of, so here is
the reference.

Rod Cooper, Wireless World, May, june & july 1985. Plus also September
from memory?? but not sure. Also include a reasonable good charger,
and construccction details.

~Paul

PS, If some one has a copy of my post from back when feel free to re-post.
I need a copy my-self. :-)

SB NEWS @ AMSAT $SPC0920
* SpaceNews 20-Sep-93 *

BID: $SPC0920

=========
SpaceNews
=========

MONDAY SEPTEMBER 20, 1993

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited distribution.

* MARS OBSERVER NOTES *
======================
The last known commands known to be received by Mars Observer was on August 20 when the orbit insertion sequence was uplinked. On August 21 at about 6PM, no signal was received from the spacecraft after the tanks were pressurized. The spacecraft has not been heard from since.

Prior to pressurizing the fuel tanks for orbit insertion, the transmitter was turned off to protect the filament in the transmitter. This is a common practice for any high-shock event and was recommended by Martin Marietta. The transmitter has been turned off and on in four previous occasions for the three trajectory correction maneuvers and deployment of the High Gain Antenna.

The odds of the fuel tank exploding is under 0.1% (or under 1 in a 1000). The pressurization sequence is started by activating the helium via dual pyro valves to pressurize the tanks to 264 psia. The nitrogen tetroxide (N2O4) is pressurized first, clearing the helium lines of the oxidizer. The monomethyl hydrazine tank is then pressurized. Dual series pressure regulators prevent overpressurization and dual check valves prevent the hypergolic propellants from mixing through the pressurization tubing.

Attempts were made to view to thruster firing of Mars Observer with two infrared telescopes in Hawaii, but the attempts were thwarted by cloud cover. The Hubble Space Telescope was also considered, but it was on the wrong side of the Earth and would have had to point closer to the Sun than was desired.

If Mars Observer did not execute its orbit insertion burn on August 24, it would have flown by Mars but remained in an elliptical orbit around the Sun between the Earth and Mars. Opportunities to enter Mars orbit may occur 10 months to 2 year from now, provided the

spacecraft can be recovered.

The possibility exists that the Mars Observer may have entered orbit around Mars on its own.

If Mars Observer was not maintaining proper attitude and the solar arrays were not pointed at the Sun, the spacecraft would last about 7 days before running out of electrical power.

If Mars Observer is lost, then the Russian Mars '94 mission would lose about half of its science data, since Mars Observer was to act as a communications relay for the Mars '94 mission. Also, the Mars '96 mission may have to be redesigned.

If Mars Observer is not recovered, it will be the first post-launch failure of a NASA planetary spacecraft since Surveyor 7 in 1967, a period spanning 26 years.

[Info via Ron Baalke at JPL]

* FO-20 SCHEDULE *
==========
The following is the latest FO-20 mode JA transponder schedule from the JARL:

22-Sep-93 08:30 through 24-Sep-93 09:05 UTC
29-Sep-93 08:50 through 30-Sep-93 09:11 UTC

[Info via 73 Richard, G3RWL]

* VATICAN ACTIVE ON AO-13 *
==========
Pino (I0DUD), Antonio (I0JX) and Eric (WB6GYD) will be conducting AO-13 Mode B operations from the Vatican on Saturday, September 25 starting approximately 0500Z and again on Sunday, September 26 (They are unsure of the operating time on Sunday). The call sign will be announced at that time and a QSL route will be established. This operation was previously announced in an Oscar Satellite Report. In addition, they plan to spend Friday night (probably 2000-0500Z 9/24-25) at the Vatican and operate 20/30/40 meters, so look for them there.

[Info via Eric Archer, WB6GYD]

* AMSAT-SA NEWS *
==========
Hans van de Groenendaal, ZS6AKV, was re-elected as the President of SA AMSAT at the society's Annual general meeting held in Johannesburg on September 11.

The AGM was held after the 14th annual Space Communications Conference - SPACECON 93.

The conference was attended by 60 delegates and featured a major update on SUNSAT, the University of Stellenbosch Satellite. Other papers covered Digital Signal Processing, How to solve intermod interference on 2m Satellite Downlinks, Using 29MHz satellite signals to study propagation, Phase 3D

Update, and many others.

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and 10 weeks after the test session. The FCC considers their processing time to be 90 days--from the date they receive the application. The FCC usually receives the application one to two weeks after the test session (once the VE Team and the coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a Morse code test) will not receive a new license from the FCC. The existing Technician license plus the CSCE conveying the Morse code test credit is the only documentation issued for use of the additional HF privileges.

****

The following test session information is provided by the ARRL/VEC for the upcoming six to eight week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "bjahnke@arrl.org" or via MCI Mail to MCI ID: 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1993 Test Fee is $5.60.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and 10 weeks after the test session. The FCC considers their processing time to be 90 days--from the date they receive the application. The FCC usually receives the application one to two weeks after the test session (once the VE Team and the coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a Morse code test) will not receive a new license from the FCC. The existing Technician license plus the CSCE conveying the Morse code test credit is the only documentation issued for use of the additional HF privileges.

****

The following test session information is provided by the ARRL/VEC for the upcoming six to eight week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "bjahnke@arrl.org" or via MCI Mail to MCI ID: 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1993 Test Fee is $5.60.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC, 227 Bennett Ln, Charlotte, NC 28213;
704-596-2168

D = Great Lakes ARC VEC Inc., PO Box 273, Glenview, IL 60025;
708-486-8019

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368; No phone

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, 301-317-7819, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;
414-774-6999. Test fee for 1993 is $5.00.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068; 816-781-7313

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 91943-2446; 619-465-3926

S = Sunnyvale VEC ARC, PO Box 60307, Sunnyvale, CA 94088-0307;
408-255-9000

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27265;
919-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2500; 615-688-7771.
The 1993 Test Fee is $5.60.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
The 1993 Test Fee is $5.60.

As someome else mentioned MAXIM makes a chip, the MAX713 that is a complete Nicad charger controller on a chip ... other than a source of DC, it requires a pass transistor a couple of R's and C's. It uses dv/dt sensing to determine end of charge, and can also use temperature (you need a pait of thermistors ... one for ambient and one in the battery pack. It will charge from 1 to 16 cells, fast charge rate from C/3 to $c (!). Switches to trickle charge (with a selectable charge rate) when charge is complete. It's cheap (a few bucks, as I recall). There is an app. note and spec sheet available.

I've not yet built my super-charger, but intend to over the winter.

MAXIM can be reached at

Maxim Integrated Products
120 San Gabriel Drive
Sunnyvale, CA 94086
(408) 737-7600

Or call 1-800-998-8800 for literature, app notes, etc.

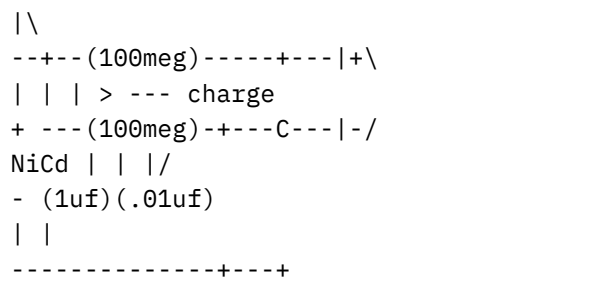
: I would bother trying to build such a charger from scratch. First because
: it would be rather expensive: you would need at least one
: microprocessor/controler with an ADC.

A uP/ADC isn't necessary. Here is a $2 analog peak detector:



Note that one RC is 100 seconds and the other is 1 second. For rising
voltage across the NiCd, in- > in+ and output = +Vcc. For falling
voltage, the reverse is true. The op-amp has FET inputs (10^12 ohms),
such as the LF412, LF358, or TL084.

If you're interested in building what I built, I can mail a schematic
(PCL format).

2416. Re: Yagi for Cellular Phone?

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-17 17:30:19 UTC
From: mikew@sad.hp.com
Message-ID: <CDIDyJ.FA4@srgenprp.sr.hp.com>
Source record: 276145

I work with an emergency communications group associated with the California Department of Forestry. Our communications bus includes in its hardware complement a cellular band yagi and a 35 foot telescoping mast on which to mount it. We have had the cooperation of the local cellular providers in this venture; they have even let us in on the locations of all their local sites (grudgingly) so that we can intelligently point the thing when we're in some forsaken canyon 60 miles west of Outer Bufu, trying to establish a communications link to civilization (i.e. to a helicopter equipped pizza delivery joint).

The antenna is a 9dB ASP-962 made by Antenna Specialists. List is in the $90 range.

Pete Rossi (rossi@VFL.Paramax.COM) wrote:
: I have a question about ni-cads....

: Why has their never been a standard developed for ni-cad battery packs?

Actually, there ARE standard cell sizes - you just haven't seen all of them yet! Find a Sanyo/GE/Panasonic catalog and be overwhelmed by the choices. :-) There's 2/3 C, AE, and a bunch of other form factors for manufacturers to choose for their application.

Put yourself in the designer's shoes. Usually, one designs the device around esthetic and usability concerns and not around the size of the battery pack.

: Imagine if every flashlight needed a different size battery. WHAT A MESS!!

Flashlights are a special case where size is not as much of an issue. If the batteries wear out, you still have a fine club.

I second the suggestion for battery packs that can be taken apart to replace cells.

>though I wish it could transmit a touch-tone sequence on each PTT (which
>would parallel the receive-DTMF squelch). But, the manual stinks.

It needs work to be sure!

>How do I put a different tone on each channel?

While setting up to program a channel (you're still in VFO mode), enter
the menu and select the entries for rcv & xmit PL and enter the appropriate
value. You can do this at anytime time before committing to memory. In
this same manner, you can alter on a per channel basis, any of the menu
parameters you desire to be different.

>Are there any other hidden gotchas or features in this thing? It feels like
>I've been given half a map to the Great Underground Empire.

Since you haven't really identified what you understand about it so far
I couldn't hazard a guess as to what you don't!

|> So does it need recharging the cells every month as for lead-acid
|> cells? If you wouldn't, NiCad Cells discharge themselves within 100
|> days, from that on being stored discharged.

The self-discharge becomes an exponential decay process after a while, and although the cells won't have a useful amount of charge in them, they'll not discharge completely anytime soon.
Based on observing the eventual death of long-stored NiCd's over the years, I suspect that an annual "exercise" (charge 'em up, discharge 'em, and charge 'em up again) would be beneficial. Amplification and correction, anyone?
On another note, a recent poster quoted a PowerSonic tech manual as recommending discharge before storage. I wonder if we could get a little context surrounding that quote. Is it based on battery longevity or is it based on safety (since accidental shorting of a NiCd can be dangerous)?

Greg Thoman: The opinions expressed herein are mine alone, and I am solely irresponsible for them.

I just bought a 2m HT from RS - hard to beat that price! I'm pretty sure, based on earlier postings on this group, that I can use one or more Icom battery packs with this set. Could someone please let me know which Icom models I can switch out the batteries on. Thanks in advance.

Gee, you folks have to PAY for that sound? I get to listen to it all night long for free on my sailboat! And I even get rocked back and forth (sometimes not so gently though...)

When I worked at the Shack in another life, I had a firm and fast policy of telling customers the identities of the real manufacturers of any product for which I knew the information. Sometimes they (and I, for that matter) were quite surprised to find out who really made things.

One useful resource for tracking down manufacturers is the back of the "Store Operating Manual". In the back is a section with what is basically a cross reference of original manufacturers' contact information, mainly intended for emergencies with chemical products, etc, but also quite complete for electronic equipment. I don't know if such a reference still exists, but 3 years ago, when I worked for the Shack, it was a godsend. It often made the difference in whether *I* would buy a given piece of hardware.

Please note the change in distribution for this thread. It's propagating into rec.photo where it really isn't appropriate. If you could delete rec.photo from other replies on this topic, it would be appreciated.

Thanks
Bob Atkins

We've had packet blasts on our repeater. We copied the ID, and went
to see
the guy. He was on another frquency, and was intermodding us.
Pretty interesting. Also, many guys swith their radio to a
repeater frequency, and forget to disconnect from their session
first. They sit there sunday nites listening to our DX net, all
the while throwing packets at us till they timeout. And they
never know it.

I don't say this to be a wise guy, but to ME, it sounds like bip and beep
======
If I SEE a . that's a bip
if I SEE a - thats a beep

However, as far as CW learning goes, once I knew the letters enough to
not need a cheat chart, it was all bip and beep, no . or - marks.

I don't know my exact speed...I've not the foggiest idea (and as I am
not looking to upgrade, only so to be able to QSO, is why I haven't timed
myself).

But...if I have to write down EACH word/letter my RPM drops fast.

If I'm out in the other room and not writing it down, I can catch calls,
and words ...but I can't store up a whole sentence in my head.
Thus, while just waiting for a call, or some one I know, I can tell who
is who, get the RST report --sometimes a name... or QTH they are in...
all at a much faster clip, than when I have to write it down letter by
letter....I can not write faster than 6-7 WPM...and type even worse!

I wonder then if that has PARTLY to do with it?

HOW in blazes do people DO 20 wpm writing it down? The copy must look awful!

You know, there's a tidy bundle to be earned by the guy who dopes
out a line of adapters from Makita and other cordless power tool batteries
to fit the various Ikensu H/Ts. True, some of the larger packs would
look strange on a tiny HT - but they are readily available and cost
less than equivalent amperehours bought in those glamourous little
snap-on black boxes.
Myself, I have an ugly big orange 8 Amperhour gel-cell that will
run my HT for days, if the need arises.

You could just tune your FM tuner to an empty (no station) spot on the dial and allow the hiss to play thru the amp to the speakers. The FM deemphasis will roll off the highs a bit. It sounds something like white noise.
You probably already have the required hardware, so this is a zero cost solution.

2435. RTTY software for Flesher 470 or Heath HD3030 TU ???

I don't believe that you cannot write faster than 6-7 wpm unless you
have some physical handicap, as that is one word every 8-10 seconds,
and little kids just learning to write can go that fast.

I can copy code in joined-up writing at 35 wpm (both copying and writing
fall apart there), and I don't think I am unusual. I do notice, though,
when I am lecturing and write stuff on the blackboard, then start to talk
about the stuff I wrote down, it can take a long time for most people to
stop writing and start listening. Maybe it's just cos they are Texans
and talk reeeeeelll sloooow laaaaahk.

The neighborhood watch is a great application of amateur radio. I don't think that it is necessary to get permission from a repeater group before using it on such an event. This is even if that repeater is the local chat box. We must remember that amateur radio is a service first and a chat box secondly or maybe evenn chatting should be as low as the third or least important levels.
I participate in a walk with my blindness organization and we don't seek permission since we don't know really whether or not we'll need the use of a repeater. Of course, I probably wouldn't break into a busy repeater but I figure anyone who wouldn't want us to do a public service event with their repeater better have a legitimate service-related reason. 73 for now.

That's interesting. I'm mildly dsylexic (is that spelled right :-).
I've NEVER been able to "hand write" - printing is the best I can do.
Passed my 13 wpm with printing back in 1972. Interestingly enough I can
type pretty reasonable speed (I tell people I can type 300 wpm, but have
to backspace 275 of that :-)

There are at least 2 board layouts out there.
Note that while the jumper pad numbers have not changed, the board positions of the pads have.

YAESU FT-530

Expanded Receive 110-180, 300-500 MHz
Expanded Transmit 130-180, 400-470 MHz

o Keep that magnifying glass handy! 8-)
o Be aware that your repeater memories, ect. will be erased. :-(
o Remove Antenna and Battery.
o Remove four screws on bottom holding battery track.
o Remove the four (black) screws holding rear case.
o Slowly... open the front cover from tranceiver and lay both halves on table.
o Note positioning of white paper insulator in right half of radio and lift out
(don't throw away)

o Carefully locate Jumper Pad 13 and remove solder.

---
o NOTE: If you wish to restrict transmit to the ham band,
Carefully locate Jumper Pad 15 and remove solder.
Otherwise, leave pad 15 in place.
---

o Re-install white paper insulator, make sure ground tab slides through the paper insulator.
o Close radio back up (Careful not to pinch the ribbon cable near lithium battery when closing halves).
o Re-install the four (black) screws holding rear case.
o Re-install the four (small silver) screws on bottom holding battery track to radio body.
o Attach Antenna and Battery.

o Turn off Radio.... Press and hold both arrow keys while turning on the Radio.
o Modification Complete.

I found out something interesting the other day. I had to get an
important letter out that morning and found out my laser printer
had died. So I decided to write the letter longhand. I couldn't
do it. I know what the letters are supposed to look like, but I
couldn't make my hand do them. I could still block print, but not
write cursive. So I pulled out the tools and fixed the laser printer.
I guess I should practice writing longhand again for the day I
can't immediately fix the printer. 1/2 :-)

As an owner of repeaters (ie, part owner of Northlink), I strongly
disagree. ANYTIME you plan to regularly use a repeater for a net,
you should ask permission of the owner.

If a block watch group showed up on Northlink regularly, we would ask
them to leave (or system is statewide). If a block watch group shows up
on ANY repeater, they are likely to be asked to leave. The repeater wasn't
set up for block watch. If you ask the owner AHEAD of time, he might
agree, if it isn't incompatible with the intended use of the repeater.

And before you flame me about the public service aspect of ham radio,
let me remind you that there are MANY different aspects of ham radio,
and some repeaters may exist for a very specific function (such as
DX spotting). Furthermore, other public service/safety functions that
you don't even know about may be going on. For example, one Northlink
repeater was put in specifically at the request of the National Weather
Service for skywarn. If we have a big storm going, we don't want a bunch
of neighborhood watchers on their reporting that everything is normal!

A repeater belongs to someone. If you want to use it for YOUR group,
on a regular bases, ASK. It's only common courtesy.

2451. RS HTX202 warning

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-18 21:47:36 UTC
From: ritterbus001@wcsub.ctstateu.edu
Message-ID: <1993Sep18.164736.1@wcsub.ctstateu.edu>
Source record: 276177

A friend in my daughter's club warned that the plastic loop on the side
of the HTX202 where you fasten the wrist-stap ring had broken off of
his, causing the HT to fall. Fortunately, he was on a carpeted floor,
so no further damage resulted.

He suggested attaching the wrist strap through one of the holes in
the belt clip, which I promptly did. It's a trivial problem, but
I wouldn't want it to happen on a concrete floor :-(

Good Lord! Here we are on the NiCd memory myth (and all the junk that goes with it) AGAIN?

Unfortunately, I've lost the last lengthy posting I made on this subject (if anyone has a copy and is willing to e-mail and/or re-post it, I would be muchly appreciative!), but here's the short version, directed specifically at two items which came up in this thread:

1. No, there is no memory effect. A slightly longer and more accurate answer is that there IS one, but it is only observed under some VERY specific and rare conditions (the satellite example given earlier is the only documented instance I know), and essentially does not occur in consumer applications. What usually gets blamed on "memory" is damage or voltage depression through over-charging (if not voltage depression, damage from exceeding recommended temp. limits through excessive charge current and/or time).

2. Charging at the 0.1C rate is generally NOT considered acceptable for "trickle" charging (meaning something you can let go "forever.") The limits on trickle charge current vary from manufacturer to manufacturer and with the physical design of the cell (for one thing, by how well the cell dumps excess heat), but are generally around 0.02C to 0.05C. Note that these are the MAXIMUM currents for trickle-charging, not the recommended levels. You can quite often GET AWAY WITH leaving a NiCd battery on an 0.1C charger "forever" - meaning the thing won't rupture - but don't come complaining to me about "memory" problems later!

2454. Need MICOR and MITREK information

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-19 01:15:42 UTC
From: bruce@pixar.com
Message-ID: <1993Sep19.011542.18047@pixar.com>
Source record: 276086

I picked up a Motorola VHF MICOR and a UHF MITREK at the Sonoma flea.
I have the MICOR manual, but lack one for the MITREK. I have a lot
of questions.

Obviously, I'd like to re-crystal the frequency units for these radios.
Can anyone share their experience with this? What do I need to specify
when ordering the crystals?

I have the information on modifying a VHF MICOR to be a repeater. Someone
recently posted information on how to modify the MICOR for use as a 9600-baud
packet radio (by using a thermistor temperature-compensation input to frequency
modulate the radio), and I missed saving that file because I didn't know I
would become a MICOR owner days afterward! It's gone from my news spooler.
Someone please mail me that file.

Are there similar mods for the MITREK? The MITREK doesn't look quite as
over-engineered as a MICOR.

Thanks

Bruce Perens KD6OTD/AE

2455. Question about ni-cads (was Re: need expert info on nicads.)

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-19 01:26:53 UTC
From: William=E.=Newkirk%Pubs%GenAv.Mlb@ns14.cca.CR.rockwell.COM
Message-ID: <9309190145.AA27258@ucsd.edu>
Source record: 276082

>I can't figure out why every manufacturer needs to use his own custom,
>proprietary, ni-cad battery pack. Years ago they settled on a set of
>standard sizes (D, C, AA, AAA, and 9 volt, etc) for regular batteries.
>Why can't they do the same thing for ni-cad battery packs???

two things i can think of:

brand loyality

(can't use sony parts on a panasonic)

guaranteed spare parts sales/forced upgrades..

(well, ok, it's THREE reasons..and no one expected the Spanish Inquistion
either).

the last reason is the one that hams should really beat up the equipment
suppliers on. all a Yaesu or Kenwood has to do is to declare a battery pack
"obsolete" and presto - you have a perfectly good radio that can't be repaired
(well not with factory parts...)

Yaesu almost has it right with the alkaline cell holders except there needs to
be a nicad cell holder (for that 1 more battery to get the equivalent voltage
up)....could even be universal with a switch to permit using either battery
type. this way we could use our own recharable cells and toss the bad ones as
they fail rather than entire packs...

>Imagine if every flashlight needed a different size battery. WHAT A MESS!!

if there was one thing that you might be able to beat up the manufacturers for
is this planned uninteroperability...(wow! now THAT's a word!). RCA with the
large hole 45 and the 45-only record players f'instance. All the computer
manufacturers - just how many ways are there to do RS-232? seems like
everyone finds a new way.

If the overseas manufacturers really wanted to throw things for a loop, they
would develop standard parts that were interchangeable. but doing that means
that everything will look about the same & there'll be less of a difference
between your product and the other guy. can't have that. eats into the
profits.

would seem like there would be an opening for 3rd party batteries for things
like camcorders but the market probably sees enough design jitter to keep
someone from being able to make a few models profitably.

maybe some of the MBAs need to actually have to use their company's products
for awhile and have to discover what it's like to find you don't have the
right plug or something that prevents you from using your equipment with

someelses even tho the two machines are otherwise fully compatible...

-- MONTHLY REVIEW OF SOLAR AND GEOPHYSICAL ACTIVITY --
Summary for August 1993

Report compiled by the
Solar Terrestrial Dispatch
P.O. Box 357
Stirling, Alberta
T0K 2E0, Canada

Data Provided In-Part Courtesy of the
Space Environment Services Center, NOAA
and the
NRC / Dominion Radio Astrophysical Observatory
Penticton, British Columbia, Canada

MONTHLY ACTIVITY SUMMARY FOR AUGUST 1993

We are now in month 85 of solar cycle 22 (as of Sept 1993). There were 152 flares (optical and x-ray) in August. This is a decrease of 25% over the number of events observed in July. No major flares were recorded and only 1 M-class flare was observed.

A breakdown of the energetic events for the last four months follows below.

	AUG '93	JUL '93	JUN '93	MAY '93
Major	0	0	3	0
Minor M-class	1	4	10	5
Class C or smaller	151	198	315	280
Total	152	202	328	285

The monthly sunspot number for August was 59.4 as computed by the SESC. The preliminary RI international sunspot number for August was 42.0. The preliminary smoothed international sunspot number centered on February of this year was 69.2.

The monthly 10.7 cm solar radio flux for August was 93.7 which results in a preliminary smoothed mean flux value of 123.0 centered on February 1993. The monthly mean solar flux adjusted to 1 AU was 96.0. The best absolute value of the estimated 10.7 cm solar radio flux for the month was 86.4 (Series D).

The largest flare of August occurred on 11 August from Region 7562 at 10:23 UTC when a class M1.5/SN event erupted. A moderate (Importance 2)

Type II sweep accompanied this event from 10:23 to 10:41 UTC.

The most eruptive region during the month proved to be Region 7562,
which was born on August 10 at N09W31 and quickly grew to a maximum size of
220 millionths in a bipolar magnetic configuration before beginning to decay.
It was responsible for 21 small flares, 4 of which were C-class events. These
unimpressive statistics demonstrate the inactivity of the sun during this
month of the declining phase of cycle 22.

A very weak proton enhancement at greater than 10 MeV was noticable in
proton fluence patterns during August. The enhancement began on 08 August
and continued until approximately 14 August when protons fell back to near
background levels. Protons at greater than 10 MeV reached a maximum of
approximately 0.6 pfu near 13:30 UTC on 11 August. A source for this weak
enhancement was not identified.

The list of minor M-class or greater flares and associated radio
emissions observed during August follows:

SUMMARY OF MAJOR ENERGETIC EVENTS

Date Begin Max End Xray Op Region Locn 2695 MHz 8800 MHz 15.4 GHz
------ ---- ---- ---- ---- -- ------ ------ --------- --------- ---------
NO MAJOR ENERGETIC EVENTS OBSERVED.

SUMMARY OF MINOR M-CLASS EVENTS

Date Begin Max End Xray Op Region Locn 2695 MHz 8800 MHz 15.4 GHz
------ ---- ---- ---- ---- -- ------ ------ --------- --------- ---------
11 Aug: 0954 1023 1035 M1.5 SN 7562 N07W48

REGION FLARE STATISTICS

C M X S 1 2 3 4 Total (%)
-- -- -- -- -- -- -- -- --- ------
Region 7556: 0 0 0 1 0 0 0 0 001 (0.7)
Region 7558: 2 0 0 16 1 0 0 0 017 (11.2)
Region 7560: 0 0 0 1 0 0 0 0 001 (0.7)
Region 7562: 4 1 0 20 0 0 0 0 021 (13.8)
Region 7563: 3 0 0 8 0 0 0 0 008 (5.3)
Region 7566: 1 0 0 6 0 0 0 0 006 (3.9)
Region 7568: 0 0 0 1 0 0 0 0 001 (0.7)
Uncorrellated: 12 0 0 0 0 0 0 0 097 (63.8)

Total Events: 152 optical and x-ray.

The geomagnetic field was slightly more active in August than in July.
The estimated planetary A-index for August was 12, compared with 10 for July.
This gives an estimated smoothed value of 15.9 centered on February 1993.
There were no sudden magnetic impulses recorded during August.

The most active days of the month were 16 and 17 August. The estimated planetary A-indices for these days were 66 and 35 respectively. This disturbance was produced by a high-speed solar wind stream from a well-placed positive-polarity transequatorial coronal hole, as inferred from Yohkoh x-ray imagery. It is interesting to note that this coronal feature has been responsible for producing recurrent 27-day enhancements in geophysical activity over the last several solar rotations. Its recurrence in September was responsible for major to severe geomagnetic storming (see the September review of activity to be released in October for additional detailed information). Minor to major storming was associated with this August storm event. Periods of severe geomagnetic storming were reported by many high and polar latitude stations.

There is fairly high confidence that this coronal hole, which joined with the northern polar crown and expanded longitudinally in September, will continue to prove geoeffective around October 9 or 10 during Carrington rotation 1874.

The lowest smoothed sunspot number for Cycle 21, RI = 12.3, occurred in September 1986. The sunspot maximum for this cycle (cycle 22) occurred in July 1989, with a peak smoothed sunspot number (RI) of 158.1.

Note: Prior to June 1991, the 10.7 cm solar radio flux measurements originated from the Algonquin Radio Observatory near Ottawa. From June 1991 onward, the flux has been (and will continue to be) measured from the Dominion Radio Astrophysical Observatory at Penticton, British Columbia, Canada.

2460. Boulder Hamfest

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-19 03:42:29 UTC
From: mcaffrey@nyx.cs.du.edu
Message-ID: <1993Sep19.034229.15833@mnemosyne.cs.du.edu>
Source record: 276088

The Boulder Amateur Radio Club will be holding its annual Hamfest at the Boulder County Fairgrounds, off Hover Road in Longmont, CO. The time is from 8-1 on Sunday, September 26.

Things of interest:
Door prizes include a computer and a Kenwood TS-50
Seminar includes a forum on youngsters in ham radio. Definitely of interest for children, or those with children.

As in past years, there will be lots of dealers for both computer equipment and ham equipment.

Admission $3.

For more information, e-mail mcaffrey@nyx.cs.du.edu.

Mark, KF0JA

Interesting. I'm not at all dyslexic (I've always been a fast reader
and perfect speller), and I don't do cursive, either. I gave it up as
soon as I got to college, never having liked it much. I do very nice
italic-style printing which is faster than most people's longhand, and
much more readable. I also type very fast (>70 wpm).

Was cursive a kluge that became obsolete when dip-pens disappeared?

Hear, hear! It's also a good way to deal with weird covenants of any other sort. Sooner or later these folks will realize that the yuppie era is dead and we're not going to pay extra to be restricted!

Around here the best local appraiser happens to be a ham... that helps, too!

I measured my handwriting speed years ago, and it was 18 wpm in rather neat
printing (or sloppy italic calligraphy, depending on your point of view).
That was a comfortable speed, without hurrying.

>when I am lecturing and write stuff on the blackboard, then start to talk
>about the stuff I wrote down, it can take a long time for most people to
>stop writing and start listening. Maybe it's just cos they are Texans

Happens here too, and even happened to me at Yale (where I was a T.A.).
I don't know what most students are _doing_ when they take notes!

[This is going to be long, and if you are not interested in reading
personal annedotes which reflects somewhat about similar topics, hit
'n' now, skip this before you blame me for writing such a long one,
with little argumentative juicy flames, etc :)]

Hmmmm, where do I start? This is such a huge topic (much more than
the subject line can say). I feel like posting, or IOW, wasting some
bandwidth here. (I haven't been reading r.r.a.* for a while, and I
stumble on this thread, whaw, very interesting :).

So, instead of including to respond to all those long "points" and
comments, I'll make some collective responds here. Hopefully it's going
to make sense to you.

There are actually 2 main topics: people and technology. (well, may be
a third, is their relationship in different essence.)

But first of all, let me respond to ARES topic, because that reminded me
of something, just a personal annedote. No, may be I should cut it short.
I feel very much the same way, when posters described, or when talking to
fellow hams, about what they felt about some people/organizations.

1. A local ham club; lots of elderly folks; don't seem like wanting to
talk to me, a stranger, who wants to get into amateur radio. One question
though, I got asked many times by them (not only old folks) is that if
I have morse code priviledge, I said not, then I was asked if I intend to,
I politely said yes if I have time. And that's all they want to know.

My feeling after a few of these incidents:
I have been very interested in "walkie-talkie" since elementary school,
I had been involved in electronics etc since high school, and even though
I got my licence lately, I have learned continuously from way back about
anything built on electronics on the market. Ok, ok, my feeling: I
felt so disgusted, so disappointed, that the amateur club is not anyway
a friendly environment, but rather a snobbish, arrogant, and exclusive
club (probably worse than those I've seen in college fraternities!) Where
did I read about those hams always want to help newcomers? (to get exams,
in my examples, where I didn't get the materials on studying as promised
by their prominent certified examiner, but this is another story.) I
felt very put off by the whole hobby, and said to myself: if this is all
what amateur radio is about, just like those described on the net: old
men, or fat guys, sit in front talking on radios all the time: must be
HF, should be CW, oh only true hams do that... sorta type. (I know
I am bad of grossly generalization, but it matched what I feel, and what
I read from others also.) Well, I almost wanted not to get into
amateur radio afterall, if not I still have keen interest in how cool

to use "walkie-talkie" etc, or neat to use, just that IDEA is so COOL! (yea, I am a techo-nerd, according to North American popular human definition.)

One of my co-worker (whose good friend is a ham too), commented once to me, when I said I was excited to get my license etc: "I haven't met/seen any hams who are not wierd." (and this guy himself is a techo-nerd too, but just not in hams.) I don't like what he said, but when I think about it, I think I have met and seen or heard a lot of hams, who are quite , err... eccentric. (at least). Again, not good feeling.

Not until I joined the University ham club, whose membership are among students, faculty, staff, and alumni who are in diff. professional fields, and also quite normal, except collectively still a bit "nerdic", or "techno-nerdic" :). I am happy and relieved to find such compatible group, but most of all. At least, some hams are quite normal and diverse, open, friendly, and knowledgable. I find it.

Well, getting out of topic isn't it?
Ok, 2nd incident:
The local ham club, also runs emergency prepardness (where it is going to tie in with this thread.) At one of their public awareness display, I filled in a card to state I am interested in helping out etc. No responses from them. At another one, I questioned some of them, asking why. They said they sent out to all of those who filled out cards. Recommand me to write it again. Ok, I did, and explicitly wrote down I wasn't sent info last time. Again, no responses. Well, I think it's not me who is loosing something. (I didn't state my qualification or expertise, but did put in my callsign in my 2nd attempt.)

My observations:
These people wear the Emergency Communication windbreaker, hanging around their communication van. Looks pretty good, and I am quite excited to see the van too. Not until I found out those "manning" the van, do not even know anything about anything: ARES affliated? "Duh"; "Oh, yea, I got my marine (most likely limited, or operator) license, because it might be useful in an emergency", said an old ham in the van. (I almost cracked up, since he said he took a class someone prepared for them to take that). This guy who wore all these pins etc, on his cap, and his windbreaker, with a beard, and like in 30', looks pretty cool. It turned out he didn't know much either, for all the things I asked, from their emergency plan, to the city's backup comm. system, to who is the chief in this EC group, nothing, zip, nil. They look official though (probably great in like a publications.) Oh, yes, and they have a bulletin, which has all these disaster/fire newspaper clippings, which only one mentioned EC/amateur radio helped in. The point is well meant, but not proven.
Oh, lots of brochores to take. Good PR, no doubt. (see, the van is given by the City, with some Pub. Ser. radios installed.) Suddenly, they all looked like the description by someone on the net a while ago: "those ARES are just cop-wanna-be". May be they are well trained, and I could be wrong in my judgement of their abilities. Certainly their attitudes

??? They like to explain what the van is about, only to those who don't know anything about it. They don't like quality questions from me. (I was very polite, and didn't do anything even remotely hinting anything bad.)

So much for trying to be a part of our community, and do a part of a share, in something I know better how to. See, I just moved up to Vancouver, Canada, from San Diego, California last year. (I saw a REACT van in San Diego before, but didn't enquire much.) Oh, yea, those guys above, laughed heavily, when someone hinted a joke about those CBers, totally looked down on them. (IMHO, they don't seem to be anything better, even in technical matters.)

Luckily, our university club now might start some cooperative planning with the province and the city on emergency comm. planning. Hopefully more members will devote to it. Strange, isn't it? The qualified always don't want to do it, while the pretenders always want to. Well, read my people part later.

Ok, too much for that, let's go to technology, where I have a keen interest on.

I'd very much like to see high-tech products, like cellular system, etc, available to amateur usage. In reality, amateur will always be amateur, because commercial equipment is expensive for those only do it for a hobby. Who belongs to a rich club, who can afford cellsites, built on 902, or 1.2GHz, for example, all over a local area? That's why there is that cellular phone vs. amateur thing. The gap, though, seems growing bigger. In the old days, technology b/w commercial and amateur is not that big. For one, seeing those tiny but yet sophisticated cellular phone, makes me envy. Amateur HT, by and large, is still using the same technology 10 years ago, i.e. IC-02AT is not much inferior, in terms of usage, than a IC-P2AT today (may be size.) Market, is the biggest problem. I wish we could have better technology, but also affordable. But I don't know how it can be realized.

On topic of amateur equipments serving in emergency situations, and comparing it to, e.g. cellphone. Yea, right, don't we wish that all the cellcites are finally down, so we can really show that our amateur repeaters are the only lasting ones? Or, may be searching for that weak CW signal for help. :). As someone pointed out, both devices have better usage for diff. purposes, in diff. situations. It doesn't really matter what it is: as long as it is wireless, portable, and reliable communication, then it is usable in an emergency. (If CB can be made that well, CB can do, but only CB is short range in portables.)
I do think most posters put too much emphasis on trying to make hams to be excelled in emergency communications, as if they are the only ones around to do emergency comm. All in all, I think all EC groups have contributed tons of efforts, and resulted in very good grades. But, amateurs are amateurs, and they are not paid professionals. We, cannot require amateurs to be trained to work as if they were professional dispatchers, or even medical relief workers. Amateurs EC,

to the best, is only auxillary, to all the public services functions, as a back up, as an aid, as help to establish missing links in communications because of disasters, etc. No, I am not saying amateurs didn't do great in that, but what I am saying, is we can't, and shouldn't expect, them to be EC pros, if the group basis is formed as in amateur radio, which is a hobby after all.

I am afraid, because of this, I might get flamed, or at least, disagreed upon. I have no intent to induce flames, etc. But only I think a few of us here, have been so good at it, that they expected a lot from fellows hams, and therefore got disappointed , because they found out, a lot are not qualified to be that good yet! So, I said, since we are hams, as hobby, EC, as volunteers. Of course, there should be training, and exercises, and planning, but that still doesn't mean we can play "heros". Yes, those who are equipped and qualified, might consider to volunteer to devote to EC, etc. (unfortunately, from all the stories we read here, it seemed it is the opposite situation :( ) And, amateur radio, is more than ragchewing on the repeater, also more than emergency situation "showoffs".

Again, since I am not typing this as a tight argument, I have use terms, and espressions loosely, and I hope it get passed most of you without fire.

About humans, oh, finally.
Now, this is really nothing exactly about amateur radio, or may be a little bit. There are personality traits in every field of professions, and also hobbies. I believe there are personality traits among amateur radio people. That's the reason why we said things like "amateur radio is about elderly men fiddling CW every night, or someone who likes to talk nonstop, etc" Hams are mostly, technical oriented. Do technical types do well in organizing events? leadership? human relations? I am afraid to tend to think that they/we might not do as well, as might some other groups (groups like to mingle with people, and organize things around them.) This is laying the ground works for a theory: the hypothesis being that hams don't do well in expertising emergency communications, especially coordinating and cooperating with other agencies (as pointed out by others here.), and the reason behind it. We need the technical expertise, but we also need leadership. There are 2 kinds of communications here: radio comm. , and human comm. And we need both. (and I wonder if anyone graduated with both : EE emphasis in comm., and Communications (as in speech, etc.) :)
I am saying, partly also based on my experiences in various student organizations in my university days, my experiences in leadership roles, and how I see the changes in attitudes and behaviors in diff. groups. (e.g. a technical oriented one, to one which is not.)

May be someone should do a research in "Hams sociology, communications, and culture".

It's late, and too much babling. Hope no one is taking this too seriously. After all, I am still fascinated with amateur radio, and its technology behind it, despite some unfortunate experiences. (yea, yea, how come this hobby doesn't attract the popular crowd?? Scientificphobia in

North America education system?)

Good hamming,

Bye,
David

I used to have what they called "copperplate" handwriting, but I haven't
used it in a long time. Still, I was very surprised when the best I could
do was an illegible scrawl. I've used mainly typewriters and computers
for the last 30 years, so my handwriting has degenerated to uselessness.
I type a fairly clean 120 WPM on a good keyboard.

>personal annedotes which reflects somewhat about similar topics, hit
>'n' now, skip this before you blame me for writing such a long one,
>with little argumentative juicy flames, etc :)]

I'm not going to quote David's article, but I hope everyone read it.
It expresses very well the confusion, frustration, and angst about
amateur radio that people coming in, or still on the outside, feel.
I sometimes feel like I'm trying to bail the ocean when I preach
on these topics. What David has described is not a fluke. It's
unfortunately the norm. Read his descriptions of radio clubs and
EC members. Do you see yourself or your friends in any of those
descriptions? Of course you do, or you're fooling yourself.

It doesn't have to be this way. When I was introduced to amateur
radio as a youngster of 14, I didn't see it this way. The reason
was that our club didn't *want* it to be this way. They went way
out of their way to make sure I felt a part of the group. They
were unfailingly friendly and helpful, though I'm sure that they
must have bit their lips a few times watching a 14 year old stumble
about learning the ropes. They had set up two complete club stations
in their clubhouse so that newcomers like me could gain operating
experience before we could earn enough money to get our own
super stations. After they checked us out on the equipment, they
issued us a key to the clubhouse and said "Have fun!" There was
rarely an afternoon when the clubhouse was empty. They held well
attended classes for *licensed* amateurs as well as for those
wishing to earn a license. They felt, correctly, that amateur
radio is supposed to be a lifelong learning experience, and that
those who don't continue to learn will fall behind and stagnate.
Eventually even *I* began teaching courses, on subjects I enjoyed,
that were attended by people who had helped me get a license.
No one person likes or knows everything.

We had an EC van, bus actually, that we built to support our
city and county communications systems. It had public service
and amateur radios, three portable repeaters, and a field
telephone switchboard. All the club members were trained on
the systems, and the local city and county dispatchers were
frequently invited to operate from the vehicle as well. This
put everyone on a first name basis who might be involved in
emergency comms. Most of the professionals eventually got
their amateur licenses due to this exposure.

Then came the caste system. By 1971 the club had disintergrated,
the dollar a year lease for the clubhouse was returned to the
city, the bus was scrapped, and the club basically ceased to
be. As a young man, I couldn't understand the anger and bitterness
that had sprung up around the club. Suddenly those who did higher
speed Morse knew it all and couldn't be bothered with others.
And among those others, some of whom were the real technical and
organizational mainsprings, bitterness and anger grew. The club
blew apart.

Looking back now with more perspective, I'm sure that (dis)Incentive
Licensing wasn't the sole cause of the club's demise. But it certainly
was a strong trigger. I was, and still am, amazed at how much difference
a little piece of paper can make in relationships among people.

Gary

>Mark, KF0JA

Definitely worth taking in! Bring your bucks and your trading stock.
By the way, a hamfest, it's not. A damned fine swapfest, it IS, even
if it is more computer than ham equipment.

In the 20 years I've lived in and around the Front Range area, I've
never heard of a hamfest being held. Does anyone know of any? I'm not
talking about conventions, swapfests, flea markets, etc. Real
hamfests, with tranmitter hunts, antenna efficiency contests, lots of
outdoor events, large steak feeds, camping for those who care to,
homebrew contests, tours of nearby interesting facilities, etc. It's
been almost 20 years since I've been to one of those. How about it?

>Any leads/comments will be greatly appreciated.

Hello,
I have a AEA CP-1 which is just a TU. I now use an intelligent box, but before
I got it I used a program called PCRTTY. It allows the PC to receive the baudot
directly from the serial port. The TU has to have a RS232 output or a
convertor can be used.

Oh Gary, I think you are REALLY drawing straws here; to blame the demise
of this wonderful sounding club on a group who use higher speed Morse
is really a thin arguement. Certainly, none of us were there to witness
this except you, but common sense would dictate that there should be
no connection between a new licensing system, and a club closing down.
There's some pieces to this puzzle missing.

Jeff NH6IL

I've had this happen on Yaesu and Icom radios. Plastic only has
limited strength. The RS unit is heavier than the mini handhelds
as well. A wrist strap can impart a false sense of security with
anyheld, at best its a safety against fumble fingering the unit.
At worst, someone letting the HT swing freely may be in for a nasty
surprise...

'nuff said.

SB SAT @ AMSAT $ANS-261.01
STS-58 SAREX MISSION INFO

HR AMSAT NEWS SERVICE BULLETIN 261.01 FROM AMSAT HQ
SILVER SPRING, MD SEPTEMBER 18, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-261.01

KA3HDO Provides STS-58 SAREX Mission Information

The STS-58 flight of the Space Shuttle Columbia represents the next mission carrying the Shuttle Amateur Radio Experiment (SAREX). STS-58 is currently scheduled for launch on 14-OCT-93 at 14:53 UTC. Spacelab Life Sciences-2 is the primary payload on-board STS-58. During the 13 day (extended duration) flight, the astronauts will conduct around-the-clock experiments on themselves and on living organisms carried in the spacelab module.

The SAREX operations on this flight include voice and packet. Discussions between the astronauts and the SAREX working group indicates that there will be more general contact operations on this flight than was performed on each of the three SAREX flight flown this year. Please remember that this is a preflight prediction. The astronauts and the SAREX working group cannot guarantee this prediction. The following information gives more details on SAREX operations for STS-58.

STS-58 Shuttle Amateur Radio Experiment (SAREX)
Information Sheet

Mission: STS-58 Space Shuttle Columbia
Spacelab Life Sciences-2 (SLS-2) Mission

Launch: October 14, 1993, 14:53 UTC

Orbit: 39 degrees orbital inclination

Mission Length: 13 days (Nominal)

Amateur
Radio
Operators: Bill McArthur (KC5ACR), Marty Fettman (KC5AXA),
Rick Searfoss, Callsign TBD

Modes: FM Voice
Prime callsign KC5ACR

Packet Radio
Callsign W5RRR-1

Frequencies: All operations in split mode. Do not transmit on
the downlink frequency.

Voice Freqs: Downlink: 145.55 MHz (Worldwide)
Uplinks: 144.91, 144.93, 144.95, 144.97, 144.99 MHz
(Except Europe)
144.70, 144.75, 144.80 MHz (Europe only)

Note: the crew will not favor any specific uplink
frequency, so your ability to work the crew will
be the "luck of the draw."

Packet Freqs: Downlink: 145.55 MHz
Uplink: 144.49 MHz

Info: Goddard Amateur Radio Club, WA3NAN, Greenbelt Maryland,
SAREX Bulletins and Shuttle Retransmissions
3.860 MHz, 7.185 MHz, 14.295 MHz, 21.395 MHz, 28.650 MHz
and 147.450 MHz (FM)

Johnson Space Center ARC, W5RRR, Houston, Texas
SAREX Bulletins 7.225 MHz, 14.280 MHz, 21.395 MHz,
28.650 MHz, (SSB) and 146.64 MHz (FM)

ARRL Amateur Radio Station, W1AW, Newington, CT
SAREX News Bulletins
3.990, 7.290, 14.290, 18.160, 21.390, and 28.590 MHz
and 147.555 MHz (FM)

Also, bulletins available on internet, via AMSAT ANS,
Compuserve, and your local PBSS.

School Group Participation: 18 school groups will participate
in SAREX with pre-scheduled direct
and telebridge contacts. These include
17 in the U.S., and one France.

AMSAT Chile Information

The Foundation for the Development of Satellites for Radio Amateurs (Fundacion de Desarrollo de Satelites de Aficionados a las Radio-omunicaciones) or AMSAT-CE was a foundation created by the Chilean Federation of Radio Amateurs Clubs on 23-APR-1992.
Its objectives are scientific and technological in nature and are expected to be realized in the design, construction, launch and operation of amateur radio experimental satellites, in the transfer of technology and in other experiments related to space communications.

AMSAT-CE is a non profit amateur organization which is directed by a Council composed of nine members, all of them licensed radio amateurs: CE2MH Ignacio, President; CE3LD Italo, Vicepresident; CE3AFC Axel, Secretary; CE2HI Carlos, Treasurer; and CE3MVK Victor, CE3GA Eduardo, CE3EOA Patricio, CE3AYS Mario and CE5NG Klaus, Counselors.

Its first project CESAR-1 will be implemented using the new AMSAT-NA satellite bus concept known as "MICROSAT." An agreement for joint cooper-ation between AMSAT-NA and AMSAT-CE was signed on January 20, 1993.

For those interested in finding out more about AMSAT-CE, the address of AMSAT-CE is:

Avda. Portales 4040, Casa 439
P. O. Box 40 Correo 5 Santiago
Telephone 56 - 2 - 773 7831

AMSAT OPS NET SCHEDULE

HR AMSAT NEWS SERVICE BULLETIN 261.03 FROM AMSAT HQ
SILVER SPRING, MD SEPTEMBER 18, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-261.03

Current AMSAT Operations Net Schedule For AO-13

AMSAT Operations Nets are planned for the following times. Mode-B Nets are conducted on AO-13 on a downlink frequency of 145.950 MHz. If, at the start of the OPS Net, the frequency of 145.950 MHz is being used for a QSO, OPS Net enthusiasts are asked to move to the alternate frequency of 145.955 MHz.

Date UTC Mode Phs NCS Alt NCS

2-Oct-93 1400 B 160 WA5ZIB WJ9F
9-Oct-93 1500 B 101 W9ODI N7NQM
23-Oct-93 1315 B 154 WB6LLO WA5ZIB

Any stations with information on current events would be most welcomed. Also, those interested in discussing technical issues or who have questions about any particular aspect of OSCAR statellite operations, are encouraged to join the OPS Nets. In the unlikely event that either the Net Control Station (NCS) or the alternate do not call on frequency, any participant is invited to act as the NCS.

****

Slow Scan Television on AO-13

SSTV sessions will be held on immediately after the OPS Nets a downlink on a Mode-B downlink frequency 145.960 MHz.

Weekly OSCAR Status Reports: 18-SEP-93

AO-13: Current Transponder Operating Schedule:
L QST *** AO-13 TRANSPONDER SCHEDULE *** 1993 Aug 16-Oct 25
Mode-B : MA 0 to MA 60 !
Mode-BS : MA 60 to MA 120 !<- after Aug 30 (hopefully)
Mode-S : MA 120 to MA 145 !<- S transponder; B trsp. is OFF
Mode-S : MA 145 to MA 150 !<- S beacon only
Mode-BS : MA 150 to MA 180 ! Alon/Alat 180/0
Mode-B : MA 180 to MA 256 !
Omnis : MA 230 to MA 40 ! Move to attitude 210/0, 25-Oct-93
Continuous up-to-date information about AO-13 operations is always available on the beacons at 145.812 MHz and 2400.646 MHz in CW, RTTY and 400 bps PSK. Also, these

bulletins are also posted to INTERNET, ANS bulletins, Packet, PACSATs, etc., and can also be found in many international newsletters. [G3RUH/DB2OS/VK5AGR]

AO-13 DX: To let all interested parties know, Pino (I0DUD), Antonio (I0JX) and WB6GYD will be conducting AO-13 Mode-B operations from the Vatican on Saturday, 25-SEPT-93 starting approximately 05:00 UTC and again on Sunday, 26-SEP-930. The call sign will be announced at that time and a QSL route will be established. This operation was previously announced in Oscar Satellite Report. In addition, they plan to spend Friday night (probably 20:00 until 05:00 UTC Sept 24-25 at the Vatican and operate on 20/30/40 meters. All are invited look for them and make a DX contact. [WB6GYD]

AO-16: Operating normally. [WH6I]

UO-22: Operating normally. [WH6I]

KO-23: Operating normally. [WH6I]

MIR: WD8LAQ reports that he heard R0MIR on voice and that stations who wish to also work MIR should understand that the MIR crew is working under Moscow time, which is four hours ahead of UTC. This means that their "free" pre-sleep time (about 12 Noon until 2 P.M. EDT) is a prime window of opportunity for them to be "playing" ham radio during the week. Under normal circumstances, WD8LAQ understands that the MIR crew gets all day Sunday off. WD8LAQ called R0MIR while at hamfest on 145.550 MHz FM voice not expecting much at about 2 P.M. After a couple calls R0MIR came booming in at a signal strength of 20 over S9! Some onlookers could not believe it was really one of the MIR crew because of the strong signal. WD8LAQ is sure they heard him but it sounded like R0MIR was in QSO with someone else. R0MIR said to look for him on the next pass.

ARSENE: ARSENE satellite is no longer responding to telecommands sent by FF1STA station at ENSAE School in Toulouse. Numerous commands have been sent to try to reactivate the satellite without success. It has been since 09-SEP-93 around 00:00 UTC that the last ARSENE signals were heard in Mode-S and FF1STA has not receive any more telemetry from the satellite. The transmissions stopped at the moment ARSENE was coming out of a one hour eclipse period. Contrasting this with before, the SHF power stage temperature never reached more than 42 degrees Celsius before entering into the Earth shadow. The temperature dropped by ten degrees when in the eclipse part of the orbit. FF1STA command station was able to observe telemetry data indicating that automatic system for eclipse power conditions was working fine. All collected telemetry data before the failure is carefully being investigated by ARSENE experts. There will be one last effort to recover ARSENE in the coming week using the FC1ELL EME station in Argenteuil, France near Paris with an 8M dish and high power UHF transmitter. [F6BVP]

RS-12: KB0J was still able to make an "over-the-horizon" DX contact with HK1LAQ on 29.427 MHz and also CY9R on 29.423. The later station was on a "DX-pedition" to ST. Paul Island. Please remember that the uplink for RS-12 is on 15M and the downlink is 10M. [K0BJ]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ W0LJF.#NECO.CO.USA.NOAM. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

SILVER SPRING, MD SEPTEMBER 18, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-261.05

INTANTTRACK Showing Up On QRZ CD ROM

It has come to attention of AMSAT that InstantTrack has been appearing on a CD ROM called QRZ. Some have asked if IT has become shareware. It is emphasised that InstantTrack is not, nor has it ever been shareware. The popular tracking program is the creation of Franklin Antonio who has very kindly offered it to AMSAT as a fund raiseing tool. However, Franklin retains the copyright. Whatever steps have been or are being taken in response to this copyright violation are in his hands.

Franklin has requested that anyone who has bought a QRZ CD ROM containing InstantTrack to please provide him with the following information:

1. Your name and address.

2. Where, when it was purchased. If you purchased the disk in a store, the name and address of the store would be helpful. If you don't know the address, name of store and city is acceptable.

3. A statement that your copy of QRZ CD-ROM does contain InstantTrack. (Look in misc/dl_files/it_track.exe, though it might be elsewhere in different versions of the CD-ROM.)

4. Version #, or date appearing on face of QRZ CD-ROM. (or just xerox the front of the CD-ROM for identification.)

Please address corespondance to:

Franklin Antonio
2765 Cordoba Cove
Del Mar, CA 92014.

Email may also be used but a written letter is preferrd in situations such as this. The email address is: antonio@qualcomm.com.

SB DX @ ALLBBS $OPDX.128
Ohio/Penn DX Bulletin No. 128

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 128
BID: $OPDX.128
September 20, 1993
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DF4RD, DL7VEE & DXNL, DL8AAM, K4CEF & Southeastern Cluster Group and AA4NJ for the following DX information.

3D2, FIJI ISLANDS. Operators JA2AO/ 3D2OH, JA2XW/(N/A), JA2DHG/3D2HG, JA2IVY/3D2YS and JG2BRI/3D2MT will be active from Mama Island from September 23-30. Activity will be on 160-10 meters, CW/SSB/RTTY and the AO-13 satellite. The group plans to be active in the CQ WW RTTY Contest as 3D2VY. QSL via JR2KDN.

3V8W, TUNISIA. This is a classic case of "Work First Worry Later (WFWL)". Various DX bulletins, including the OPDXB, published the rumor that Karl, DK2WV, (who is the QSL Manager for 3V8W) did not know anything about this operation. This is NOT TRUE! Information obtained direct from Karl indicates that he and his XYL have just returned about two weeks ago from a seven week stay in Morocco. Karl states he is the sponsor of 3V8W and is handling the QSL cards. Also, all equipment is still in the country of Tunisia. All of the operation's arrangements were done on a very high diplomatic manner. Plans are in the works for another bigger operation with several other people, but details will not be released until the group gets the "Green Light". Nothing is concrete at the moment. Karl stated that QSL cards for 3V8W will be in the mail November.

9G1AA CARDS (UPDATE). Cliff, AC4NJ, has informed OPDX that he has received this past weekend, 15 kilos of "stateside QSL cards". The 1600 envelopes (containing approximately 3800 cards) will be mailed Monday, September 20th. This means you should receive your QSL card by the end of the week. If you do not receive your cards by next week (September 27th), you may call Cliff at (904) 799-0708 to check to see if you are in the log. DO NOT SEND (REPEAT: DO NOT SEND) cards to AC4NJ for QSLs. Cliff is not the QSL Manager, but has volunteered to check the logs. If you are found in the log you will have to QSL to the new QSL Manager,

Hank, PA3AWW. If you have not sent cards yet, QSL only to PA3AWW, not PA2FAS.

9H, GOZO ISLAND (MALTA). Ralf/DL9XAT, Holger/DL5XAT, Falko/DG3HC and Olaf/DL4HG will be active October 10-20, as 9H3SA, 9H3SB, 9H3SC and 9H3SD, respectively. They plan to participate in the Worked All Germany Contest (WAG) as an outside DL station. They also plan to print a special full color photo QSL. QSL to their home CBA.

FT4W, CROZET ISLAND. The DXNL reports that FT4WD will be active on Sundays on 18135 kHz around 1200z.

RUMOR OF THE WEEK! PALESTINE. There was to be a possible operation from Jericho by DL1UF signing DL2UF/1PL on September 16th. The one day operation was expected to be a 20 meters, SSB and CW operation only. There were no reports of activity by DL1UF/1PL or anyone who sounded like they might be operating from the Palestinian areas.

S2, BANGLADESH. Eric, S21ZG, has been active this past weekend on 17 meters both CW and SSB. Check around 18070 or 18125 kHz between 1300 and 1400z. He was also heard during the week on 14004 kHz, with a good signal with few takers, between 0100 and 0215z. QSL to W4FRU.

TY, BENIN. Ken, WA4OBO, was active from here as TY8OBO and will be returning to North Carolina on Tuesday, September 21st. QSL to WA4OBO.

VK9M, MELLISH REEF. The DXpedition team is using the callsign VK9MM and must of make good traveling time to the reef, because the first spot on the Ohio/Penn Network indicated 1207z. Activity will last until the 28th of September.

YK, SYRIA. Rumor has it that several U.S. operators will be active from here during the CQ WW DX Contests. Stay tuned!

ZB2, GIBRALTER. Gordon, SM4DHF, will be active as ZB2/SM4DHF, from September 22-28. He will be active on all bands CW/SSB/RTTY. Gordon will will be active on September 25-26 during the CQ WW RTTY Contest. QSL to CBA.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

My trusty, old IC-2AT seems to last forever on a
single, small stock battery pack. The IC-U16
commercial version of their IC-04AT seems to
eat batteries for lunch.

It would be nice to have the features of the HTX-202
with longer battery life.

Can you or anyone report the average life
of the stock battery and other ICOM style
batteries when used for 80% listening/20% talking
on the HTX-202?

I've been meaning to get another BP-8 or equivalent
for real long life; maybe that would last a long
time on an HTX-202. Ideas?

Last January I lost one of the belt clip screws of my HTX-202. I
tried to replace it with a similar screw, but I ended up taking out
the RF pcb. When I took the radio in to see if it could be repaired
the store manager offered me the TSP for $50. The cost of repairs if
I hadn't bought the TSP $82.45 for the PCB $40 Labor.

2482. "Digital" to Europe; your thoughts on the best ways?

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-20 01:57:31 UTC
From: slm@world.std.com
Message-ID: <CDMqrv.on@world.std.com>
Source record: 276109
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.misc

Greetings! I hope some folks here on the net can offer some suggestions, advice, and opinions on the following ``problem.''

I am in New England, and want to send a digital message to a friend in Slovenia. Alas, he has no Internet connection :-) ... but he is on ``regular'' (i.e. AX.25) packet.

I have been simply writing my messages on my local BBS (K1UGM), which forwards them to a regional hub in New Hampshire, which then ships them via AMTOR to a system in Croatia (which is down a fair amount), which then forwards themto Slovenia. This can take less than a day with a lot of luck; it also can (and often has) take longer than postal mail.

I'm trying to figure out what might be faster and still reliable, and have been thinking about the following:

* TCP/IP. I hear some folks are experimenting with ``encapsulating'' TCP/IP ham messages in Internet to get them ``over the pond,'' which seems nice, fast, and reliable (no worries about solar flares). However, my friend on the other side isn't on TCP/IP (actually, neither am I yet, although I will make the effort to set up and learn if it seems it will be worthwhile). Could this still work? Are there gateways I could use to send messages reasonably fast to Europe? Could I realistically (not awfully slow) telnet via TCP/IP into a BBS in Europe to forward a message? Can I send a TCP/IP message here and have it get reasonably fast to an AX.25 system in Europe?

* Routing AX.25 through NY. Most international traffic in New England is routed through the hub in NH. However, from what I've read, it looks like New York has a very nice gateway into London; and WA2NDV forwards ``twice hourly.'' I tried getting into WA2NDV myself via 2m AX.25; but through 4 digipeaters, it is too slow to be worthwhile. What about sending a message on my local 2m AX.25 board and somehow routing it to go through WA2NDV? Can I do this--tell a message on a BBS how I want it routed? Would I then I need to know an entire path also from London to Slovenia? [Please excuse me if these questions seem painfully elementary, but I'm curious and don't know]

* AMTOR myself to 9A0APL. I've never used AMTOR but have the capability (PK-232). Perhaps it's worthwhile to send my mail myself to 9A0APL via AMTOR, instead of having the NH hub do it for me? Could I sign onto the system myself and send a message to forward somewhere else, like on a packet BBS?

* Internet/packet gateway? There's such a thing in the States, I know; but is it possible to send an Internet message to a system in Europe that would

then put it back into the packet system there?

* Any other ideas? (i.e. HF packet, which I heard is terribly slow, or something else)

Thanks for your thoughts. Although what I have been donig (using the local 2m BBS) has been working, I'd really like to know more about this than just posting on a local BBS and having the messages eventually arrive, "somehow," to their destination.

73, Sharon KC1YR

Question: From the WB6NOA review of the HTX-202, I got the impression that the
Icom battery packs wouldn't lock onto the '202. Any comments? Is this
true? How do you get around this? I've been thinking about building the
battery pack from the last ish of QST for the one I'm buying and putting
the voltage regulator into the alkaline battery holder. Has anybody done
this? How well does it work?

The DSP nicad charger chip is the ICS1700. They also have one called the ICS1720 for Nickel-Metal Hydride batteries. I don't have an address for "Integrated Circuit Systems", however I do have an address for a crowd in the UK that market these chips.

"Amega Technology"

Roentgen Road
Daneshill East
Bassingstoke
Hampshire RG24 0NG
ENGLAND

Tel: 0256 330301
Fax: 0256 330302

There is a small article on p.252 of the March 1993 "Electronics World + Wireless World" about these chips. They have 8 (yes, that's eight) different ways of detecting the end-of-charge point, including thermal, peak detection, inflection point, etc. They use a pulsed, peiodic current reversal charge (reflex charging), and after the battery is determined to be fully charged it reverts to a "maintance mode", which keeps the battery topped up with occassional discharge/charge pulses.

I suggest you Fax the above company if you want more info - I have about 30 pages of stuff, including technical data, description of operation, etc. There are also Demo and Evaluation boards available. Price was around 10 pounds (about US $15 I think) per chip, less for 10 or more - that was quoted in April of this year, it's probably changed by now. From the info I have, it sounds like the "ultimate" nicad charger! At least with current technology...

Disclaimer: I haven't actually dealt with the above company - my info came via a friend who has dealt with them. Several of us intend to place a bulk order for these chips, but the guy who's in touch with the company has been too busy so far. The above

information is given in good faith, but you're on your own...

FROM THE UNITED KINGDOM TO AUSTRALIA
(WALES TO WAHROONGA) VK2WAH

On the 22nd September 1918, the first direct wireless message from the United Kingdom to Australia was received at Wahroonga, 20 kilometres north of Sydney. The first message was sent by Marconi, for the then Australian Prime Minister Billy Hughes who was visiting his birthplace in Wales at the time, to Ernest Fisk, Managing Director of Amalgamated Wireless (Australasia) Limited.

A new Association has organised a gathering of people to attend the Monument, on Wednesday 22nd September 1993, at the old Fisk house "Lucania", at the corner of Stuart and Cleveland Streets, Wahroonga commencing at 0100 UTC (11am local time) to commemorate the event. 400 school children will be addressed by guest speakers including the Mayor of Kuring-Gai, Sir Ernest Fisk's son, the Managing Director of A.W.A., a Past President and Honary Life member of the Wireless Institute and the Senior Vice-resident of the Royal Australian Historical Society. There will also be representatives from numerous local and historical groups and members of the public.

Amateurs are most welcome to attend.

Also next Wednesday amateur radio operators from the area who have formed a new group, the WAHROONGA AMATEUR HISTORICAL RADIO ASSOCIATION (WAHRA), using the callsign VK2WAH will attempt to re-enact the event of seventy five years ago. The attempt is being made in conjunction with the Dragon Amateur Radio Club of Gwynedd in Wales and it is hoped that a tradition will start for a Wales to Wahroonga and Wahroonga to Wales contact to be made every year on the 22nd of September between the two groups.

VK2WAH will be operating in conjunction with the Dragon Amateur Radio Club of Gwynedd in Wales for 24 hours only, working U.T.C. time. The main frequencies for our station will be 14.170 phone and 14.035 CW the Welsh station GB2VK will be operating on 14.270 phone and 14.050 CW. VK2WAH will be monitoring GB2VK as much as possible and will try to make a contact on the hour on the Welsh voice frequency at hourly intervals whilst propagation exists. We will also be working on CW as much of the 24 hour period as possible and most certainly whilst we have propagation between Wales and Wahroonga. After we have made contact we will move to the Australian frequency to allow other amateurs to

contact both stations. It will be a challenge to contact and receive cards from both sides of the world. Shortwave listeners may be able to hear us working one another. There will be a special award for the station or stations worked by VK2WAH at the exact time slot seventy five years later than the time when the first message was received.

VK2WAH will try to work other bands during the 24 hours, as time permits, these frequencies will be 3.570, 7.070, 21.170, 28.570 or thereabouts depending on QRM and propagation. Locally the call may be heard on 2 metres FM, and 2 metres packet.

A QSL card may be obtained from one two-way contact. Australian amateurs should include a self addressed stamped envelope with their cards. Overseas operators should send a self addressed envelope and include the necessary IRCs for return postage airmail or surface). Shortwave listeners will be eligible to receive a QSL card on receipt of a report of a contact with the station plus the appropriate addressed envelope. Cards will also be available via QSL bureaux. All cards must reach Australia before 1st January 1994 to be eligible.

Applications should be addressed to:
VK2WAH, P.O.Box 600, Wahroonga, N.S.W. 2076. Australia.

Jo Harris (VK2KAA) President
Wahroonga Amateur Historical Radio Association.
SYDNEY 'phone (02) 489 4393.

> sort. Sooner or later these folks will realize that the yuppie era is dead
> and we're not going to pay extra to be restricted!

Where do restrictive covanents get their power? (There must be some law
that provides for them)

I was reading the PRB-1 info from the league and I understand how PRB-1
doesn't help with covanents. But I must take issue with one statement:
"we (the FCC) have no interest in covanents, because it is by the
buyers/leasers choice to buy/lease the property" (paraphrased).
This might have been the case 15 years ago, but I'll be willing to bet that
most ANY new housing has covanents restricting (usually banning) antennas.
I'm sure most developers (like apartment landlords) use "boilerplate" legal
documents from a real estate manual of some sort. It's starting to seem
like less and less of a "choice" anymore...

Just blowing off some steam....

Source record: 276119

Don't worry! Be happy! ARRL and it's DXCC is not all in this world. A lot of hams all over the world have qso with station though they now those qsl cards wont be accepted for DXCC (example: North Cyprus "Republic" area I worked some weeks before... and they were soooo proud just like a new installed DXCC country...). I would be happy about your S21-card indeed even it would not be accepted by ARRL.
By the way: should I send some papers to the ARRL so that my qso's from Germany will be accepted and my qsl cards valid for DXCC? You will smile but that's crazy indeed. Why is a S21 qso not valid in all cases such as my contacts are ??? Aren't they?

>message here and have it get reasonably fast to an AX.25 system in Europe?
>
You will probably find that even if you could get a message to Europe by
this method, it would still be fairly slow on the VHF links into Slovenia
so you wouldn't necessarily gain much over the HF hop to the area. You might
even find that your message would do a hop or two on HF across Europe anyway.

I don't know of any internet gateways in the UK - licence regs are unclear
as to whether it is allowed, and chances are someone would have to pay for
the cost of the internet connection so that makes it even more unlikely.

2492. HAM-server help file

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-20 06:58:44 UTC
From: HAMSinfo@GRAFex.cupertino.ca.us
Message-ID: <gate.L9P60B1w165w@GRAFex.cupertino.ca.us>
Source record: 276067
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

All you might ever want to know about the KA6ETB HAM-server

Hardware:
========

386/25 PC clone
Telebit QBlazer modem
20-Meg file space reserverd for archive

Software:
========

Waffle 1.65
WFSmail 2.03

General Information:
===================

Orders for files are filled between the hours of 0200-0400 daily. This is so those hosts through which the traffic is forwarded are not overloaded. Since we all depend on the generosity of others to carry the mail, it behooves us not to make them angry.

ASCII (text) files are split at about 30,000 bytes or 700 lines (which ever comes first). UUENCODED binary files are split at about 750 lines.

If you are using a PC and you do not have UUDECODE, follow these steps:

1. Order UUDECODE.BAS or UUDECODE.C, and UUEXE515.ZIP.
2. Compile UUDECODE.BAS or UUDECODE.C on your system.
3. Use the resulting executable to UUDECODE UUEXE515.ZIP. UUEXE515 has documentation about UUENCODE/UUDECODE.

You are all set to start ordering binary files from HAM-server.

/hamradio/newfiles/ contains files that have not yet been categorized. You can order a list of newfiles by sending the following in an email.

NEWFILES <date>

<date> is in the form of MM-DD-YY, and is required.

If you order a file and do not get it, check the index to be sure you have spelled the filename correctly. If you have ordered the file correctly, then order a new INDEX, as I may have moved the file to a different directory. The system is still expanding, and I am trying to keep it in managable chunks.

Also, if you have ordered files from HAM-server and do not receive them, it might be because your return path is incorrect. My bounce mailbox fills up quite regularly with bounce messages. And, since the path is incorrect, I cannot contact you to let you know.

Orders must be sent to HAM-server. Orders sent to KA6ETB or HAMSinfo are ignored.

A new INDEX is automatically generated every Sunday and when files are moved or added.

Message Command Language:
==========

There are some general rules for ordering files:

o Commands and operands are not case sensitive.

o Leading spaces are permitted before the command. Commands must be the first token on a line.

o A '#' character as the first character on a line is treated as a comment. The line does not cause an error.

o A line beginning with the string "--" is treated as end of input. The remainder of the message is ignored.

The commands are:

GET
HELP
INDEX
NEWFILES
PING
QUIT

The GET Command:

The GET command sends the requested file. The syntax for the GET command is:

GET <filespec> [uue[ncode] | xxe[ncode]]

<filespec> is required. <filespec> must specify a path, but without a drive specification. The filespec is not relative to any directory.

uuencode or xxencode is optional and may be abreviated as "uue" or "xxe", respectively. If neither are specified, the file is sent according to the file extension. Files with these extensions will be sent encoded:

com exe zip pak arc arj gif lzh lha zoo z tar

If uuencode is specified, the file is sent uuencoded.

If xxencode is specified, the file is sent xxencoded.

For example:

GET /hamradio/00-index.txt
GET /hamradio/utility/uuexe515.zip uue

are syntactically correct.

The HELP Command:

The HELP command gets this file.

The INDEX Command:

The INDEX command sends an index of files available from HAM-SERVER.

Use

GET /HAMRADIO/00-INDEX.TXT

to get a description of some of the files.

The NEWFILES Command:

The NEWFILES command sends a list of files newer that the user
specified date.

The systax for the NEWFILES command is:

NEWFILES <date>

<date> is required. <date> has the form of mm-dd-yy. HAM-SERVER is
strict about checking the form of <date>; if it does not look like
it expects, the command will be rejected.

A valid specification for the NEWFILES command is:

NEWFILES 02-15-92

The PING Command:

The PING command causes HAM-SERVER make a simple reply, via the
session transcript, to the requestor. To test the path to HAM-SERVER,
send the PING command.

The QUIT Command:

The word "quit" as the first token on a line causes HAM-SERVER to
quit processing input as if end of input had occurred.

2493. Mil surplus info wanted

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-20 08:08:52 UTC
From: regnad@gnu.ai.mit.edu
Message-ID: <27joekINNe88@life.ai.mit.edu>

2494. amplifier cavity design

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-20 09:54:25 UTC
From: besten@chem.ruu.nl
Message-ID: <9309200954.AA04974@ruucv1.chem.ruu.nl>
Source record: 276121

For a long time I'm looking for the mathematics behind amplifier cavity
design. Designing an amplifier with a 1/4 (3/4 or 5/4) wavelength Lecher is
not a problem. The mathematics and formulas are widely available.
Theory and practice coincide well.
Looking at several cavity designs of tube amplifiers in the 1 - 3 GHz range
it seems that one mode is common: TEM101 (I'm not sure if this is correct).
One can determine that for a circular cavity the diameter is related
to half the wavelength and depends on the capacitance of the tube being used.
The height, mostly fixed due to the physical properties of the tubes,
determines the cavity impedance, I'm told.
I asked numerous SHF-heroes about the formulas behind the cavities. Nobody
could give me a satisfying answer. In fact, most 'designers' admitted that
they used the trail and error approach.
Looking in several books (electronic engeneering, physics, etc) the theory
behind cavities is explained. But I've never seen a publication where
a tube (read: capacitance) is introduced and with what effect on the physical
properties of the cavity.
I want to design an amplifier for 1296 MHz (23 cm amateurband) with a tube
but I will not use the 3/4:5/4 wavelength approach.

Anyone in net.land who has info, examples or references on this subject?

Thanks in advance,

Remco, PA3FYM (besten@chem.ruu.nl)

>ee2g+Charles@andrew.cmu.edu

Ah yes, this Q-code had a very unusual origin: Most folks don't realize this but the small fruit called a kumquat has a laxative effect similar to the prune. Several oldtimers used to gather on 80 meters CW and discuss the wonders of the of the kumquat. Well, it was a rather long word to spell out in CW so they all agreed to make up the Q-code QAT; in use one would ask: "QAT?" meaning "Did you have your kumquats today", to which the other would respond "QAT5" - "I had 5 kumquats today".

Aren't Q-codes and their history great?

Source record: 276031

HAM AND COMPUTER EQUIPMENT AUCTION - Houston Texas area (Clear Lake)

The Clear Lake Amateur Radio Club (CLARC) will hold its yearly
Ham and computer equipment auction: (this is our 5th!)

SATURDAY OCTOBER 23rd

Equipment checkin 8:00am
Auction begins 9:30am

Location: Webster Volunteer Fire Station # 2 located on Texas Ave
in Webster Tx.

Directions: Take I45 North or South towards the Clear Lake area (
South of Houston, North of Galveston). Exit Bay Area Blvd
EAST (away from the mall). The first stop light will be
Texas Ave, turn right. The fire station is about 1 1/2 miles
on the right.

Talk-In: 442.750+ pl103.5 and 146.64-

What is it?
Unlike a swapfest, the auction is just that. You bring you good/bad/ugly
equipment to have it auctioned off. (You can also clean out your closet
and donate it to CLARC so they can raise funds!). Pure junque is ok too!
CLARC depends on YOU to bring stuff to make the auction a success.

Procedures/Rules:

Entry fee: $2.00, gets you a ticket for the door prizes and a
buyer/seller number. Children under 12 free, but they
can't buy or sell

Selling: The item goes to the highest bidder. CLARC takes 10% of the
selling price up to a maximum of $20.. for example, you
sell an old microphone for $25.00, CLARC gets $2.50. You
part with your linear amp for $500.00, CLARC gets $20. OK?

*** You may buy back your own equipment by bidding high.. this
will cost you only $1.00! Hard to go wrong.

All guarantees/warranties are between the seller and the buyer, CLARC
bares no responsibility.

Popcorn and sodas will be sold during the auction.

Proceeds are to support the linking of the 442.750 CLARC repeater to
three affiliated CLARC repeaters. The 444.275 KJ5AZ, the 444.625 WB5WOW
and the 1.2Gg WB5PWG repeater. This club project will greatly increase

coverage across the Houston area. Link radios and antennae will be purchased with these funds.

When you are done selling/buying, you simply come up and checkout. The computer will show you how much you owe or are due. Once you checkout you cannot buy/sell unless you buy a new ticket.
NO Equipment will be released without a signed CLOSEOUT sheet from the treasurer. This protects your stuff and everyone else's!

It's fun, and last year the place was packed with great bargains. So all you folks in the Houston/Galveston area mark OCT 23rd on your calendar. Checkin 8am, auction will run until 1pm or so.

We need your stuff! IF you have equipment you want to donate but can't make the auction, please call 713/488-2036.

See you there

This is probably a tempest in a teapot... it should be no problem to find
a friendly repeater. F'r example, a friend of mine has a repeater set up
on a Forest Service tower in north Georgia and justifies it by saying it's
for emergency/public service use. I haven't asked him, but I'd bet he'd
welcome a neighborhood watch group for that very reason. (The repeater
also hosts a weekly county ARES net, but that's another topic.)

Anyway...

john@anasazi.com (John R. Moore) writes:

>A repeater belongs to someone. If you want to use it for YOUR group,
>on a regular bases, ASK. It's only common courtesy.

This I strongly agree with. Although I munched the relevant text, I also
agree that Northlink (& other linked repeater groups) are not the place
for local/neighborhood exercises. However, if you're a repeater owner
and do not want a public service group on your machine, it's only common
courtesy (dare I say "obligation"?) to help that group find a more suitable
(or more accommodating) repeater.

>Thus, while just waiting for a call, or some one I know, I can tell who
>is who, get the RST report --sometimes a name... or QTH they are in...
>all at a much faster clip, than when I have to write it down letter by
>letter....I can not write faster than 6-7 WPM...and type even worse!

>I wonder then if that has PARTLY to do with it?

>HOW in blazes do people DO 20 wpm writing it down? The copy must look awful!
> -------

I've found that if I'm being graded on copying code, my hand cramps
really quickly at 20 or so wpm because I'm trying to print neatly. I
can write in cursive a little faster, but that's about the limit. I
can type yet faster, but I don't copy code using a typewriter, so I
don't know if my brain would make the connection between a sound and a
keystroke fast enough.

Usually for higher-speed ragchews, I just write down the word or words
that will remind me what to say when I want to make a comment/reply,
and the rest just goes into my (short-term) memory.

But I never use CW if it's not fun. That's my only rule about Morse
code.

And.... oh, yes, the copy *does* look awful :)

73,
Dave

QRP Amateur Radio Club International
Operating Awards Program

The objective of the QRP ARCI Operating Awards Program is to demonstrate that "power is no substitute for skill". It encourages full enjoyment of Ham Radio while running the minimum power necessary to complete a QSO and thereby reducing QRM on our crowded bands. QRP is defined by the club as 5 watts output CW and 10 watts PEP output SSB. The following awards are available to any Amateur. Requirements are set forth below.

QRP-25

This award is issued to any Amateur for working 25 members of QRP ARCI while those members were running QRP. Endorsements are offered for 50, 100 and every 100 thereafter. To apply send list of members worked. List should be in numerical order.

WAC-QRP

This award is issued to any Amateur for confirming QSOs with stations in all six continents while running QRP.

WAS-QRP

This award is issued to any Amateur for confirming QSOs with stations in 20 or more of the 50 states of the USA while running QRP. Endorsement seals are issued at 30, 40 and 50 states confirmed.

DXCC-QRP

This award is issued to any Amateur for confirmed QSOs with 100 ARRL countries while running QRP.

1000-MILE-PER-WATT (KM/W)

This award is issued to any Amateur transmitting from, or receiving the transmission of, a QRP station such that the Great Circle Bearing distance between the two stations, divided by the QRP stations power output equals or exceeds 1000 Miles-per-Watt. Additional certificates can be earned with different modes and bands.

QRP-NET (QNI-25)

This award is issued to those members completing 25 check-ins into any individual QRP ARCI net. Subsequent 25 QNIs in another net will earn an endorsement seal. Net managers send a list of those qualifying to the Nets Manager at the end of the month. Awards are issued FREE

to those qualifying by the Awards Chairman as information is received from the Nets Manager.

NOTES

1) The fee for all awards, except QRP NET (QNI-25), is $2.00 US or 10 IRCs. Subsequent Endorsement Seals are $1.00 or 5 IRCs. Make checks or money orders (preferred) payable to QRP ARCI. Cash accepted, but not recommended through the mail.

2) GCR List (General Certificate Rule): QRP ARCI will accept as satisfactory proof of confirmed QSOs and that the QSLs are on hand as claimed by the applicant if the list is signed by: (a) a radio club official, OR (b) two amateur radio operators, general class or higher, OR (c) notary public, OR (d) CPA. If you must send QSLs, please include postage for their return. Neither QRP ARCI or the Awards Chairperson are responsible for lost or damaged QSLs.

3) QRP ARCI member numbers are not published. The Awards Program will accept as satisfactory proof for any of the club awards a QSO with a club member giving their membership number and power output in the log data. If the QRP number and power are not given a QSL is required for confirmation. See Note 2 above.

4) Endorsement seals are available for a) One Band, b) One Mode, c) Natural Power, d) Novice and e) Two-way QRP if log data so indicates.

Send Applications to:

QRP ARCI AWARDS CHAIRMAN
Chuck Adams K5FO
830 Waite Drive
Copper Canyon, TX 75067-8581

2502. UOC?

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-20 14:05:11 UTC
From: drenze@icaen.uiowa.edu
Message-ID: <1993Sep20.140511.15349@news.uiowa.edu>
Source record: 276127

Question...I was tuning across the lower end of the AM dial today and came across something I've never found before...right at about 530 kHz is what appears to be a beacon. It continually transmits the three-letter group 'UOC' (though the 'O' might be a 'K', 'cause the middle dah is just a smidge shorter than the rest of the dahs in the group, but longer than the dits).

Anybody know what this is?

Tnx es 73 de Doug N0Z??
05W 00D 20H 05M and counting...

Satellite, shortwave and other electronic media news from Radio Sweden.
This week's bulletin was written by George Wood.

Packet Radio BID SCDX2187

All times UTC unless otherwise noted.

NORDIC MEDIA NEWS:

RADIO SWEDEN--Beginning September 26th, Radio Sweden will be broadcasting in English:

To Europe:

17:15 hrs on 1179 and 6065 kHz
18:30 hrs and 21:30 hrs on 1179, 6065, and 9655 kHz
22:30 hrs on 1179 and 6065 kHz
23:30 hrs on 1179 kHz

To East Africa and the Middle East:

18:30 hrs on 15145 kHz

To Asia and the Pacific:

12:30 hrs on 15240, 17740, and 17865 kHz
23:30 hrs on 11910 kHz
01:30 hrs on 9695 and 11695 kHz

To North America:

13:30 and 14:30 hrs on 15240 and 17870 kHz
02:30 and 03:30 hrs on 9695 and 11650 kHz

To Latin America:

00:30 hrs on 9695 and 11650 kHz

The broadcasts at 17:15, 18:30, 21:30 (weekends only), and 22:30 hrs are relayed on satellite on Astra transponder 26 (Sky Movies Gold) audio 7.74 MHz

and Tele-X on 12.207 GHz (TV4) audio 7.38 MHz.

SWEDEN--The big media news in Sweden is the impending industrial action at the public service Swedish Broadcasting Corporation, home of Radio Sweden. Recently the corporation signed a new contact with the Swedish Journalists Union. But negotiations broke down with the union representing other employees. Last week the union officially anounced a ban on overtime by more than 1000 members, beginning on September 23rd.

The ban covers most employees working for Swedish Television in Gothenburg and Malmo, as well as all sound and service technicians working for the Swedish Radio, including the local radio stations. (TT)
During previous industrial action, news programs and Radio Sweden were allowed to continue without hindrance. It remains to be seen if that will be the case starting Thursday.

TV4--Sweden's Broadcast Council has once again ruled that the country's only terrestrial commercial channel, TV4, has violated its licence by broadcasting advertising in the middle of programs. It's the 8th time the board has ruled against the channel, which now says that it will stop the illegal practice next week. TV4 had appealed to the government to change the terms of its licence, but the government rejected the appeal in May. (TT)

DECODERS--The Swedish government has also proposed a ban on pirate decoders to avoid paying for cable TV and radio. The ban would only apply to the manufacture, rental, and installation of such decoders, so private individuals would still be allowed to own pirate decoders. If passed by parliament, the ban would go into effect on January 1st. (TT)

There's a lively business in pirate decoders in Sweden because of high cost of cable-TV. A basic package with 5 Swedish channels and the 5 or so most common English-language channels costs around twenty-five dollars a month from Stockholm's largest cable network. Swedish Telecom's network, the largest in the country, charges an extra 10 dollars a month for a mandatory decoder, with subscribers forced to rent extra decoders for extra outlets in their homes.

By contrast, in the United States, the Federal Communications Commission recently passed new rules controlling cable rates, forcing many systems to lower their prices for the standard 30 to 46 channel packages. In northern California, for example, these now cost between twenty and twenty-three dollars a month. Also the charge for converter and decoder boxes have to be based on what those devices actually cost the cable operators, and operators can no longer change extra for homes with multiple outlets. ("Santa Rosa Press-Democrat")

THOR--The pay-TV package on Norway's Thor satellite is now complete. MTV has joined CNN, Eurosport, FilmNet Movies, and a joint transponder combining Discovery and the Children's Channel. With the exception of FilmNet, which is in D2-MAC, these all use the obscure D-MAC standard, and all use the even more obscure Eurocypt S coding system. Although, so far only advertised in Norway, the Thor package is intended as well for Finland and northern Sweden,

which have difficulty receiving Astra.
("Skyguide" and "SatNews")

But Norwegian Telecom, which operates Thor, wants around 8 dollars a month for the service, without FilmNet, which costs extra. This may be more than many Scandinavians are willing to pay. In comparison, Sky's basic Multi-Channel package, with all these channels plus at least nine more, is available for 7 pounds, or around 10 dollars, a month.

Meanwhile, in the United States, satellite subscription packages range from under nine dollars a month for 11 channels to 20 channel offerings for under 15 dollars and 31 channel packages with several film channels for 50 dollars a month. ("Satellite TV Weekly")

EUROPEAN MEDIA NEWS:

MTV--MTV's move to Thor adds fuel to the speculation that the channel is planning to encrypt its Astra feeds in mid-1994 using Videocrypt. Previously these claims were denied by the company, even though when British Sky Broadcasting began advertising for its multichannel service it claimed that MTV would be included within the encryption package.

MTV executives protested to British Sky Broadcasting and the advertisement was changed. According to "SatNews", engineering sources at MTV and News Datacom say that several Videocrypt encoders have been ordered by MTV. ("SatNews")

MTV has also appeared on Eutelsat 2F1 on 11.658 GHz. The programming is currently identical to the Astra version, although in the future it is understood that this outlet will be used to offer specific programming (and advertising) to Germany. "Sky Guide" speculates that MTV's appearance on Eutelsat could also be to counter the future opposition of German youth channel "Viva", due to launch in October on the same satellite. ("Skyguide" and James Robinson)

SKY CHANNELS TO EUROPE?--Now that the Sky Multi-Channel package is running, British Sky Broadcasting's owner Rupert Murdoch is planning to work with the German channel Pro 7 to launch a package of subscription satellite channels throughout Europe. The agreement, made at International Funkaustellung '93, is understood to pave the way for the marketing of six English language channels, initially in Germany, and eventually throughout Western Europe. ("Skyguide")

SKY EXPANDS--Speaking in London recently, British Sky Broadcasting owner Rupert Murdoch also put an end to speculation by confirming his intent to launch a second sports channel on Astra. The second channel is very likely to become a testing ground for pay-per-view events, and according to "Sky Guide", is likely to be up and running in time for the next Premier League soccer football season.

Murdoch's News International has also contracted NTL to join a group developing a multi-channel digital TV system for direct satellite reception in the home. NTL will develop the encoding, decoding and multiplexing

technology. The eventual domestic receiver will be mass-produced under licence for the comsumer market in Europe, Asia and elsewhere. ("Skyguide")

RED HOT TV--The pornography channel Red Hot Television, which is upliked from Denmark, has returned to the satellite airwaves, but not where it was expected. According to "Skyguide" RHTV was unable to secure its previous transponder on Eutelsat 2F1, and the channel is now broadcasting on a completely different satellite - Eutelsat 2F3, on 10.986 GHz.

The channel is alternating between its existing SAVE encryption system, and new Videocrypt-compatible system "Enigma". ("Skyguide")

TURNER BROADCASTING--The Cartoon Channel and TNT broadcast test transmissions on Astra 1C, transponder 37, before their September 17th launch.

The channels will broadcast in English, French, Norwegian and Swedish, with a Spanish language service to follow by the end of 1994, possibly in line with a Spanish audio service for CNN International.

French authorities are apparently unhappy at the prospect of these new channels broadcasting in the French language, apparently viewing the prospect as an invasion of French territory.

The authorities and broadcasters have been lobbying to get the channel to drop the French audio, apparently unsuccessfully so far. The French cultural elite is protesting the broadcasts of Yoga Bear and Fred Flinstone in French as cultural imperialism. The crusade has brought together bitter political rivals from both left and right. The Paris daily "Le Figaro" quoted an unidentified Turner official as accusing the French authorities of attempted "ethnic cleansing" of the airwaves. ("Skyguide" and AP)

FRANCE--Just weeks after MCM returned to TDF1, and viewers across Europe welcomed its return, comes the news that MCM will scramble its transmissions from October 15th. Subscriptions will be made available to European viewers, although pricing details are not known at this time. ("Skyguide")

WORLD RADIO NETWORK--The long-awaited World Radio Network service of international broadcasters in English began tests on Astra on September 15th. They're using MTV's transponder 22, 11.538 GHz, audio 7.74 MHz. The official launch of the new service will be October 1st.

The current relays of National Public Radio from the United States are being moved from Eutelsat. Joining them will be programs from American Public Radio and many international broadcasters. Here is the tentative weekday schedule (British local time):

05:00-05:30 Radio Canada International
05:30-06:00 BBC "Europe Today"
06:00-07:30 NPR "All Things Considered"
07:30-08:00 APR "Market Place"
08:00-09:00 Radio Australia
09:00-10:00 Radio Korea
10:00-10:30 Radio Moscow

10:30-11:30 Radio Netherlands
11:30-12:00 to be announced
12:00-12:30 Voice of Israel
12:30-13:00 WRN Information
13:00-15:00 NPR "Morning Edition"
15:00-15:30 Radio France International
15:39-16:00 Radio Finland
16:00-17:00 Radio Australia
17:00-18:00 APR "Monitor Radio"
18:00-18:30 to be announced
18:30-19:00 Radio Telefis Eireann (Ireland)
19:00-21:00 NPR "Talk of the Nation"
21:00-21:30 Swiss Radio International
21:30-22:00 BBC "Europe Today"
22:00-23:30 NPR "All Things Considered"
23:30-24:00 APR "Market Place"
00:00-01:00 APR "Monitor Radio"
01:00-02:30 NPR "All Things Considered"
02:30-03:30 Radio Netherlands
03:30-04:30 music
04:30-05:00 Vatican Radio

The schedule varies somewhat on weekends and is subject to change. Note that Europe and Britain have the same local time between Sept. 26 and Oct. 24. (WRN)

GERMANY--Managing Director Dieter Weirich announced at the Internationale Funkaustellung in Berlin on August 30th that Deutsche Welle TV will be expanding to 24 hour a day service from 1994. However, the expansion from 16 hours at present would oly be possible if ARD and ZDF agree to work together. (DPA via BBC Monitoring) One wonders what will happen to the American Worldnet programming, which shares the Deutsche Welle transponder on Eutelsat 2F1 (having been kicked off the French TV5 transponder for exactly the same reason)?

PUBLICATIONS--Super Channel's Teletext satellite news service, "In Orbit", is now available to Astra viewers via UK Gold's teletext service. While UK Gold is scrambled, even viewers without a subscription can view the teletext. Weekly satellite news, updated every Tuesday, is available on page 333, with a letters section on 334.

The content of the services vary slightly - Super Channel's version is consistently more critical of Astra and Sky, while the UK Gold version appears (at the moment) to be much more neutral. ("Skyguide")

NORTH AMERICAN MEDIA NEWS:

PARAMOUNT VIACOM INTERNATIONAL--In what will be the biggest media industry merger ever, Paramount Communications Inc. and Viacom Inc. have agreed on a 16.5 billion dollar merger plan. If completed it would signal the passing of the last of Hollywood's major studios to a new generation of corporate leaders.

The new company will be the world's 5th largest media conglomerate, following Time Warner, Germany's Bertelsmann, Sony, and Rupert Murdoch's News Corporation, and pushing Capital Cities/ABC into 6th place.

Paramount is the owner of a major Hollywood film and TV studio. Its 900 movie library includes "The Godfather", "Beverly Hills Cop", and "Indiana Jones." Among Paramount's TV productions are "Star Trek", "Murder She Wrote", and "Cheers".

Viacom is the owner of satellite/cable TV channels MTV, VH-1, Showtime and Nickelodeon, as well as cable networks with more than 1 million subscribers. (AP and "Los Angeles Times")

However, Turner Broadcasting is also reported to be weighing a bid for Paramount. (Bloomberg Business News)

STAR TREK--Speaking of "Star Trek", with the shifting of Paramount's satellite feed channel from the Telstar 301 satellite to Telstar 302, transponder 3, here is the current feed schedule for the two popular science fiction programs "The Next Generation" and "Deep Space Nine" (Eastern Time):

Saturdays:

10:00 AM DS9
4:00 PM DS9
7:00 PM TNG

Sundays:

2:00 PM TNG
4:00 PM DS9
5:00 PM TNG

"Satellite TV Weekly" also lists a TNG feed on Saturdays at 2:00 PM, but this has not been in evidence.

ASIAN MEDIA NEWS:

INDIA--A new 9 channel satellite television service to India is to be begin on January 1, 1994. The nine channels carried by the joint American-India network are to cover: religious and spiritual programming; politics; children's programming, entertainment, music and movies; sports; medicine, health, fitness and sex education; business and economy; and development, environment, and women's issues, science, and technology. Broadcasts are to be over two satellites, the Russian Statsionar 21 at 103 degrees East, and Asiasat. (PTI via BBC Monitoring)

AMATEUR RADIO IN SPACE:

MICROSATS--Ariane launch 59 is scheduled for Saturday, September 25th, between 01:27 and 01:45 hrs UTC. The main payload is the Franco-Swedish Spot-3 satellite, but Ariane will also be carrying a number of small "micro-sats", several of which will be available for amateur radio operators.

The most interesting is the Italian amateur radio satellite Itamsat, which will downlink both voice FM and digital packet radio signals on 435.867 and

435.822 MHz. The commercial Portuguese PoSat will downlink amateur radio signals on 435.250 or 435.275 MHz. Kitsat-B is similar to the first South Korean satellite, now in orbit as KO-23, with digital downlinks on 435.175 and 436.500 MHz. Finally, the American commercial satellite Eyesat-A will sometimes relay digital and FM voice amateur radio signals on 436.800 MHz. (Internet News via Kauto Huopio and "AMSAT-SM Newsletter")

The Ariane launch will be relayed over some satellite links, and will certainly be carried by the Amsat network on many shortwave frequencies.

SHORT AND MEDIUM WAVE AND DOMESTIC RADIO:

ALBANIA--The Voice of America is using a medium wave transmitter in Albania on 1395 kHz to reach the former Yugoslavia. Serbian has beenheard at 03:45-04:00 hrs, and Croatian at 04:30-05:00 hrs. Radio Tirana's scheduled 04:00-04:15 hrs broadcast in German continues to be heard on this frequency. (BBC Monitoring)

BRITAIN--The Radio Authority has awarded LBC's licence and has awarded it to London News Radio. London News Radio's Editor in Chief will be former LBC Managing Director Peter Thornton and the station will employ a number of former LBC staff. Its chairman is John Tusa, former boss of the BBC World Service and currently presenter of the One O'Clock News on BBC Television. The BBC did not know of his involvement until the announcement on Friday. LNR's backers are led by merchant bank Guiness Mahon and French media group Hachette. It will offer a rolling news format on its FM frequency, repeating every 20 minutes throughout the day. AM will be a mix of phone-ins, discussions and news similar to London Talkback Radio. It expects to employ around 160 staff, compared with the 120 currently employed by LBC. LNR will begin broadcasting in October 1994.

Two new stations have been awarded licences. London Country Radio plans to launch in January and will broadcast on 1035 AM. It is backed by the Allied Radio Group. Sunrise Radio will expand Londonwide from their current West London operation. From early 1994 their Asian programming will be heard on the 1458 AM frequency currently used by GLR. Their existing licence for West London will be re-advertised later.

Two further Londonwide licences are expected to be advertised in 1994, at the same time as those for Capital Radio's two frequencies are re-advertised. Unsuccessful applicants in the current round will be able to re-apply then without a further application fee. The licences for Jazz FM, Kiss FM, Melody Radio and Spectrum International were all retained by their respective companies.

The BBC is expected to announce its decision on its proposed rolling news service later than originally planned. It had anticipated making an announcement in September as to whether the service would go ahead and on what frequency. However, it now seems likely that a decision will be held off until October or possibly November. Reports from BBC staffers suggest that a merger with Radio Five to form a news and sport network remains the most likely option. ("AM/FM" via Kauto Huopio)

ESTONIA--Last time we reported on Estonia's closing its international service, although BBC Monitoring reports that Radio Tallinn programs are continuing on FM. Kauto Huopio reports that Estonia seems to be leaving medium wave. He says 1035, 1215, 1332 and 1512 kHz have been more or less quiet lately. Kauto says it is also rumoured that Estonia is moving their FM radio very rapidly to western FM Band, at first to 100-108 MHz and then to full 87.5-108 MHz. (Kauto Huopio, Finland)

LATVIA--A new station calling itself Brivi Veji ("Free Winds") has been heard on 945 kHz. A relay of VOA Europe has been carried at 12:00 hrs. (BBC Monitoring)

LIBERIA--Radio ELWA, the station in Monrovia operated by the Christian religious organization, the Sudan Interior Mission, has been heard again on 4760 kHz after a break of three years. It's been heard at 16:30-22:00 hrs and also announces a morning transmission starting at 06:00 hrs. (BBC Monitoring)

LITHUANIA--Baltic Radio International in Lithuania, widely believed to be a chimera, has started building work at its new transmitter site near Butinges. BRI is to build six radio masts, a transmitter building, generator and official premises with a reserve studio, all costing 1,400,000 pounds. BRI programs will consist of pop music, with several minutes of advertisements every hour. (Lietuvos Rytas in FDXA "Euronews")

As we reported last week, BRI is to use 684 kHz (and was to be on the air "this summer" according to General Manager Paul Rusling).

NICARAGUA--Radio Sandino has moved from 760 kHz to a new and stronger transmitter on 740 kHz. (Radio Sandino via BBC Monitoring)

NORWAY--The Norwegian student station UKE-Senderen, in Trondeheim, will be on the air again during the annual UKA festival, which this year is from the 22nd of October and until the 14th of November. The frequencies are 1485 kHz and 7245 kHz. (Jon Gunnar Solheim, via Internet News and Kauto Huopio)

PALESTINE--According to Radwan Abu-'Ayyyash,chairman of the Social Solidarity Society, the Palestineans will launch regular radio and television broadcasts within four months of the implementation of self-rule in Gaza and Jericho. (BBC Monitoring)

RUSSIA--Moscow has two different MW radio stations for motorists. Avtovolna is at 0300-0600 on 1116 kHz. The address is: Ul.Lesnaya 41, Avtobank, Room 412-A, 101514 Moscow. Another station, Avtoradio is on 765 kHz. (G.Grigoriev via BDXC via ARC via FDXA "Euronews")

FUTURE TECH:

HDTV--Cinema-quality high definition television (HDTV) may soon be a reality in European living rooms under a plan launched recently to find a common European standard for digital transmission. A group of satellite operators, broadcasters, manufacturers and regulators have signed a memorandum of understanding in Bonn.

"They are jointly undertaking to make every effort to provide European digital television and to place it on the market as from 1995," said Wolfgang

Boetsch, Germany's Minister of Posts and Telecommunications, after the signing.

The Digital Video Broadcasting Project (DVB) groups 85 members, including at least one Japanese electronics firm. But the core of firms are from Britain, Germany, France, Italy and the Netherlands. Peter Kahl, an official from Boetsch's ministry and the new head of the DVB, told a news conference: "Europe doesn't want to lag behind in these developments." He predicted there would be a standard for satellite transmissions by the end of this year, and a standard for cable services some time in 1994.

All-digital standards use signals similar to those employed by computers and are seen as the way forward for television. The agreement to search for a standard clears the way for the development of a range of advanced television services. Digital transmission can carry large numbers of channels simultaneously, ranging from "multi-channel" satellite services to terrestrial HDTV. It makes possible teleshopping, personal computer link-ups and other interactive services.

"I'm not a prophet, but at a conservative estimate, there will soon be 100 channels on your television," said Kahl. Recently, the European Community agreed to provide 228 million Ecu (274 million dollars) to promote the television technology which will bring cinema-quality HDTV into consumers' homes.

But the EC plan, formulated in July, left the choice of transmission standard to the market. The European group coalesced after the recent formation of an industry alliance across the Atlantic working on a single all-digital HDTV system for the United States. Kahl said the organisation had not requested funds from the EC. It would be financed mainly by membership fees and research would come out of members' own pockets.

The group includes the European Commission as an observer and Britain's Department of Trade and Industry among others. Philips Electronics NV of the Netherlands, Thomson SA of France, Sony Europe, the British Broadcasting Corporation and Germany's Grundig AG are also involved. (Reuters)

Japan's television and video industry has welcomed European efforts to move towards a common digital standard for high definition television (HDTV), industry analysts said on September 13. Currently several transmission formats are used in the world, including NTSC, PAL and SECAM, so a common standard would make it easier from a maker's point of view, an official at a major Japanese consumer electronics company said.

Although Japan uses an analog version of HDTV, it would not mean Japanese makers would have a disadvantage in the European market, analysts said. All manufacturers would need to comply with a new standard for Europe, so that everybody, whether Japanese or European, would be starting from same position, the analysts said. "No one will have a competitive advantage," Camp said. "Everyone will have to make adjustments, not just the Japanese." (Reuters)

The remaining American HDTV proponents were brought together in an American "Grand Alliance" by the Federal Communications Commission recently. At the recent Montreaux ITVS Show, where HDTV was a major topic, the chairman of the FCC Advisory Committee on Advanced Television Service, Richard E. Wiley, invited the Europeans into a "Tres Grand Alliance", to join together with the Americans in creating a single HDTV standard. ("World Broadcast News")

USA--The Federal Communications Commission has held a lottery to determine who wins the right to operate two-way television broadcast systems in nine American cities. More than 1000 companies filed 4100 applications for the 18 interactive and video data service (IVDS) licences, two in each of the nine cities. The IVDS frequencies were previously used for automated river boat traffic.

Lottery winners are expected to turn to one of three companies in the field: Interactive Network of Mountain View, California, Radio Telecom and Technology of Riverside, California, and Eon of Reston, Virginia.

According to Interactive Network, which currently operates a limited service in northern California and Chicago, consumers would pay around 250 dollars for a hand-held reception unit, plus about 15 dollars a month. The service allows viewers to play along with televised game and news programs.

Eon has already signed up Domino's Pizza, the Weather Channel, the J.C.Penney department store chain, and a sports game company to offer interactive programs. For example, a TV viewer using the system could order a pizza, a dress from Penney's, a customized weather forecast, or play along with a football team with a click of their remote control.

On September 23rd the FCC will announce how it will divide up another set of frequencies for what are called personal communication services. Hundreds of companies are vying for the right to offer light-weight, wireless personal communication service phones to the public.

The services will probably not be available until 1995, because the FCC still has to decide how many licences it will grant in each city, whether current cellular licensees are eligible, and the phones' technical standards. ("San Francisco Chronicle")

Sweden Calling DXers is the world's oldest radio program for shortwave listeners. Radio Sweden has presented this round-up of radio news, features, and interviews on Tuesdays since 1948.

Radio Sweden broadcasts in English:

Europe and Africa:

15:00 hrs on 1179 khz (weekdays only)
16:15 hrs on 1179 and 6065 kHz
17:30 hrs on 1179, 6065, and 9645 kHz
20:30 hrs on 1179, 6065 and 9655 kHz
21:30 hrs on 1179 and 6065 khz, and
22:30 hrs on 1179 and 6065 kHz

Middle East and East Africa:

15:00 hrs on 15190 kHz and
17:30 hrs on 15270 kHz

Asia and the Pacific:

12:30 hrs on 15240 and 21500 kHz
22:30 hrs on 11910 kHz and
01:00 hrs on 9695 and 11820 kHz

North America:

15:00 hrs on 15240 and 21500 kHz and
02:00 hrs on 9695 and 11705 kHz

South America:

00:00 hrs on 9695 kHz

The broadcasts at 12:30, 16:15, 17:30, 20:30 (weekends only), 21:30, and 22:30 hrs are also relayed to Europe by satellite:

Astra 1B (19.2 degrees East) transponder 26 (Sky Movies Gold/TV Asia/Adult Channel) at 11.597 GHz, audio subcarrier at 7.74 MHz,

Tele-X (5 degrees East) (TV4 transponder) at 12.207 GHz, audio subcarrier 7.38 MHz.

Contributions can be sent to DX Editor George Wood by fax to +1-707-468-1460, via Internet to 70247.3516@compuserve.com, or by MCI Mail or CompuServe to the CompuServe mailbox 70247,3516.

Reports can also be sent to:

Radio Sweden
S-105 10 Stockholm
Sweden

Contributions should be NEWS about electronic media--from shortwave to satellites--and not loggings of information already available from sources such as the "World Radio TV Handbook". Clubs and DX publications may reprint material as long as MediaScan/Sweden Calling DXers and the original contributor are acknowledged, with the exception of items from BBC Monitoring, which are copyright.

We welcome comments and suggestions about the electronic edition, Sweden Calling DXers, and our programs in general.

Thanks to this week's contributors Good Listening!

> There's some pieces to this puzzle missing.

Yes, Jeff, your research into the matter does seem to be missing.

I have had a license for about three years now but I dated a guy years ago and while I wasn't interested at all in HR at the time, I got lots of exposure to it (far more than I wanted at the time :-).

I remember listening to the grumbles when the "incentive licensing" thing went through. It didn't make a lot of sense to me at the time, but I have never understood why priviliges would be taken away and if you worked real hard, you could get them back. Sounds like something that would come from an .edu site to me ;-).

The inspiration to get into HR myself came from a girlfriend who lives aboard a cruising sailboat and I remembered that the HR folks that I had met were all nice people and so I went for it.

Things HAVE changed. I was unable to find anything to do with HR as as an outsider at the time. One guy we knew went as far as to tell us about where to find the VE and he wasn't a ham. I had tracked down Super Morse and some exam testing software off of various BBSs. That I was interested in getting into ham radio seemed to inspire no one to write/call/send messages or to communicate in any way.

After we first went to Dayton for the "ripoff-vention" and purchased an Icom HT and came back (license arrived while we were gone to Dayton) I found a few repeaters and eventually found a ham club and even got an invite !

What a crude surprise. Mostly old men who sat around and talked about CW and keys and high power amplifiers and bitched about the sad state of ham radio. When attemping to get them into something that pertained to technology that had come along since 1930, all they could do was grouse about the sad state that the "hobby" had become and give endless reasons why things could not be done. They seemed to be unusually proficient at using a "kw" to talk to each other across town.

Eventually the newcomers quit coming back. I quit coming back after the first VE session that one of the few people "sticking with it" was giving before the meetings. The first time people came in for the codeless tech exam and passed it, they were treated horribly and thier efforts were equated with the lowest scum on the face of the earth. I was bluntly embarrased. These people were so clueless as to be "outraged" when we asked that they quit sending us the club newsletter, they just couldn't figure out why.

I've seen this more than a few times over the last couple of years. The only group I still belong to is a QRP group, most of them seem to be able to handle the changes that have occured and even find time to help new-comers by sharing and helping. Pretty sad showing for an area this thickly populated by hams. They have been quite an incentive for some of these new people to learn CW and upgrade.

I found my experience to be pretty close to Garys. There seem to be a large number of people that are arrogant and clueless and even hostile to another station joining the fraternity.

I do CW as I have come to enjoy the people I have met there. As a method of moving data, it makes as much sense as using flags or smoke signals. I did the 20 WPM thing before I had a clue :-) and if I had to do it again, I don't see any point to it beyond knowing it as a "last resort" mode (5 wpm is enough, IMO) as it does have value when the chips are really down, that has been too well documented to deny.

Why not encourage those that will populate the modes and bands of the future ? MF/HF was the default long-haul 50 years ago. Today it is being done via satellite links by everyone except hams (well, a select few do). HF is so crowded that it is almost useless and there is LOTS of room up above 30 MHz. With the feral competiveness of ham radio operators in general HF is also a mess in general. Yes, I am fully aware that there are good and helpful people out there as well, but somehow it seems that they are in the minority. The "bad guys" are just *so* obvious.

Another point of confusion (I read part 97) is the constant references to ham radio as a "Hobby". I never found that word in Part 97. We

get to experiment when we aren't needed but we are formally defined as the "Amateur Radio Service" by the FCC.

Jeff, after your last warm and friendy message to me, I have come to the conclusion that you just don't seem to have a connection to the real world. If you are at an .edu site, one would think that you would have a clue about doing research in these matters, but it appears that you work off of information you dreamed up in a vacuum.

In that "warm and friendly" message I was robustly criticized for not knowing the intricate details of mailing lists (when you didn't have ANY of the facts as to what was going on). It seems that this mode of operation is one that you are consistant in :-). At least in my case you seem to unaware that some sites and SAs are working sites that have to do so to keep the bread and butter coming in rather than have the luxury of having the bills paid by our taxes. The resultant luxury of getting to know every nuance of posting and reading to usenet comes a bit slower to those of us who can't do it full time.

Do some research on these matters before you exercise your great knowledge of how to write. Ham radio has some real problems that aren't going to go away by themselves, much less if they are swept under the carpet like they don't exist. First you have to admit there is a problem before you can deal with it. Alot of the newcomers are trying to understand and work with these and, I am proud to say, are a lot of the older folks who have been around for awhile.

Yes, we have our utterly clueless and ego locked members, but these are just very visible. The core of Amateur Radio are some of the best there are anywhere, but you do have to dig through those with "all the answers" to find them, they are rarely "important people". Once you do, its all worth it. Unfortunately, from what research I have done, it doesn't seem to include the arrl, which certainly seems to be a part of the problem rather than part of the solution.

2505. duplexer

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-20 14:22:59 UTC
From: darche@masi.ibp.fr
Message-ID: <27kec3$sj3@vishnu.jussieu.fr>
Source record: 276029

I'm desiging a wireless network for little mobile robots. It's a full-duplex communication. The name of my system is ActNet for robotic Actors Network.

Bibliography :
[Darche - Nowak 93] Ph. Darche, G. Nowak - "ActNet : A Heterogeneous Network of Actors for Learning of Parallelism, Communication and Synchronization"
- NATO Series F : Computer and Systems Sciences - Springer Verlag - Liege
- Novembre 1992 paru aussi en rapport de recherche MASI Nï¿½ 93-22
- Universie Pierre et Marie Curie - Paris.

I have to design a duplexer and I would like to know the way to specify this one (attenuation and duplex spacing in particulary) from the features of the emitter (emitting frequency coverage and emission power mainly) and of the receiver (sensitivity and receiving frequency coverage mainly).

Specifications of the transmitter :

- FM modulation,
- transmitter power Po = 1 Watts maximum
- transmitter frequency coverage fo = (40-45 Mhz) and (70-75Mhz),
- output impedance Zo = 50 ohms,

Specifications of the receiver :

- FM modulation,
- reception frequency fr = (40-45 Mhz) and (70-75Mhz),
- input impedance Zi = 50 ohms,
- reception IC : Motorola MC3362-3363.

Channel spacing : 50 Khz.

Could you help me ?

Thanks in advance and best regards.

>There's some pieces to this puzzle missing.

You don't understand the issue at all do you? The club long survived the presence of retired telegraphers and WWII intercept operators. They were just hams who happened to be good at Morse. The 60s were a turbulent period of social unrest, but we had managed to get most of that "checked at the door" before Incentive Licensing barged in. We had Goldwater Republicans and LBJ liberals. We had two of the founding members of the local NAACP chapter, and we probably had a few others whose bed linen had eyeholes. Drugs, sex, and rock and roll couldn't break us. But when the government validated the high speed Morse operators as somehow "better" than the rest of us, and implemented that by taking away from the rest of us non-CW privledges that we had enjoyed, that we couldn't check at the door. Our sense of shared community was permanently broken.

Hooray for my Standard C168A once again. It has a metal loop for the wrist strap to fasten to. This loop is fastened securely to the radios internal framework and protrudes through through a slot in the radios case. Just one more feature that made it the winner on my list.

Excuse me, but this is a different matter. All new batteries
need several "charge-discharge" cycles to reach their full capacity.

BTW, several weeks ago there were three or four posting from zrepachol@
cc.curtin.edu.au, in rec.photo, dealing with the care and feeding of nicd's.
If the author, or anyone out there that has kept them, can repost them, we
are going to appreciate it very much.

>(or more accommodating) repeater.

As I said in the part of my post you deleted, North Link, in particular,
IS used for public service - Skywarn, emergency communications at the
Grand Canyon, forest fires, etc. The first linked repeater on the system
was set up to help with Hands Across America communications.

I don't think that a repeater owner should be any more required to help
a group find another machine. After all, being a repeater owner doesn't
give him some special insight into repeaters in general.

Furthermore, I don't think most neighborhood watch groups even need a
repeater. Just how big IS a neighborhood, anyway?

I mentioned SVECS as a cooperative amateur association as an existance proof that it can happen with a group directly tied to ARES. Further, I would contend that such a cooperative group who's real unique feature is a membership from a wide geographic area would more easily adopt/adapt to new systems. Let's suppose that after another couple years we start seeing trunking systems retired from general service and appearing at swap meets. A group like SVECS would have the organizational setup to implement this "newer" technology more easily than some other groups mostly because of the lack of political in-fighting. Granted "trunking systems" aren't the latest thing in communications, but they would be new to amateurs and certainly make a better use of our existing spectrum.

> got chased off the North Fulton machine as a place to conduct
> their drills, though they're still welcome for real operations.
> That's a personality problem with the ARES leaders pure and simple.

Doesn't it really resolve down to this? If you put someone in charge that is going to build a little empire for themselves then they are almost setting themselves up for a falling out someplace with someone. Worse yet is when it is with the served agency. Such individuals suffer from NIH usually and that is just exactly what you DON'T present to a served agency.

My whole contention is that what may exist locally for you guys doesn't necessarily exist through out the US, and further, that for the most part it doesn't exist here as proof of the claim.

> systems in place to use it effectively.

Here is a real difference. The above systems are PERMANENTLY in place.
Two of the three systems I'm thinking of are ALWAYS on. The Condor
system which is pretty well known in CA was probably the first
way the amateurs in LA, et al, new what really happened in SF during
the Loma Prietta quake. We have been known to lash together things
for wide area conferencing capabilities, or creating linked bridges
for the duration of emergencies also. Two examples. During Loma
Prietta, a 450 lash up was created to tie the Bay area to Sacramento.
A couple high level machines where placed into service to reach
over the hills that separate the Bay area from the central valley.
Another time we had a group of people dispatched from here to
a point about 150 miles up the coast where a pretty major firre
was going on. A system of 450 machines was temporarily put together
to provide logistics service between the fire area and Santa Clara.
All of the above was very adhoc as oppossed to the permanent systems.
The differences here had mostly to due with geography. The permanent
systems are setup to link the metro areas, and the main highways
along the coast. The alternate bridging for the fire for instance
was needed because of both the distance and the mountains in-between.
Oddly enough notice all of the above was done on UHF instead of
resorting to 40m ;-)

Gary... I live in a valley within a state full of REAL mountains ;-)

My simplest answer to that is...the guys who installed the commercials system here are pretty much all hams. So within our reserve of personel such things exist. Now the simple practical problem is that if the world falls apart. These few individuals aren't going to be working for ARES they are going to be trying to put the several commercial systems backup. Here is a point of both advantage and disadvantage. We loose the experience of these few people, yet they are spread across many clients where each of our repeaters (and we have better than a hundred locally I'd wager) have individual teams who are only responsible for that one system that they built. We can get more back on the air quicker than the commercial guys simply because of the numbers. But to answer your question more properly, I can think of 2 guys within my city group of 12 amateurs that could do what you are asking. So yes, I'd say we could interface to the professional hardware REAL quick. In my city it would be real easy too since the ARES repeater is about 2 inches from the city gear.

> We don't have that here. Most ARES members haven't even heard
> of the ICS,

As for ICS...it was invented in CA...most of the ARES management have had full ICS training(short of being qualified PIO's). We don't always use it internally but the real trick is to be able to fit into a system employing it and being familiar with their lexicon of terms, etc. I'd say we've probably accomplished at least this level of integration with our served agencies.

> much less know how to operate under it. Monitoring
> real situations, I frequently hear, "CALLSIGN DE Callsign I'm

> here, what do I do now? CALLSIGN DE Callsign." " Callsign DE CALLSIGN
> Well I don't know. I'll see if I can find somebody to tell me
> what they want. Callsign DE CALLSIGN." "Hey! It's raining over here,
> anybody bring a raincoat?" "CALLSIGN THIS IS CALLSIGN THE OFFICIAL
> ARES CONTROL STATION. STOP MAKING UNIDENTIFIED TRANSMISSIONS.
> CALLSIGN." "Hey Joe, I got a spare raincoat. Where you at?" "CALLSIGN
> CEASE TRANSMISSION CALLSIGN." And so on ad infinitum.

The above happens here too.... but you'll also here a fair number
of people correctly using tactical call signs. A matter of
how much training is out there...answer...never enough :-(

> >Gary, I wouldn't argue the above. It seems that this mostly

> >Any suggestions?
>
> If I knew how, I'd be out doing it instead of here typing. :-(
> Getting cooperation *before* the emergency is the hardest
> job a ham can have.
>
> Gary

It all does come down to how much cooperation is out there. You
know the simplest arguement I found when two people are bickering
with each other... You two guys are both trying to achieve the
same thing...and are both doing it out of the best intentions. Once
they realize that they usually become a bit more coopeative...

That is about the only trick I've learned but....

Dits, Dahs, Bips, Beeps, to write it down or not to write it down.
Ah the challenge of CW, this is why I like it so much.

There is simply no _ONLY_ONE_WAY_ to do it.

I remember a ham-fest many years ago where an old-timer was banging out so CW with an old Vibroplex Bug. A youngster asked him why he used morse code and the old-timer replyed "Do you know what I'm sending?". To which the youngster answered "no". The old-timer responded "Well thats one reason". I quickly learned cw after that.

2514. CEPT license?

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-20 16:38:15 UTC
From: tlanders@adcmail.atlas.com
Message-ID: <1993Sep20.163815.26681@atlas.com>
Source record: 276044

Hi all. I haven't been on the net much lately, but I have a
question for the European hams out there.

I am an American who moved to Germany 8 months ago. I applied
for and received a German ham license. I'm now DG5KAA (on 2-meter
for those in the Koeln/Bonn area). Unfortunately, very little
information about my license came with it. I am more or less
familiar with German operational procedures (expecially after
only *listening* for 8 months), but I have a more general question.
Is my license a "CEPT" license. Can I use it all over Europe?
If so, which countries can I use it in?

I would ask the ARRL, but when I asked for everything they had
on foreign licenses, they only sent my the temporary license stuff.
Any help is appreciated (answers in English or German please).
Thanks.

2516. MOTO Radius P50 info wanted

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-20 17:08:50 UTC
From: kurdzo@gdc.COM
Message-ID: <3680@esun179.gdc.com>
Source record: 276045

I just bought a MOTOROLA Radius P50 at a hamfest. It is set up for
transmit on 469.525 or 464.525 (switchable) and receive on 464.525 only.
I have a few questions:

1. What is it worth? (I think I got a good deal.)
2. Can I simply get new crystals for 70 cm or do I have to
re-align the radio?
3. How much power does this radio put out?
4. Can I get an adapter to hook up a BNC for the antenna?
5. The DIP switches seem to set the PL. Do they do anything
else? Anyone have a table for the switch settings?
6. Currently there is only 1 crystal for receive, yet both channels
seem to share that crystal. Do I have to cut any jumpers
to have 2 independent receive frequencies?

Any help at all would be greatly appreciated!!!

I just use the wrist strap for what it surely is intended: as a "safety net"
in case I let go my grip on the radio itself.

Right on! I was about to reply in a like manner to him but you beat me
to it and were a little more civilized than I would have been (but
then, everyone knows that:))

He seems to think that every repeater is put there for people to use how they see fit. As you said, in many cases, this isn't true. While emergency traffic should be handled by any repeater without complaint, the routine use, without asking the owners permission, would be intolerable and the system would eventually be shut off if they didn't leave when asked.

:
: --

I've seen where, repeater bunches very much do not want others on that are
not saying what they want to hear (In essence, thats all it is), and take
measures to insure it.

Well! It's quite clear that repeaters are to be avoided at all costs, for
any form of use except what the private ownership wants to hear coming thru
their private repeater.--on thier private frequency (The end result!)

I think it's time we have 2 mters /220/440 etc returned back to all simplex,
Then, there won't be these all-day-long-unused-freqs (don't dare use), and
there won't be any more problems about who uses which freq for what use.

It's disgusting that some private bunch ties up a freq for some seldom used
function, and takes measures to prevent others from using that freq.
--- ----- -------- -- ------- ------ ---- ----- ---- ----

NOW I see why people operate simplex on the inputs of repeaters!
===
But...thats another topic, probably still going on in ...policy

I still (for other reasons besides) think, that the watch group will have
better results using simplex; 1 to 4 freqs, and organise passing of info,
where ever needed (via air - via phone line - whatever) and rely only on
themselves and equipment in hand.
Then they won't suddenly get stranded.

Sence this is a small group (covering -- it looks like -- 1/2 sq mi.) then
it won't need to be as elaborate as I first suggested.
(I thought it was going to involve...oh say 1/2 of town, like they did
where I used to live)

By all means set up the watch group, but STAY AWAY from those repeaters!
They are nothing but trouble.

I strongly disagree with the last statement. Why should I (or anyone
else) be obligated to find you another repeater to use? Scout around
and find it on your own...and ASK the owner if your use would rub him
the wrong way (before you use it for that purpose unless it is an
emergency).

I've read the FAQ information on shortwave and AM/FM DXing, and they recommend the GE Superradio III. OK. I called the two recommended dealers and found out that Bennett Brothers discontinued carrying it in the 1992 book and the 800-number for Best Products is not right. My local Best does not stock it, nor does it show up as being in the entire DC/MD/No VA region. Any vendors in the DC area that anyone knows about?

Yup. Thanks be to some unknown person out there who collects this stuff, though, since in today's e-mail was a copy of the article I'd lost. Unfortunately, it somehow had *my* name attached as the originator of the message, so I don't know who to thank for sending it. In any event, here it is:

From General Electric's tech. note regarding memory (posted w/o permission, and any errors are my own):

"Among the many users of batteries in both the industrial and consumer sectors, the idea of a memory phenomenon in nickel-cadmium batteries has been widely misused and understood. The term 'memory' has become a catch-all 'buzzword' that is used to describe a raft of application problems, being most often confused with simple voltage depression.

To the well informed, however, 'memory' is a term applied to a specific phenomenon encountered VERY INFREQUENTLY [emphasis mine - RLM] in field applications. Specifically, the term 'memory' came from an aerospace nickel-cadmium application in which the cells were repeatedly discharged to 25% of available capacity (plus or minus 1%) by exacting computer control, then recharged to 100% capacity WITHOUT OVERCHARGE [emphasis in the original]. This long term, repetitive cycle regime, with no provisions for overcharge, resulted in a loss of capacity beyond the 25% discharge point. Hence the birth of a "memory" phenomenon, whereby nickel-cadmium batteries purportedly lose capacity if repeatedly discharged to a specific level of capacity.

The 'memory' phenomenon observed in this original aerospace application was eliminated by simply reprogramming the computer to allow for overcharging. [Note that no mention is made of adding an intentional *discharge* to clear the problem - RLM] In fact, 'memory' is always a completely reversible condition; even in those rare cases where 'memory' cannot be avoided, it can easily be erased. Unfortunately, the idea of memory-related loss of capacity has been with us since. Realistically, however, ' memory' cannot

exist if any one of the following conditions holds:

A. Batteries achieve full overcharge.
B. Discharge is not exactly the same each cycle - plus or minus 2-3%
C. Discharge is to less than 1.0 volt per cell.

Remember, the existence of any ONE of these conditions eliminates the possibility of 'memory'. GE has not verified true 'memory' in any field application with the single exception of the satellite application noted above. Lack of empirical evidence notwithstanding, 'memory' is still blamed regularly for poor battery performance that is caused by a number of simple, correctable application problems."

[End of quote from GE tech. note]

This note goes on to list the following as the most common causes of application problems wrongly attributed to 'memory':

1. Cutoff voltage too high - basically, since NiCds have such a flat voltage vs. discharge characteristic, using voltage sensing to determine when the battery is nearly empty can be tricky; an improper setting coupled with a slight voltage depression can cause many products to call a battery "dead" even when nearly the full capacity remains usable (albeit at a slightly reduced voltage).

2. High temperature conditions - NiCds suffer under high-temp conditions; such environments reduce both the charge that will be accepted by the cells when charging, and the voltage across the battery when charged (and the latter, of course, ties back into the above problem).

3. Voltage depression due to long-term overcharge - Self-explanatory. NiCds can drop 0.1-0.15 V/cell if exposed to a long-term (i.e., a period of months) overcharge. Such an overcharge is not unheard-of in consumer gear, esp. if the user gets in the habit of leaving the unit in a charger of simplistic design (but which was intended to provide enough current for a relatively rapid charge). As a precaution, I do NOT leave any of my NiCd gear on a charger longer than the recommended time UNLESS the charger is specifically designed for long-term "trickle charging", and explictly identified as such by the manufacturer.

4. There are a number of other possible causes listed in a "miscellaneous" category; these include -

- Operation below 0 deg. C
- High discharge rates (above 5C) in a battery not specifically designed for such use
- Inadequate charging time or a defective charger
- One or more defective or worn-out cells (NiCds DO have a finite life; they won't keep charging and discharging FOREVER no matter how well we baby them.)

To close with one more quote from the GE note:

"To recap, we can say that true 'memory' is exceedingly rare. When we see poor battery performance attributed to 'memory', it is almost always certain to be a correctable application problem. Of the...problems noted above, Voltage Depression is the one most often mistaken for 'memory'.....

This information should dispel many of the myths that exaggerate the idea of a 'memory' phenomenon."

And THAT is the last I'm gonna say on the subject for quite a while! :-)

This sounds to me like an FAA beacon. The letters indicate its location,
probably part of the name of the town. Our local beacon is CAT for
Chatham. The pilots on this net can provide more info. The actual frequency
is below AM band but your set is being overloaded.
Minor corrections invited.

>Marc Holdwick, N8KWX

Restrictive covenenats get their power from basic contract law. You bought the house with those covenants attached by the initial developer to the property. The fact that they are not readily apparent in a contract of sale (i.e. they are recorded as attachments to all the deeds in some filing at the local or county level) doesn't invalidate their impact, as too many folks can readily attest to. It is strictly a matter of civil law.

As to all or most new developments being built with such covenenats, that may be true in some places, but certainly not all. To enforce such covenants usually requires an active homeowners association and that isn't always the goal of all developers. Here in the northeast, I'd say most single family dwellings (not townhouses, etc.) are built and sold without such covenants, and even if such covenants exist, few areas have any ongoing "homeowners association" to actively monitor and thus enforce such restrictions.

2533. Re: Where-O-Where to get the Superradio in DC?

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-20 21:17:27 UTC
From: rats@cbnewsc.cb.att.com
Message-ID: <CDo8H8.DGF@cbnewsc.cb.att.com>
Source record: 276053

In <9309201431.AA46365@steel.nist.gov> Tim Foecke states:

|I've read the FAQ information on shortwave and AM/FM DXing, and they
|recommend the GE Superradio III. OK. I called the two recommended
|dealers and found out that Bennett Brothers discontinued carrying it
|in the 1992 book and the 800-number for Best Products is not right.
|My local Best does not stock it, nor does it show up as being in the
|entire DC/MD/No VA region. Any vendors in the DC area that anyone
|knows about?

Presumably, you used the order number that appeared:

|It costs between thirty and sixty dollars in the US, and may be found at
|many discount outlets. It can be obtained from Bennett Brothers (Order
|#R8883) at 1-800-621-2626 or 1-800-631-3838, or from Best Products
|(Order # 140457) at 1-800-950-2398.

The order number R8883 was for the GE Superadio II. The Superadio II
was superceded by the Superadio III (Model 7-2887), and does appear in
the 1993 Bennett Brothers catalog. Order number for the III is R3116,
cost is $36.88.

Apparently when the FAQ was updated to include the Super III, someone
forgot to upgrade the Bennett Brothers stock number.

I thought it was a sea shell, or two for stereo.

No, seriously, an old method was to bias a 1N23 'radar diode'
with a small 6-volt battery and a resistor. Couple the circuit to
your AUX with a small capacitor. The diode was a 1/4" x 3/4" ceramic
and gold doo-dad. Try that Didi-Key everone else talks about. You
might find a '60s era Radio Amateurs Handbook in the local library
that would delve into more detail. As a kid, I remeber generating
white noise into a set of earphones for the same purpose. Mine
didn't work too well. I couldn't get to sleep with the 'phones
on.

>this? How well does it work?

I have 2 htx202's and an htx404. The ICOM packs lock on quite well. Some of
the OEM packs do not and wiggle a little.

I routinely use mine with ICOM Bp-8 packs.

I have one complaint about the HTX-202. It does not have any current
limiting via the battery pack. Using a 13.2 volt battery it behaves
strangely. On some frequencies it locks up with an "ERR 2" message. On
others it works fine producing almost 10 watts out.

Looking at the schematic, there is current regulation on the external
power input, but not on the battery connector.

The HTX-404 does not have this problem. On high power it puts out a little
over 4 watts with the same battery.

I caught the tail end of a QSO the other day about some additional modifications available for this radio. (above and beyond the infamous Jumper 13).

From the QSO I heard, the receive can be extended upwards to 530 Mhz - a full 30 Mhz past the old 500 Mhz limit. Also, some low-band receive is possible, down to around 43 Mhz.

Anyone have any more info on this ?

>they fail rather than entire packs...

When I had my Yeasu FT-23, I had (and still have) an alkaline pack for 6
AAAs, and I bought another 2 for 6 AAs. I put all NiCds in them, and at
7.2V, it's pretty standard to me, although I'd like a bit higher. (Actually
some of my friends modified the case to fit lots of 1/2 A and make it 12V,
but not easily removable.) Anyway, at 7.2V, it's equivalent to most standard
packs out there. And one of my reasons (besides PRICE) is the same as yours
on your last lines.

CONTEST COMMENTS 1993
======================
Announcing Plaque winners for the ANARTS WW RTTY CONTEST held
in June 1993.

Classification.

(A) Single Operator (One Xmitter) : VK2KM (Karl)

Score : 4,487,616 Points.

(B) Multi Operator (One Xmitter) : VK2RT (Bruce)
with Second Operator Benjamin Beresford, Chris VK2BYI,
Ian VK2IE.
Score : 4,836,000 Points.

(C) SWL : ONL383 (Jean-Jacques)

Score : 639,480 Points.

Congratulations to all these winners, they performed magnificently.

Certificate Winners for first, second and third places in Countries
and appropriate Call Areas will be announced in due course. Probably
in conjunction with the despatch of result sheets to all contestants.

Some comments made in the logs make interesting reading and a few are
shown below:

JA3DLE/1 Band conditions bad year by year, but enjoyed
contest very much every time. I really want more VK partici-

pants.......SM6BSK It is a very friendly contest.......ONL383
73 QRO to all HAMS and SWLs in VK.......BT2000BJ Am
probably the first China station in ANARTS
contest.......W9FFQ had fun. It was a great contest but
conditions were very poor.......G4SKA weather wet and windy,
open wire feeder broke Saturday, fixed on Sunday in rain,
Sunday evening the centre link broke and it fell down. Never
mind, there is always next year...

And for some statistics on the participation:-
1992 1993 Increase.
==== ==== =====
Competition Logs Received 29 47 62%
QSOs Recorded 2225 5115 130%
Approx QSO Pts Scored 13 million 29 million 123%
Average QSOs per log 77 109 42%

Some of the increases recorded would be due to the unfort-
unate change of date last year which was due to overseas
generated publicity, but nevertheless it is very heartening to
see the build-up.

The data needed to give an accurate participation figure
world-wide is not available, however we can make certain
statements;

1. It has been proved that the minimum number of
participants (i.e. stations who exchanged messages in contest
format) would have been 302.

2. It can be demonstrated that most probably the number
of participants would have been about 450 stations.

3. It is possible that as many as 600 stations participated

Regarding 3., an unknown factor affecting this figure
is, for instance, that in the USA many stations use contest
events as a means of building up contacts for Awards such as
WAS or WAC, and many just enjoy the flurry of contest
operation as a short term relaxation. To extract the sort of
data required to give projections of that activity is
just too time consuming, so we needs must be satisfied with
what we have.

One last figure, in 1992 we had 5 VK logs submitted (one was a
W3/VK). This year we had 6 VK logs of which 2 won
their classifications. Only one of the 1992 entrants fronted
up again in 1993. However, it has been established
that at least 12 VKs participated this year and
observation has shown some additional interest. Are these
figures good enough, and/or can we assume some increase in
activity because obviously new blood is moving into the
contest arena....food for thought.

de VK2BQS (Jim) ANARTS Contest Manager

CQ/RTTY Journal WW RTTY Contest September 25-26 (cont.)

Modes: Contacts may be made using Baudot (RTTY), ASCII, Amtor (FEC and ARQ), and Packet. (No unattended operation or contacts through gateways or digipeaters.)

Valid contacts: A given station may be contacted only once per band, reagrdless of the digital mode employed. Additional contacts are allowed with the same station on each of the other bands.

Exchange: Stations within the 48 Continental United States and the 13 Canadian areas must transmit RST + State or VE area + CQ Zone number. All other stations must transmit RST + CQ Zone number.

Countries: The ARRL and WAE DX Country lists will be used. NOTE: USA states and Canada areas also count as country multipliers. Example: The first US State and Canadian area you work not only counts as a multiplier for the state or area but will also count as a country multiplier for each band.

More next week

A great contest. Be in it.

IPS weekly report
---
10 September - 16 September 1993

Issue no.: 38

Date of issue: 17 September 1993

Date 10 11 12 13 14 15 16
10cm 79 79 79 80 82 85 88
A 04 06 13 61 29 18 (05 estimated)
T 38 37 34 20 14 30 30

Summary of activity

Solar activity was very low 10th-15th September, and low on 16th.

The geomagnetic field at Learmonth (WA) was quiet 10th-12th, except for a short unsettled period on 11th. From 1200 UT on 12th, the field was at unsettled to minor storm levels, increasing to active to major storm levels on 13th, and active to minor storm levels on 14th until 1800 UT when the field returned to quiet to unsettled conditions until the end of the period.
Ionospheric F2 critical frequencies at Sydney were mostly depressed by up to 10-40 per cent with a low of 60 percent

below monthly predicted values on 14th. Severe spread F was observed 1100-1300 UT on 13th, and there was sporadic E blanketing at 1900 UT on 14th September.

Comment:

Significant coronal hole sourced disturbance observed 13th and 14th. HF communications were significantly degraded during this period. During the period September 11-14, no sunspots were observed on the solar surface - the first time this situation has occurred on this side of solar maximum. Periods of no sunspots like this indicate that solar minimum is likely within three years.

Forecast for the next week (17 - 23 September)

Solar : Low.

Geomagnetic: Mostly quiet, possible mild recurrent disturbance September 23 (active levels).

Ionospheric: Generally good HF conditions for coming week. Slight degradations possible on September 23-24.

2545. How to find the answers to frequently-asked questions about Ham Radio

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-21 09:44:03 UTC
From: ikluft@uts.amdahl.com
Message-ID: <ham-faq-ptr-1-748604642@uts.amdahl.com>
Source record: 275945
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Posted-By: auto-faq 2.4
Archive-name: ham-faq-ptr

How to find the Rec.radio.amateur.misc Frequently Asked Questions list
---

This article will tell you how to find the answers to frequently-asked Questions (FAQ) from rec.radio.amateur.misc. The FAQ articles are posted on the 7th of each month. This article is posted on the 14th, 21st, and 28th of every month as a reminder of where to find the FAQ.

The FAQ articles are intended to summarize some common questions on the rec.radio.amateur.misc newsgroup and Info-Hams mail list as well as to help beginners get started.

Besides the monthly posting, the FAQ is always available via anonymous FTP and from e-mail servers. This article contains instructions for obtaining a copy of the FAQ. It also contains the table of contents from the FAQ so that you know which questions are covered by it.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good signal-to-noise ratio in the newsgroup. However, they can't do it alone - you, the reader, have to use them. If you are a new user, please print and review the FAQ articles and look at the instructions in the news.newusers newsgroup before posting any articles. If you are an experienced user, please help by refraining from answering frequently-asked questions on the newsgroup if they are already answered by the FAQ articles. Instead, send e-mail to the user who asked the question. (It will be helpful if you include the part of the FAQ that answers their question, but not the whole thing.)

--How to obtain a current copy of the FAQ---

There are 3 ways to obtain a copy of the FAQ.
1) NetNews
2) Anonymous FTP
3) An Electronic Mail Server

Option #1: NetNews

If you are familiar enough with NetNews to look through previous articles on your system, Option #1 above may be the easiest for you. The FAQ is posted so that it should not expire from your site's news spool until the next one is posted. Unfortunately, some news administrators do not honor the expiration dates meant to preserve the FAQ.

Look in rec.radio.amateur.misc, rec.radio.info, rec.answers, or news.answers.
If the FAQ has expired at your site, try Option #2 (and ask your news
administrator to honor expiration dates for articles cross-posted to
news.answers if he/she can.)

Option #2: Anonymous FTP

Anonymous FTP uses the File Transfer Protocol. It is only available to sites
which are directly connected to the Internet. If you don't know how to use
FTP and can't find a friend to help you, continue to Option #3. If your site
is not connected to the Internet, you should also continue to Option #3.

The following sites have copies of the FAQ:
site name & address path to FAQ articles
------------------- --------------------
ftp.amdahl.com pub/radio/amateur/faq.[1-3].Z
located in western USA, FAQ updated daily
ftp.cs.buffalo.edu pub/ham-radio/faq_ham_[1-3]
located in eastern USA, FAQ updated monthly
rtfm.mit.edu pub/usenet/news.answers/radio/ham-radio/faq/part*
located in eastern USA, FAQ updated monthly
contains news.answers archive - most UseNet FAQs are here
grivel.une.edu.au pub/ham-radio/buffalo/ham-radio/faq_ham_[1-3]
located in Australia, FAQ updated monthly
(Ham files mirrored from buffalo/funet/ucsd daily)
nic.funet.fi pub/ham/info/faq_ham_[1-3]
located in Finland, FAQ updated monthly

Remember, when connecting to the remote system, use the login name of
"anonymous" and, as a courtesy to the site administrators, your e-mail address
for the password.

Option #3: Electronic Mail Server

If you can't use Options 1 or 2, your only remaining option is electronic mail.
You can retreive a copy of the FAQ by sending a message to
mail-server@rtfm.mit.edu

The body of your mail will contain a command for the mail server software.
To get all of the FAQ (consisting of 70K of e-mail in 3 parts), place the
following in the first line of your message:
send usenet/news.answers/radio/ham-radio/faq/*

Leave out the subject of your message because the mail server will ignore it.

--- begin sample mail message ---
To: mail-server@rtfm.mit.edu
From: me@here.org
Date: Mon Aug 14 22:27:33 PDT 1995

send usenet/news.answers/radio/ham-radio/faq/*
--- end sample mail message ---

Table of Contents

Dates indicate last modification.

Part 1 - Introduction to the FAQ and Amateur Radio
** Table of Contents (6/93)
** Introduction to the FAQ (11/92)
* How to Contribute to the FAQ Articles (6/93)
* Acknowledgements (6/93)
* Notes on "Netiquette" (1/93)
** What is Amateur Radio? (11/92)
** Who can become a ham? (6/93)
** Where can I locate information and books on Amateur Radio? (9/93)
** How much does it cost? (9/92)
** Where can I take the tests? (9/93)
** What are the tests like? (6/93)
** What can I do with a ham radio license? (5/92)
** What can't I do with an Amateur Radio license? (pre-4/92)
** I'm interested, who will help me? (11/92)
** Should I build my own equipment or antenna? (11/92)

Part 2 - Amateur Radio Organizations, Services, and Information Sources
** Where can I find Ham Radio information with a computer? (11/92)
* The rec.radio.* newsgroups (6/93)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (new 9/93)
* The Internet File Transfer Protocol (FTP) (9/93)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (11/92)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (9/93)
* Lists of radio modifications and extensions (11/92)
** Can I send ARRL or W5YI electronic mail? (11/92)
** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (4/92)

Part 3 - Amateur Radio Advanced and Technical Questions
** What are the different US amateur classes and what can each of them do? (pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (new 9/93)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US? (9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another country or if I am a FCC licensed ham who wants to operate in another country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** Did you know that you can get college credit for being a ham? (pre-4/92)
** On what frequencies do JPL and GSFC retransmit the shuttle audio? (10/92)
** Can I take my HT on an airplane and operate it if I get the permission of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Submitting changes for the FAQ----------

If you have comments or updates for the FAQ, send e-mail to
hamradio-faq@amdahl.com
This will send mail to all the people on the FAQ editorial review group.

|> Restrictive covenenats get their power from basic contract law.

Something I could never understand about covenants: How can you ever get rid of one? Are you permenantly stuck with it for all time?

For example, let's say I discover that there is a covenant on my house that says once a year the owner must sacrifice a goat to the god Udog-Magamba, and furthermore, the house is 200 years old, and the convenant has apparently been there since it was built. What could I do to get rid of this?

Most contracts are bwtween two people, but in a covenant, who is the second party? Can anyone sue me if I violate a covenant, or must the covenant specify who the interested second parties are?

First: Thank you Bill for answering my questions! I appreciated your answers.

I have to disagree with the lack of enforcement issuse, however... It MAY not be a problem, but I would hate to be topping off my new 40 foot tower, when some neighbor "discovers" these "hidden" covanents and then sues me to tear it down...

The only safe way I can see, is if there are NO restrictions...

Thanks!

Does anyone out there remember seeing a posting about converting a NOVATEL cell phone to 902mhz amateur service? I remember a few years back seeing a posting from someone who worked a NOVATEL or maybe even a Novatel ham radio club describing a eprom that was availaible for this conversion. Does anyone have any information on this? 73 George

No, but chances are pretty good that repeater owners know who's running what repeaters, and which repeaters are getting little use. That's not necessarily a given, but IMHO any repeater operator who is interested in setting up a repeater for more than his/her ego would try to keep in touch with other local operators -- if for no other reason than to share info about sites/new equipment/lightning damage/etc. Is that an unreasonable assumption?

>Furthermore, I don't think most neighborhood watch groups even need a
>repeater. Just how big IS a neighborhood, anyway?

Depends on where you are. My "neighborhood" is in a mostly-rural area and covers several square miles. I'm sure you have such places in Arizona. :-) In a suburban setting, simplex or the dual-band approach I suggested in another post would suffice.... Which would most likely cover the majority of cases, so you make a good point.

The CSCE is the ONLY proof you have as a Technician that you have the
HF privaledges associated with passing the 5wpm CW test. Technical
speaking, even if you are in your car operation 10 mter mobile you
are supposed to have your FCC license AND the 5wpm CSCE with you.
The FCC says a photocopy is OK, so I would suggest you try to get
another CSCE from the folks that issued the one you had. Hopefully
they may have the records to be able to simply go back and check.

Your situation is a good example of the potential problem down the road
for a tech that hasn't upgraded for many years. If you lose the CSCE,
or if it is destroyed, you have no proof of your being licensed for HF
operation. That's good reason to consider having your CSCE laminated
to preserve it, or to make copies of the original CSCE and then keep
the original in a safe deposit box or some other place where the prospect
of it being lost or damaged is very slight.

>
>Curtis, WB6PUS

I think the Carl and Jerry stories were written by John T. Frye.
He also did the "Mac's Service Shop" in Radio and TV News.

Herb Brier was the conductor of the CQ "novice" column.

I recall lots of speculation about who wrote "Scratchi" about the time
it was discontinued. In one CQ editorial Wayne Green put up about
two paragraphs of "history" ending with:
....
Gentlemen, the author of Scratchi is:
(continued on page 129)

but of course there was no page 129 in that issue of CQ.

>negative half-cycles, and not having a lot of luck with it. (The 1/10 figure
>was taken from a short article in NASA Tech Briefs some years ago.)
>

Try half-wave rectified 60Hz. My trick is to place a 12-volt 0.06a
pilot-bulb in parallel with the diode when charging a bank of 4AH Nicads;
the bulb will permit a slight discharge between each charging pulse thru the
diode.
Some commercial circuits include a special controlled-discharge circuit, that
periodically takes a massive discharge current from the cells. Apparently
this is known as 'battery-burping', its purpose is to remove gas bubbles that
form on the plates of wet- or gel-electrolyte cells. If you want to experiment
with this, a suitable circuit could use a 555 as an astable, with a very
asymmetric duty-cycle (100:1) and a suitable relay & load-resistor to
shunt across the cell for brief periods.

I think the ARRL keeps a database on people who have passed element 1A and
thereby upgraded to Tech+. I believe W5YI does also, or perhaps contributes
to the ARRL database. A call or email to the ARRL might be worthwhile.

:Help !!!
:
:I did the exam today and I can't match up a few answers
:
:Can u pse help??
:
:Q 80. A moving coil meter responds to :-
:
: A. the peak value of the current passing through it.
: B. the RMS value of the current passing through it.
: C. the average value of the current passing through it.
: D. the square of the current passing through it.

C, the average value. This is pretty well documented wherever a book
talks about moving coil (e.g. D'Arsonval) meters.

:(It doesnt say AMMETER but the answers talk about current. Have they forgotten
:something?

It's the current through the coil windings that produces the electromagnetic
field that forces the needle (attached to the coil) to move around a permanent
magnet. A voltmeter is actually an ammeter that measures the current through
a known resistance (at least in the moving-coil instance; digital types
actually do measure voltage, and measure current by measuring the voltage
drop across a known resistance).

:Q71. The reactance of a 0.1mH inductor at a frequency of 3.5MHz is approx :-
:
: A. 2.199 ohms
: B. 2 199 ohms
: C. 219 900 ohms
: D. 2 199 000 ohms

Reactance of an inductor is 2*pi*F*L. 6.28 * 3,500,000 * 0.0001 = 2,199
and change.

:(Notice they used a space instead of a ,)

Unfortunate, confusing, but in the most technical of interpretations not
illegal. Since they chose not to use commas, it's less confusing to the eye
than "2199000".

:Q21 An in-line AWR meter operates by sensing:-
:
: A. the characteristic impedance of the line.
: B. the transmitter output impedance

: C. the line voltage and the line current
: D. the square of the line current

Presumably that's a typo and you mean "SWR".
Eliminate A right away; with a 50-ohm transmitter and 50-ohm coax and a
300-ohm antenna, measuring only the line would show a 1:1 SWR while the
actual SWR seen at the transmitter is more like 6:1 (assuming lossless coax,
etc.). B is sort of a given when you buy the transmitter, and also doesn't
allow for the coax or antenna, both of which still affect SWR.
Consider that SWR =

VO + VR

VO - VR

where VO is transmitter output voltage and VR is reflected voltage. Then
answer D would suggest you're measuring I^2*R, which is power; SWR is a
voltage measurement, as shown above. This leaves answer C, but the current
part confuses me; I can only assume that they mean you're measuring the
line current to produce a voltage (most bridges I've seen use an inductance
coupled with the line; current through the line induces a current in the
coupled inductance, which causes a voltage to be induced across the coupled
inductance, and you then measure the voltage).

The Radio Shack 2-meter handheld has a nifty feature. After purchasing a used one with a weak NI-CAD pack, I pushed 'talk' when the battery was a little too low...

The LCD display went entirely blank. "Aha," I thought, "the pack is totally dead." Not so... The control microprocessor must have been confused, since the radio continued to transmit, even after the push-to-talk button was released!!! Good thing it wasn't connected to the 8-element quagi antenna on the roof.

I can reliably reproduce this on my HTX-202. Anybody else have this happen? Are there other handheld-transceivers that get real flakey on a low battery?

2558. Re: Emergency: cellular vs ham (was Re: Yagi for Cellular Phone?)

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-21 16:23:49 UTC
From: edmitch@microsoft.com
Message-ID: <1993Sep21.162349.5770@microsoft.com>
Source record: 275899

Ham radio emergency communications remains essential in rural America. I just moved from Kittitas County (pop 27,000) in Eastern WA. Search and Rescue efforts (all volunteer) rely on ham radio communications and some simplex work on 155.160. Even the Undersheriff saw the value of ham radio such that he became licensed last year. And he carries County Sheriff radio equipment and a cel phone!

In rural and semi-rural areas just outside the big cities, the community relies on itself to cope with minor disasters (school bus crash) or big disasters (floods, storms, quakes).

Locally, now that I've moved to Western WA near Seattle, ham radio still provides essential communications and support to search & rescue. Approximately once per week an ELT or EPIRB activates on 121.5. Who do you think goes out and searches for these transmitters? Its hams who are members of ARES (actually they are operating as RACES but everybody calls themselves ARES around here), and groups such as the 4x4 Rescue Council which coincidently area also all hams. Look at any one of the S&R groups, ESAR, search dogs, mountain rescue, etc, here and you'll find that >50% are hams.

The second point I'd like to make is one that I made in my October 1988 QST article, "Emergency Communications: Is it Legal?" - merely talking into a radio is not that valuable to anyone anymore. Its the set of skills you bring with that radio that will provide help. For example, at a forest fire, I helped repair a teletype circuit used by the on-scene National Weather Service forecaster. I'm also certified as a First Responder in the State of WA (this is the advanced first aid training that all firefighters have at a minimum and qualifies me to work on a Basic Life Support ambulance in this state). Even knowing how to communicate between points A and B maybe a useful skill. When I lived in CA I directed communications for the Seqouia Century 100/125 mile bike tour across three counties. No one had ever tried to link this area together prior to our comm support for this bike tour. One week after the first year we did this, a 6+ earthquake hit the area. It was nice to be prepared and to provide a comm link that no one else had.

So to summarize, even when you live in a tax-rich, professionally covered, emergency management area, there are probably roles for you to play - even if it is just being the first one on scene at an injury vehicle accident. The important point is to cross train and be skilled at more than just talking into a radio. There are many opportunities - learn radio repair; learn to be a leader and to remain calm in an emergency; learn advanced first aid or better; work with your emergency mgmt planners - give them feedback on their emergency mgmt plans; learn to help manage their resources (e.g. their comm van - as "just an ARES ham" I've been asked to answer incoming 911 calls and dispatch police and fire because of an emergency where the County ran short handed).

Go for it!

Here we go again.....

In the October 1993 issue of '73 Amateur Radio Today' on page 8,
there is an announcement that Rayovac Corporation has a new and
improved alkaline cell that is rechargable.

The product is named 'Renewal' and boasts 3 times the life of a NiCd
when new, however, the cycle-hours decrease to about the same as a NiCd
after about 25 charges. This new battery can also hold a charge for
5 years and is not supposed to show any of the 'memory-effect' of NiCds.
(don't flame me for use of *that* term/phrase,
I'm just reporting what is says in the announcement :-))

'73' credits the announcement to the publication:

'Electronic Products, No. 3, August, 1993'

I do not know anything else about this product, nor have I seen it, or have
I seen an ad for it by Rayovac, either!

Hi,
Just upgraded last nite to Extra, and a question came up. I just received the QSL cards that I ordered when I got my tech+, 2 mos ago. I am changing my call. I guess I was foolish for ordering the cards when I did, but I just had to have em. Can I continue to use the cards after my new call arrives by noting the new call on the card in some way? Is this considered a valid QSL?

Also, what is the current turnaround rate for ARRL/FCC on license upgrades and call sige reissues? Based on the information in Sep QST, it looks like I may end up with a call in the AA3I? range. About right?

Thanks,
Joe (landisj@drager.com)

> enforce such restrictions.
>

This is exactly why neither the ARRL nor the FCC is interested in extending PRB-1 to address covenants - It simply isn't perceived as a problem in Newington or Washington. Just try finding a new home development built outside of the east coast in the last 10 years that doesn't ban outdoor antennas ! I believe Wayne Overbeck, N6NB did just such a study a few years ago in the LA area.

There are about 500,000 hams in the US now. When are we going to become a political force, capable of influencing these developers ?

2565. Ignition noise found

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-21 18:13:49 UTC
From: randolph@est.enet.dec.com
Message-ID: <CDps2r.H0K@ryn.mro4.dec.com>
Source record: 275940

Just spent a lunchtime sniffing out a source of crackly ignition noise in my car. Turned out to be the coil lead making poor contact at one end, and arcing over. This would have been obvious had I just pulled the lead and looked in, cuz it had that powdery greenish stuff, that forms around arcs, all over it.

What finally pinpointed it was a 2" dual-band stubby duck off of another ham's HT. It was the deafest antenna we had, and it pointed to the coil-distributor area. Any other antenna picked up the crackle from 20 feet away! I wonder how well my 50 ohm dummy load would work for this sort of thing?

n2ic@longs.att.com (N2IC/0) asks:

>>There are about 500,000 hams in the US now. When are we going to become
>>a political force, capable of influencing these developers ?

I suppose the answer is "when we represent a lot more than 1 house buyer in every 500". Well, it's not quite that bad; I don't know the number of people trying to buy a house at any one time, but I would bet that no more than 1% of them are hams who care about antenna restrictions. This is nothing like a "political force". Just as a matter of fact, what is the membership of something like the NRA? (not that we would want the ARRL to be as, well, as NRA-ish as the NRA is).

Subject: [HELP] Hams in Prague, anyone?

Greetings netters,
I hope this is the right place for this message. Pls let me
know otherwise and suggest to me where I can post this msg. Thanks!

I have an American friend in Prague who's a student at the Central
European Univ. who's looking at communicating to USA through ham radio
to save money. Do you know off hand if this is possible or permissible
(legal) in Prague at all? Are you a ham radio operator in Prague
or do you know of one who lives in Prague? If you are a ham, can
you possibly find this out? I'm not a ham so I don't know much
about ham radio at all. BTW, please let me know if you are a ham
living in the Bay Area (particularly Berkeley or Walnut Creek)
and who could help me in this matter.

Any help or pointer to my request is greatly appreciated.
Thanks sincerely,
Tivonne (tivonne@atwc.teradyne.com)

****
CQ CQ CQ DE NA4G
****

I had been looking for information relating to commercial radio operator
testing procedures, etc., and ran across the following recent tid-bit.

Since the FCC dropped official testing last year, and I kick myself for
missing that last exam opportunity, commercial tests have been unavailable.
Apparently, the FCC has given the go-ahead for private testing organizations
to give commercial radio exams. The information relating to this has not
been easy to find. Several phone calls to various FCC offices did not seem
to help much, either. Below is a snippet of info relating to one of the
organizations giving tests, that was passed my way recently.

In the hope that it may be of some interest to those unfortunate radio
freaks amongst us (like me (:+}}) who are wont to get a real radio license,
and are having one dickens of a time finding out just what is going on,
I am passing this along in case it may be of use.

Don't contact me for more info, contact these folks below. I am still
trying to find out what/where/whom, etc.

PRIVATIZED COMMERCIAL RADIO OPERATOR EXAMINATIONS NOW
AVAILABLE

Dallas, TX (Sept. 20, 1993) National Radio Examiners, the
commercial radio testing arm of The W5YI Group, Inc.,
announced today that they are ready to conduct FCC license
examinations for both the Marine Radio Operator Permit and
the General Radiotelephone Operator License. Up until this
year these exams were conducted by the Federal
Communications Commission. Eventually all commercial radio
examinations will be available in the private sector as the

FCC releases the question pools from which the examinations are constructed. The Marine Radio Operator Permit is needed to operate radiotelephone stations aboard certain large ships and vessels that carry passengers and boats that operate on medium or high frequencies. The permit is also required by certain aviation and coast radiotelephone stations.

The General Radiotelephone Operator License (GROL) is the most popular of all Commercial Radio licenses. It is required to adjust, maintain or internally repair transmitters in the aviation, maritime and inernational fixed public radio services. It also permits operation of high powered maritime radio stations and pleasure vessels operating at more than 1,000 watts. Many companies also require the GROL as an indication of technical proficiency in communications and electronics.

To obtain these licenses, an applicant must pass an examination on Radio Law (MROP) and additionally an electronics examination for the GROL. There are 24 multiple-choice questions on the MROP test, 100 on the General Radiotelephone Operator License examination. Passing score is 75% correct. All questions that might appear on these examinations were released by the Government during early September. There are nearly 900 questions in these question pools. All questions, and their multiple choices and answers are public information. Approximately 10% of these questions are chosen for the examination. Copies of the Element 1 and 3 question pools along with the FCC's (Part 13) Rules covering Commercial Radio Operators are available from National Radio Examiners. (Mailing address: P.O. Box 565206, Dallas, Texas 75356 Cost: $10.00 plus $2.95 shipping handling.)

The National Radio Examiners (Division: The W5YI Group) has established nearly 300 Testing Centers around the United States. Telephone: 817/461-6443 for the nearest location.

> only *listening* for 8 months), but I have a more general question.
> Is my license a "CEPT" license. Can I use it all over Europe?
> If so, which countries can I use it in?
>
I would think that if you have a full German licence (as opposed to a temporary reciprocal one) then it is probably valid for CEPT purposes. The UK licence validation document has CEPT stuff plastered all over it so there is no doubt about that. The list of countries on my licence is:

A B CH D DK E F FL GR H I IRL L MC N NL S SF TCH ZL (and presumably GB, which they *don't* list :-))

Unfortunately the list is based on 'official' country IDs instead of prefixes :-(

You need to know which class of CEPT licence you have - that might restrict what you can do with it. Note that the amateur bands in some European countries is not as big as others, and AFAIK we all only have 2MHz at 2M and 10MHz at 70cms max.

>Newington or Washington.

I spoke directly with Chris Imlay, N3AKD, the ARRL General Council, at HAMCOM last June. He addressed this very subject by saying that he and others are doing the research to substantiate the fact that more and more new home developments around the country have severely restrictive covenants against antennas. The ARRL IS, in fact, very concerned about this situation. Chris is working on the legal backgound footwork necessary to present this to the FCC. He believes that a case can be made to get PRB-1 substantially changed or rewritten to give it teeth to prevent or overcome these kinds of covenants.

Please note that I'm paraphrasing Chris' comments, but this is the gist.

Kris,
AA5UO

2573. HTs Airlines and Morris

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-21 20:01:53 UTC
From: jangus@skyld.tele.com
Message-ID: <748641713snx@skyld.tele.com>
Source record: 275956

It was only a matter of time before this happened.

I went up to the Rogue River in Oregon for a rafting trip last week.
The airline of choice was Morris Air Service as they had a cheap direct
flight from Los Angeles to Eugine Oregon. (Nice stop at Crater Lake on
the way to Galice.)

Among other things I took with me for my trip I packed the Kenwood TH-77A
in the carry on bag. Complete with the cheap trickle charge, ARRL "Repeater
Guide 93-94", extra BP-7 battery pack and a rolled up twinlead J-pole antenna.

Both at Los Angeles and at Eugine nobody said anything about the HT in my
carry-on bag. Must have looked VERY interesting though on the X-Ray machines.
The clips on the suspenders (binders for our English friends) set off the
metal detector and the security people did have to wave to wand to make sure
I wasn't carrying an Uzi or such disguised as buttons.

The Captain did come on the intercom and announce that "transmitting devices"
were not allowed to be energized while the plane was in the air due to FAA
regulations. (They did not cite which regulations in particular. Nor could
they after the flight when I specifically asked the Captain on leaving the
plane.)

Too bad really, I was kind of hoping that the questioned what the device in
the carry-on bag was and when learing that it was a Amateur Radio Service
device allow me to use it as long as I brought a Hand Key. Oh well.......

Well, I wish the ARRL would be a little more specific on what exactly is "reasonable accomodation". And I wish that the FCC would spend a little more time enforcing PRB-1 rather than make the common folks without the resources fund legal cases. Maybe if the FCC actually started taking some cities to court, and won big concessions, cities would start to wake up.

For example, in my town I wanted to put up a 55' crank-up tower. I live in an "R-1" zoned neighborhood (translated: NIMBY-city) which is composed of primarily single-family houses.

Well, the limit is 30' plus a 10' over allowance. In order to apply for a variance, I would have to:

1. Pay an "application" fee of $500, plus an "advertising" fee of $100.
2. Provide 10 copies of a 10-to-1 scale plot of all buildings, properties, district lines, zoning lines, etc., for everything within a 200' radius of my property lines.
3. Provide address labels for the owners (not occupants) of every piece of property shown on my plot.
4. Provide a certified "engineering study" of the structure I was going to erect, demonstrating its acceptable windload and falling perimeters. (this one was my favorite...)

On top of all this, I was informed that I should not even bother to apply if the structure would not entirely fall on my property should it collapse. Since I live on a 40x100' city lot, there is no way I can put something up which will fall within my property lines.

I figured out how much it was going to cost me (assuming I was granted my application and didn't have to 'appeal' at the rate of $500/appeal), the total "cost" for the engineering studies, land plots, legal fees, research, etc., was close to

$5,000

This, mind you, to erect an HDX-455, which you can buy from HRO for $1,289. And, that's with no guarentee. I could have shelled out the dough and received a flat "no".

Okay, so let's forget the varience, right? Let's just put up a 40'
structure instead? Easy, all you have to do is apply for the
permit, right? Wrong.

Zoning board still wants me to provide items #2 and #4 above,
along with my "application fee" of $100.

Basically the zoning ordinances are set up specifically to prohibit
you from setting up any type of amateur radio tower.

And spare me the "you should have checked before you moved there"
line. I wasn't a ham, nor had any intention of putting a 55'
tower in my backyard 5 years ago.

My answer: since the ARRL is "overwhelmed" by people seeking help
from people, each of whom "think there situation is the most important",
its clear I shouldn't expect any help from the ARRL. Sure, their
PRB-1 infopacket may be nice, but when I mentioned PRB-1 casually
in my conversations with the zoning folks, they said "doesn't
apply", and I don't have the dough to legally challenge them on their
interpretation.

Instead, I'll buy an R-7 and put it on the roof (which is technically
"illegal", since the antenna is 22.5' high and I can't have anything
10' over the peak of my roof...)

2576. Re: Antenna Covenants AGAIN (but now with a twist!)

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-21 20:42:10 UTC
From: elmore@rap.ucar.edu
Message-ID: <1993Sep21.204210.14162@ncar.ucar.edu>
Source record: 275948

While not covenants, Boulder County has added a new twist to
its restrictive antenna ordnance: antenna height must be measured from
the *LOWEST* point of the property. Thus, if your property changes
elevation by 35 feet or more, you may not put a 35 ft antenna anywhere
but at the lowest point and you may put no antenna at the highest
point.

Given the ruling made by the Tenth Circuit Court of Appeals
concerning Boulder's ordnance, the FCC needs to put a lot more teeth
into a re-written PRB-1. Also, given the current state of affairs, it
would be quite legal for Boulder county to have a zero allowed antenna
height, allowing antennas only by variance. And, all they need do is
point at a few examples of allowed antennas to show that they have not
prohibited amateur antenna installations. Boulder County has taken
the tack, supported by the Tenth Circuit, that all they need do under
PRB-1 is allow access to the process; access does *not* imply that
anyone and everyone may have an antenna. Rather, it only requires
that they hear the applicant out. Based on whatever their "finding of
fact" is, they can then deny the application with impunity.

PRB-1! Feh.

Note that I have redirected follow-ips to .policy.

I have been asked to document Amateur Radio activity in the upper UHF
and microwave bands. I would like to ask our newsgroup readers to
email me information about their equipment and activities on Amateur
frequencies starting with the 902 MHz band.

I would like few levels of responses:

1. A fast report on your equipment and activities. This can include
digital modes, satellite, ATV, etc.

2. Immediate comments about your thoughts on the use of these
frequencies, our future, the direction we are headed, the relative
importance of the different modes (no CW wars, PLEASE!). This can
include summaries of the things you are planning to do (or would
like to do) when you get around to it, or a soapbox of the
way you think things should be.

I will forward this information to several different people here on
staff, for long-term use in our work before the FCC. Out of 45K
readers, I should be able to get quite a few reports. Thanks to all
who respond.

2581. It took 72 days for my license

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-21 22:41:03 UTC
From: pachner@csd4.csd.uwm.edu
Message-ID: <27nvtvINN4gq@uwm.edu>

It took 72 days, but the license finally arrived. I took the test on July
10, so to all the people out there waiting, you have a frame reference now.

>Jeff NH6IL

I'm amazed that someone with an obviously very new callsign would question
Gary's account of what happened to his own club. for what it's worth,
his description varies only slightly with what happened to my old club,
the Cleveland (TN) Amateur Radio Club. Actually something similar happened
twice to this club. The first was with incentive licensing, when the
elder CW statesmen (NOT), holders of extra and advanced class licenses
cliqued together and ran off the rest of the hams. Unfortunately for
them, they were dumb as fireplugs about the club equipment so as the
equipment died, so did the club. In the late 70s we rebuilt the club
to some semblence of its former self when along came the VE program.
This was as bad as incentive licensing. Cleveland is the corporate
headquarters of the church of god of prophecy (COG-OPs as we call 'em.)
The COG-ops have in the past and presumably still do illegally use
amateur radio to conduct the business of their missionary activities.
I had the unfortunate occasion to live across the street from their
headquarters building and got to suffer the consequences of their
very high powered, very incompetently run HF station.

Anyway, when the VE program became reality, the COG-OPs saw this as the
opportunity to obtain licenses for a large number of their workers.
They qualified a couple of their people as VEs and then ran literally
hundreds of their people through the program. The cheating was rampant.
They were caught with smoking guns on a couple of occasions but no one

including the FCC seemed to care. I participated on one of the investigative ad-hoc committees. The guy was caught red-handed with his cheat sheets. I wrote a letter to the FCC separate from the committee's report. Nothing. Not a word.

This wave of non-hams invaded the club in order to gain access to the very fine club station we had assembled in the clubhouse we had financed and built. The club went overnight from over 300 members to under 100, and none of these 100 were old members. Again, as soon as the equipment quit working, so did the club. Last I heard, they'd managed to drop a tower across the guy lines for the police repeater, taking that tower down. The city is threatening to cancel the lease.

From: carndt@netcom.com
Message-ID: <carndtCDq7yo.Bwz@netcom.com>
Source record: 275968

I have some Motorola DARCOM 900 MHZ commercial gear that is on the point-multipoint MAS freqs at 928 and 952 MHZ. I'd like to try it out on the 900 MHZ amateur allocation. I have all the tech manuals.

The units are four freq synthesized units that use a 74S287 prom for the frequency setting. I have 3 different programmers, NONE of which will read or burn these proms (burn is the appropriate word, as these are fusible link devices :-))

Anyone have access to a burner that can do these chips, or suggest an alternate circuit that will replace them with more friendly devices?

Thanks for any help you can render.

73,

Chris

(I could order them from Motorola, but I hate to think of the charges and lead time that would entail.)

Lead-acid wet cells outgas hydrogen when charged. When overcharged,
they emit sulphuric acid fumes. The former is an explosion hazard,
and the latter is a corrosive agent.

I've used wet cells to power radios and UPS systems. If you keep
them in a well ventilated area in a wooden box, watch the charge
levels and rates carefully, and keep the water level up, they are
useful and fairly safe. Regular automotive batteries don't last
very long in this service though. It's better to use a marine or
deep cycle battery for long life.

Source record: 275962

Being a low power ham by both interest and necessity,
I was wondering if any current/previous owners of
the MFJ QRP rigs (Model 90xx, I believe) could give
me their opinions. I have a chance to get one at
what seems to be a reasonable price (~$170 US for
both the rig and matching power pack).

Is the filter any good? Clean signal? How's the
overall feel? Is the QSK as grand as the ads make
it sound?

I'll post a summary if I get alot of replies to
this. Thanks for the help.

Regards,

Joe Gervais jgervais@ucsd.edu

>the membership of something like the NRA? (not that we would want the
>ARRL to be as, well, as NRA-ish as the NRA is).

The NRA has 3,000,000+ members, and almost every one is politically
active. That's the secret, of course. They also represent 100,000,000
armed Americans. The NAB has a much smaller membership than amateurs,
something like 1,500, but those are corporations with the ability to
influence public opinion. The Farm Bureau has slightly less than 1,000,000
members, the AMA has a bit less than 250,000, but they get their way often
because they too are politically active.

Hams by and large aren't single issue voters, have little public voice
or public recognition, and don't spend much on lobbying, so they carry
little political clout. They also don't have the direct support of a
Constitutional amendment or the moral force of a 200 year tradition
of armed readiness that the NRA can command.

1968 was an important year for the NRA and for hams. It marked the turning
point from a hunting and fishing organization which sponsored marksmanship
training to an active political force defending a Constitutional right under
attack on one hand. On the other it marked a bunch of tired old men actively
seeking government Big Brother style over-regulation to protect an outdated
paradigm of communications.

2590. Re: Emergency: cellular vs ham (was Re: Yagi for Cellular Phone?)

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-22 01:18:16 UTC
From: mjr@netcom.com
Message-ID: <mjrCDqEAG.I2L@netcom.com>
Source record: 275965

I've been following this thread, and after Vikki's post I feel I have to add my $0.02 because these experiences can be so localized....

I've had my license about 15 months. I read the book, took my tests, and passed at the Tech+ level before I ever went looking for other HAMs. While waiting for my license, I listened to many of the repeaters around the SF Bay Area. I went to a few club meetings in a couple of counties and found a wide variety of people, men and women from the very old to the very young. The vast majority were encouraging and friendly. Some of the old timers grumbled about the no-code licenses, but the political attitude here (on the whole) is that HAMs are loosing spectrum in part because there aren't enough of us to form an effective lobbying group. If no-code is the way to swell the ranks to help prevent further loss of spectrum, so be it!

Since that time my experiences have been mostly positive. I have met people (young and old) who do almost nothing but CW, but I've never felt put down by any of them even when they know I've never even used the Novice privileges I have. My interest in HAM radio was for my own "emergency service" (on the road), to be of assistance to others, and because I've been a scanner hobbiest for a number of years and wanted, in some way, to participate, to talk back (so to speak)...

That brings me to emergency services... I agree, HAMs who are interested in such things should take classes (if they can find them), do public service (great spontaneous message passing practice), participate in drills, etc. This may not be so easy in many parts of the country, I don't know. We've got it good here in this part of the world. I've had ICS training from the Cal. Dept. of Forestry, learned how to operate the local Comm. van, participated in drills, etc. Professional emergency service agencies could meet us half way as well. Should HAMs learn the local 10-codes? Which ones? Sometimes different agencies even in the same jurisdiction use different codes... That is one of the fundamental principles of ICS... If you're going to plan for interagency operations, *USE PLAIN ENGLISH*, not codes!

Remember also that HAMs operating in emergency situations are not supposed to REPLACE professional emergency communications systems and personnel. We are, for the most part, supposed to operate in the rear eschalons passing the kind of traffic (H&W) that is otherwise a burden to the professional agencies, and this applies whether we are using 2M FM or 40M CW/SSB, etc. Those pieces of paper, while utterly superfluous in the opening hours of a big disaster become really handy for later verification and audit purposes. One such piece of paper saved a guy I know from a nasty law suit! Are we

therefore inferior because we operate in the rear? Is our service unworthy because we're not breathing fire?

Lastly a comment on technology itself... I've been involved in reporting three big highway accidents in the last 12 months. In each case I was not the eye witness, but thy guy who answered the radio and called 911 when the eye witness came on the air. In every case, a driver with a cellular phone had beaten us HAMs to the punch! Nothing wrong with that, the faster the report gets in, the better for every one concerned. OTOH, during the Oakland fire, three cell sites went down, so much for those guys. Portable satelite comm. rigs didn't work either, because there was so much soot in the air (carbon you know...) it absorbed the signals! The only thing left was old fashioned NFM!

So its really a mixed bag. Sometimes more modern technology is beating us to the punch, so what! HAMs are being excluded from effective service in more minor disasters OK, that's the way technology goes... I'd still like to be in a position to help in the event there isn't someone with a cell phone on location to make a report, or when the really big ones come along, and there aren't any other effective means of getting the word out. I'll do my best, OTOH, I have a life outside of radio. Emergency service isn't my profession. If I'm not as fully trained as I might be, its also up to the professionals to write their plans to make effective use (if possible) of us semi-trained, but willing helpers.

PRB-1 is a "finding" of government interest in radio communications.
It doesn't have quite the same force as a law. That would require
action by Congress.

>For example, in my town I wanted to put up a 55' crank-up tower. I live
>in an "R-1" zoned neighborhood (translated: NIMBY-city) which is composed of
>primarily single-family houses.
>
>Well, the limit is 30' plus a 10' over allowance. In order to apply for

> 2. Provide 10 copies of a 10-to-1 scale plot of all buildings,
> properties, district lines, zoning lines, etc., for everything
> within a 200' radius of my property lines.
> 3. Provide address labels for the owners (not occupants) of
> every piece of property shown on my plot.
> 4. Provide a certified "engineering study" of the structure I was
> going to erect, demonstrating its acceptable windload and
> falling perimeters. (this one was my favorite...)

This all sounds fairly reasonable. The fee is consistent with the
concept of "user fees" for special government services. The plat
requirements are normal zoning procedure, as is the notification
provision. The "engineering study" normally means a copy of the
Rohn data appended to a certification by an engineer that the
proposed installation is consistent with that data.

>On top of all this, I was informed that I should not even bother to
>apply if the structure would not entirely fall on my property should
>it collapse. Since I live on a 40x100' city lot, there is no way I can
>put something up which will fall within my property lines.

That is unreasonable. Since buildings can fall across property lines,
and you are required to get a PE to sign off on the installation
plans, this shouldn't be the case. It does make the zoning board's
job easier, but that's why you're paying them the $500.

>I figured out how much it was going to cost me (assuming I was
>granted my application and didn't have to 'appeal' at the rate
>of $500/appeal), the total "cost" for the engineering studies, land
>plots, legal fees, research, etc., was close to
>
> $5,000
>
>This, mind you, to erect an HDX-455, which you can buy from HRO for
>$1,289. And, that's with no guarentee. I could have shelled out the
>dough and received a flat "no".

Them's the breaks in a zoned community. Zoning is a two edged sword.
On one hand it protects you from having an all night body shop next
door. On the other it makes doing unusual things on your property
more difficult. And ham radio definitely is unusual.

>Okay, so let's forget the varience, right? Let's just put up a 40'
>structure instead? Easy, all you have to do is apply for the
>permit, right? Wrong.
>
>Zoning board still wants me to provide items #2 and #4 above,
>along with my "application fee" of $100.

That's not bad, standard zoning practice.

>Basically the zoning ordinances are set up specifically to prohibit
>you from setting up any type of amateur radio tower.

No, they're set up to control land usage. You're lucky that towers
are provided for at all on a narrow city lot.

>And spare me the "you should have checked before you moved there"
>line. I wasn't a ham, nor had any intention of putting a 55'
>tower in my backyard 5 years ago.

So move now. Interests change, and that may require relocating.
If you suddenly decided you wanted to raise chickens and goats,
you'd have to move. So don't be surprised that you have to find
a more suitable location to erect a large tower.

Well, I'm on the waiting list, but I don't expect to be on the air until sometime between Hallowe'en and Thanksgiving (US).

However, I just heard a very comforting rumor for the future testees, from a Very Reliable Source. Seems that starting in October, the FCC will begin testing of a program where the form 610s are electronically transmitted to them from the field (presumably the VEC), and that licenses should take only from 7 to 10 days!

John, you should know better than to try to judge how long a person has
been licensed by their callsign; your WD4 call doesn't sound too old!
I received my General class license in 1976 with the call WA6QIJ. When I moved
to Hawaii in '77, I hoped to get a KH6 callsign but the FCC gave me the call
WH6AEQ (yuck); the next time around they gave me my present call.

And concerning Gary's poor arguement in trying to associate the breakup
of his club with incentive licensing, I guess we should also blame Hurricane
Andrew on all those high speed Morse people - pumping all that code into
the atmosphere surely must have created the low pressure cell which bore
Andrew. In fact, let's blame everything bad in the world on high speed code
operators!

Jeff NH6IL [ex: WA6QIJ, WH6AEQ; in '66: WN6(I ain't gonna tell that one)]

2595. How to draw schematics...?

Source record: 275975

Well, I've finally finished my 25A power supply and got it all
tested and stuff...but now I need to commit the revisions of the
design to paper, lest I forget them. Is there a good program
available via FTP to draw out schematic diagrams and print them?
I tried briefly with a paint program, but soon discovered that this
was an exercise in futility.

Reply here or via email, I check both.

2596. Ramsey FX-440 kit information

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-22 07:02:30 UTC
From: mcgough@seq.uncwil.edu
Message-ID: <1993Sep22.070230.2388@seq.uncwil.edu>
Source record: 275976

Hello everyone,

I realize that the the subject of Ramsey kits has been hashed and rehashed in this newsgroup.

However, I'm wondering what successes/failures other hams have encountered with the Ramsey FX-440 (PC Board rev 1.4, 1/93). I've partially searched the mail archives at ucsd.edu and found limited specific information about this kit.

I've built an FX-440. It works. But, its overall performance is well below what I expected. I won't go into details now, but, I'm wondering if I've done something wrong (I've checked the component placement, soldering, etc. several times now) or if it's time for redesign.....

Has anyone had more encouraging results??

73,

David (kb4fxc)

Yes... are the PowerSonic cells to be used as receiver batteries or as motor batteries in electric airplanes? If the later they are probably rapid charge nicads and most manufacturers recommend these be stored in a discharged state while at the same time recommending that their slow-charge cells be stored in charged state.

>I was wondering if any current/previous owners of
>the MFJ QRP rigs (Model 90xx, I believe) could give
>me their opinions.

The Short Story:
I like my MFJ 9020 with the optional audio filter and keyer.
I have made a few mods to it to clean up the receive audio and will probably
do a couple more.
I sold the 9040 because I don't operate on 40 Meters much and
I have other radios to cover 40.

>what seems to be a reasonable price (~$170 US for
>both the rig and matching power pack).

I paid $125.00 for a 9020 in GOOD condition, no options and
$125.00 for a 9040 in MINT condition with the CW audio filter.

>Is the filter any good? Clean signal? How's the
>overall feel? Is the QSK as grand as the ads make
>it sound?

Yes. Yes. Solid, all the parts are mounted on one PC board, the case is
aluminum.
The 90XX radios do NOT have QSK, they are semi break-in with relay switching.

I can supply more words if needed :-)

HI All.....I am having a problem with my HR2600 10 meter rig.

Just the other day, after the rig ahad been sitting fo some time I turned it on and the stinking thing now has a problem with the VFO knob.

It does not matter which way I turn the knob, but whichever way I do turn it, it always wants to dial up. Could this be a firmware problem in the rig?
Or is it hardware in the VFO kob itself?

Thanks for all your help in advance.

Oh,. the rig does have a CHIPSWITCH in it.

John, n4tii

In rec.radio.amateur.misc, md@pstc3.pstc.brown.edu (Michael Deignan) writes:

>Well, I wish the ARRL would be a little more specific on what exactly is
>"reasonable accomodation".

Unfortunately, is is not the ARRL that decides the true meaning of
"reasonable accomodation"; it is the courts. The best we can do
is to provide the appropriate documents from the several court cases,
(90% winners, as I remember). I only wish MY word alone were enough
to set the meaning of that nebulous legal term.

>And I wish that the FCC would spend a little more time enforcing PRB-1
>rather than make the common folks without the resources fund legal cases.
>Maybe if the FCC actually started taking some cities to court, and won
>big concessions, cities would start to wake up.

We ALL wish the FCC would spend more time on all sorts of enforcement,
from part 97 to EMI susceptibility to things like this. Unfortunately,
although the ARRL does manage to positively influence the FCC in many
instances, we do not have control of the FCC (contrary to a few sly
references to how they are in our back pocket, or vice versa, whenever
someone has nothing real with which to make a point). And, there
have been quite a few hams who HAVE taken cities to court and won
big concessions (and legal fees) from the cities. This has probably
swayed many a local regulatory body, but that is by no means certain.
Much like the rurual judge who cited that "No one is going to tell me
how to do things in MY county), there are pockets of bureaucracy to
be found in local bureaucracies.

>For example, in my town I wanted to put up a 55' crank-up tower.

> <difficult zoning procedure deleted.>

>Basically the zoning ordinances are set up specifically to prohibit
>you from setting up any type of amateur radio tower.

Sure sounds that way to me, too.

>My answer: since the ARRL is "overwhelmed" by people seeking help
>from people, each of whom "think there situation is the most important",
>its clear I shouldn't expect any help from the ARRL. Sure, their
>PRB-1 infopacket may be nice, but when I mentioned PRB-1 casually
>in my conversations with the zoning folks, they said "doesn't
>apply", and I don't have the dough to legally challenge them on their
>interpretation.

I wonder if you obtained the complete PRB-1 package, including court cases. These are many pages long, and cost us a lot to print and mail, so we do try to send them out only when there is a demonstrated need (as opposed to the "just curious" inquiries). I don't know if you have talked to John Hennessee at ARRL HQ, but he can arrange to get the full package sent to folks who are able to discuss why they need it.

BTW -- was nice to meet in person in RI. I look forward to my next visit next year. !

>coupled with the line; current through the line induces a current in the
>coupled inductance, which causes a voltage to be induced across the coupled
>inductance, and you then measure the voltage).

As you exolained, the other distractors are off the mark by quite a bit,
leaving one puzzling about the generalization in option C.

It is confusing and the answer lies in the common method for measuring
SWR. At the risk of starting the SWR discussion all over again,
many common SWR meters measure the SWR using a capacitative
voltage divider and a resistor in the secondary of the transformer to
measure current:

Ground ------| |-----+-----| |-------- tap into line
C |
Meter

```
R |
Ground ---/\/\/\------+--------------- transformer secondary
(line primary)
```

The voltage across R depends on instaneous current. The voltage at C depends on instaneous voltage. When there is no refleced power, the current and voltage in the line are out of phase and the meter is adjusted to read 1:1. Mismatch creates a current flow across the meter. BTW, as expected, the scale is non-linear.

So the answer would be C.

However, this is by no means the only method to measure SWR (sort of). This leaves you with an unsettled feeling about the generalization that the answer implies. You almost feel line answering: Sort of. Not something an average VE would like.

BTW, if you were a VE, what would you do? I would mark it correct. But then again, I like to live dangerously. :) And the VE manual says "If in doubt, grade in candidates favor."

> air due to FAA regulations. (They did not cite which regulations in
> particular. Nor could they after the flight when I specifically asked
> the Captain on leaving the plane.)
>
> Section 91.21. Why do you insist on causing trouble?

Who's causing trouble? I didn't insist that it was my God given right to transmit. Nor did I try and sneak a QSO while in flight. I left the HT in carry-on bag and asked for a clarification of which FAA regulation they (the captain and/or Morris Air Service) were refering to.

Too many times in our society some person will take it upon themself to say "Do this" or "Don't do that" based on their own personal ideas and then when questioned will attempt to put it off on "The Rules" without being able to cite either the rule or the document containing the rule.

As an aside, Julian Macassey was told once that he couldn't purchase RG-6 coax since the FCC prohibited the sale to consumers. I'd love to see where it says that in print.

There are plenty enough rules in this society restricting what I can do without having to put up with vapor-rule invented on the spot by some petty bureaucrat. As an example of this abuse, I would suggest trying to get something unusual done wither in a bank or at a vehicle registration center. You will usualy encounter some middle manager or clerk that decides "Can't do that" and then says, "Those are the rules" without being able to prove it.

As a tribute to not having to accept that, I have managed to cash checks in banks without a credit card, and have managed to get a PO box on my Drivers license.

Perhaps you meant instead that I was "causing trouble" by using the word Morris and or my insuinating that I could only use my HT if connected to a hand key.

As to section 91.21 of the rules, which rules is that a part of? FCC or FAA regulations. Where can I obtain a copy of it.

In the words of Aristotle, "Question Authority".

Hear, hear !! I am one among many very happy OMNI VI owners. Ten Tec has an outstanding reputation for making good gear and providing good service. They suffer mostly from not buying enough glossy ad pages in the magazines (unlike Ken-com-sue) to be on everyone's most-wanted list.

Anybody have info on ham operations around Klamath Falls OR after the earthquake?

Klamath Falls is a small, rural town and after the quake was cut off from road travel on 3 sides due to landslides. Amtrak also reportedly discontinued rail service due to expectations of railway damage. AP reports that 10 blocks of downtown are closed off due to damage (its a national historical area of old brick buildings).

I just spoke with some hams in that area last weekend while passing thru the area and, including past experience, know that it has a very active amateur radio community.

I am considering to buy a copy of BK-MULTY software from
AC4IW for RTTY/AMTOR with my TU (HD3030, TU470 compatible).
I am looking for any views/reviews of it or similar software.

Any comments, especially with its compatibility with Windows,
will be greatly appreciated.

In article <2287@arrl.org>, ehare@arrl.org (Ed Hare - KA1CV) writes:

|> Unfortunately, is is not the ARRL that decides the true meaning of
|> "reasonable accomodation"; it is the courts.

Yes, this is very true. I guess I'm asking for a tall order: someone other than a $150/hr. lawyer to say "here are the restrictions, do you think based upon previous PRB-1 cases they are reasonable?" and get a "yes" or a "no" answer (with appropriate legal disclaimers of course.) Since my posting yesterday, I've received a whole range of replies from "how draconian!" to "how simple".

Naturally, I just *love* the responses which include "just move". As if its that easy....

|> We ALL wish the FCC would spend more time on all sorts of enforcement,
|> from part 97 to EMI susceptibility to things like this. Unfortunately,
|> although the ARRL does manage to positively influence the FCC in many
|> instances, we do not have control of the FCC (contrary to a few sly
|> references to how they are in our back pocket,

Come on, Ed! We all know that the FCC's top officials are just ARRL puppets! I'd almost suspect that they are really cyborgs controlled by a low-band radio link....

|> And, there
|> have been quite a few hams who HAVE taken cities to court and won
|> big concessions (and legal fees) from the cities.

More important are the cases when amateurs loose. These have to be taken into consideration as well. Furthermore, many times precidents set at the state level are not applicable across state boundaries, so unless someone in my state has already fought a PRB-1 battle, often I would be without supporting precident.

|> I wonder if you obtained the complete PRB-1 package, including court
|> cases. These are many pages long, and cost us a lot to print and
|> mail, so we do try to send them out only when there is a demonstrated
|> need (as opposed to the "just curious" inquiries). I don't know
|> if you have talked to John Hennessee at ARRL HQ, but he can arrange
|> to get the full package sent to folks who are able to discuss why
|> they need it.

No, I haven't asked for the package. I don't have the necessary resources to fight a legal battle - hell, my entire "budget" for this tower project was under $3k. When I started to get into $500 and $1000 "engineering study" and "plot plans" (all of which, mind you,

have to be certified by a state-licensed engineer/surveyor), the project simply became impossible to undertake. While I certainly would have no problems paying the appropriate $100 building permit fee, proving the city with $600 worth of "variance request" fees, thousands of dollars in engineering studies and plot plans, not to mention legal fees, all totaling several times what my tower itself would cost, it isn't worth it. As Ross says, "Its just that simple."

Although, here is an idea for the ARRL to chew on (although you might already do this...) How about as part of the PRB-1 information the ARRL could include a list of licensed amateurs who are also lawyers willing to handle PRB-1 cases? That way, those in touchy situations have a ready-source of people who are not only familiar with law, but also radio, and can represent the amateur better. Break the list down by state, for easy reference.

|> BTW -- was nice to meet in person in RI. I look forward to my next
|> visit next year. !

Yes, it was definitely an experience worth repeating. Even if all you did get to do is listen to Tony and I pummel the ARRL all during dinner.... :-)

Stephen D'Amelio (damelio@elba) wrote:
: Jim Duncan (duncan@ravel.ati.com) wrote:
: : DELCO batteries are
: : so neat and reliable that I use them indoors instead of GEL-CELLS to
: : run UPS systems at my house and at my radio station. In fact, at my
: : feet is a Tripplite SB1000b UPS with a several year old DELCO size 27
: : RV battery that has just a little dust on the top but not a trace of
: : seepage.

: Jim, As a HAM I would think you would know and be concerned about outgasses
: that a wet cell like this will produce when charged indoors. Maybe you have a
: setup that is well ventilated, but these batteries should not be used "indoors".
: A gel cell is much more practical in this situation.

: Maybe someone with more knowledge in this area can tell us what gasses are
: expelled when automotive batteries are charged and discharged.

The chemical reaction involved in pure charging and discharging is:

discharge
------->
Pb + PbO + 2H SO <------- 2PbSO + 2H 0
2 2 4 charge 4 2

(Sorry for the lack of half-line spacing for the subscripts; hope that
comes out OK at most sites...)

So in pure charging and discharging, there is no gas involved. HOWEVER...
things are never so pure. The gasses are hydrogen and oxygen, mainly,
from electrolysis of water. But each little bubble of gas that comes up
will blast a tiny amount of electrolyte into the space above the plates
when the bubble bursts. If the battery is constructed properly, and you
charge it properly, have proper ventilation, and check and clean the
outside of the battery as needed, this won't be a problem.

From Fink and Beaty, "Standard Handbook for Electrical Engineers," eleventh
edition, pg. 11-116:

"141. Charging Lead-Acid Batteries. A lead-acid battery can be charged
at any rate that does not produce excessive gassing or high temperature.
A common practice for recharging a fully discharged battery is the two-
step constant-current charge. The charge is started at the C/5 rate
(amperes, corresponding to one-fifth of the rated capacity of the
battery) for 5 h or until the battery begins to gas freely (about 2.4V
[per cell]). The charging current is then lowered to about 25 to 40%
of the starting current to avoid hard gassing which would otherwise

take place. The voltage at the cell terminals will rise again (after dropping with the reduction in charging rate) to about 2.5 to 2.6 V per cell, at which time the battery is charged and again gassing freely. ..."

2.4V/cell --> 14.4 volts --- I've also seen reference to 13.8 volts as a magic number (perhaps elsewhere in the same article), and that if you stay below that at a reasonable charge rate, you will get no or very little gassing.

Remember that gassing represents loss of water, and if you always generate gas on recharging, then you better do something to replentish the water. If batteries were required to gas on recharge, it would make maintenance-free batteries much harder to achieve...

What can I say, I'm not sure why it takes the FCC up to 12 weeks for other people. I took the test on July 17, and it came in the mail yesterday.

Some people have told me that it takes longer if you take your exam through the ARRL, compared to W5YI. I took the test through W5YI, if it indeed really makes a difference.

Too bad I don't have any money to buy a radio, I'd love to use a Yaesu Ft-530.

The FX-440 I assembled:
1. Microphonic to the max. I can shout at it and modulate without a mic.
2. hi-freq IF noise feeds thru to the tx modulator, so hash is on
the carrier.
3. DEAF as a door-nail. Can't hear the local packet stations I would
have wanted to, even if the above did not make it useless.

No, I did not call Ramsey. I won't bother. It's junk.

Source record: 275918

I bought a Radio Shack HTX-202 today, and when I got it home, I noticed a distressing problem!

It seems that when I use my Mac SE and am monitoring the local repeater at the same time, the Mac puts out a signal at 146.850 MHz--right on top of the local repeater! This signal is strong enough to make me turn up the squelch to between 2/3 and 3/4 of full--which then blocks the repeater's signal. Are there any solutions (and no, not using the two at the same time isn't really an option...I'd like to be able to both chat (when I get my license) and compute at the same time (I'm working on my thesis right now, so I'm sitting behind the computer a *lot* right now).

Unfortunately, right now I also can't really afford to put up a better better antenna than the ducky that came with the '202 either. Is there any (cheap/inexpensive) way I can shield my computer? I'm trying to 'member something I heard...*mumble mumble*

Any tips?

Tnx es 73 de Doug N0Z??

How do you like the Kent?

In fact, what do people like and dislike about their paddles? I know there are some interesting ones from Kent and a British maker which goes by a callsign I can't remember offhand.

I use the Vibroplex one with the triangular brass and wood base whose aesthetics I love, but it seems a bit bouncy due to the skimpy aluminum legs between the actual paddles and the contacts... I suspect there are ones that feel better. I hate the aesthetics of any Bencher I've seen.

Is there a generally-agreed "best paddle"?

Why doesn't anyone make wooden paddles? Wouldn't they be nice on the fingers?

Do gold-plated silver contacts really make a difference? I would think they would damp the bounce just a bit, compared with a harder metal.

>Hear, hear !! I am one among many very happy OMNI VI owners. Ten Tec has
>an outstanding reputation for making good gear and providing good
>service. They suffer mostly from not buying enough glossy ad pages in the
>magazines (unlike Ken-com-sue) to be on everyone's most-wanted list.

Hear, hear, hear!!! I suppose my words are mere echoes here, but I am
a happy Ten Tec owner, and am working on slowly Americanizing my shack
as I can.

I walked into HRO the other day and was just struck (and embarassed) by
the fact that I walk into an American Ham Radio store and ALL THEY SELL
is Japanese gear. I know that Ten Tec had to pull back on its dealers
and go direct because the dealers were not doing too well by Ten Tec....
(and/or the product didn't attract enough American buyers, yes). It
really upsets me.

AND another thing, if you care to read on....did you notice that the
Franklin Institute (back in my home state of Pennsylvania) has a ham
station there - and they recently upgraded all their equipment to
Kenwood! Great, an American Institute of Science and Technology showing
the kids that the great Ham Radio Technology comes from the Japanese.
Very disappointing when there are very good Ten Tec radios out there.
(I discerned all this from a photo in QST, so if anyone from W3KTO ?
is listening and can correct me, please do.) I expect more from
such an institution and the clubs that support it/are supported by
it.

|> cellular phone.

Well, here is my emergency communications story.

I was driving down I-95 in Pawtucket, RI at 10pm one evening in
February, on my way to visit a friend.

Directly across from us (I was in middle travel lane) a gentleman
taking an exit hit a patch of ice on a darkened exit ramp, resulting
in his car rolling over.

KD1NR was watching as it happened. Before the car had even completely
come to a halt from its rollover, he was on my mobile radio,
attempting to bring up the autopatch to have emergency services
dispatched. While he was doing this, I had pulled into the breakdown
lane and was attempting to put out emergency flares, since, as indicated
above, the exit ramp was dark, and someone could have easily taken
the exit doing 35 or 40 and smashed into this overturned car.

Anyway, I finished, and went back to Tony to find out if he
had been successful in reaching emergency services. No, he
answered. Apparently, when he attempted to activate the
autopatch, someone decided to start jamming him, apparently,
I guess, figuring that denying a hurt driver proper medical
attention to prevent death was somehow a "funny thing to do".

Luckily, the friend we were going to see (WR1R) was able to
hear us on the input above the jamming, copied the information,
and called it in.

Had we not been there, what would have happened? Well, maybe
someone with a cellphone would have driven by. Maybe someone
else saw the accident and called it in.

But you know, if I were the driver, I personally wouldn't have
cared how many "duplicate" calls were placed to 911 on my behalf.
"Maybe" is an awfully small word on which to bet my life.

> Question: From the WB6NOA review of the HTX-202, I got the impression that the
> Icom battery packs wouldn't lock onto the '202. Any comments?

Douglas-

It is true that the early Icom battery packs don't lock on the HTX-202/404. They didn't lock on the IC-2AT either, and usually stayed on OK.

Recent Icom battery packs do have a locking protrusion on the plate that interfaces with the radio, and they seem to be compatible with the HTX.

The original HTX battery pack has a higher ampere-hour capacity than the old BP-3 pack that came with the IC-2AT. However, it doesn't have the charging terminals on the bottom required for charging in the Icom BC-30 or BC-35 chargers.

If you want to run more power, you need batteries with more cells. If you are willing to spend the money, you could get Icom battery packs with about 13 volts, but you would need one of the Icom chargers to use with them. You could easily spend more money on a battery system, than you spent on the HTX to begin with!

This is _VERY_ good advice. I built the FX-440 (440 MHz FM
transceiver) and found that it's design left a lot to be desired.
There was so much L.O. radiation off the PCB that just moving your
tools around on the bench would pull the VCO. And it also coupled
back into the PLL circuitry so much that the spectrum consisted of
a carrier with 25 kHz spurs on both side out to several hundred
kilohertz with the first pair being only -25 dBc. I ended up
having to fabricate a metal cover for the L.O. and divider, and
this cleaned things up nicely. The designer didn't seem to pay
much attention to ground loops/returns.

Not to mention that several parts were missing, and opening the
squelch causes an obnoxious 'pop', ...

: >
: >I know I sound like a spoil-sport, but Ramsey kits in general make me
: >suspicious that even the properly built kits reliably meet the -60dBc/
: >25 uW max limit for spurious output on a 2m rig....

I'd be surprised if it was this good. For the price it wouldn't be
such a bad deal if they were more careful with the design.

2638. FCC Preempts scanner laws for amateur transcievers

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-22 20:02:49 UTC
From: whs70@dancer.cc.bellcore.com
Message-ID: <1993Sep22.200249.22687@porthos.cc.bellcore.com>
Source record: 275998

FCC Gives Hams new protection against scanner laws'

An FCC decision announced 8/20/93 as a result of PR Docket 91-36
gives Amateur Radio operators a powerful new tool to use against
ill-conceived local and state laws and ordinances.

The essence of the FCC's decision, based on the ARRL motion for a
declaratory ruling is:

"We (the FCC) hold that state and local laws that preclude the possession
in vehicles or elsewhere of amateur radio service transceivers by amateur
operators merely on the basis that the transceivers are capable of the
reception of public safety, special emergency, or other radio service
frequencies, the reception of which is not prohibited by federal law,
are inconsistent the federal objectives of facilitating and promoting the
amateur radio service and, more fundamentally, with the federal interest
in amateur operators' being able to transmit and receive on authorized
amateur service frequencies.
"We therefold hold that such state and local laws are preempted by
federal law."

------The above was excerpted from "The ARRL Letter,", Vol 12, #17,
September 14, 1993, published by the Amateur Radio Relay League (ARRL),
Newington, CT.
-------------------------------------end of excerpted material-------

The above FCC action will do at least one thing immediately...Michigan
is the only state which restricts amateurs to any degree. Michigan
does not include Novice license holders in their state law's exemption.
With this new FCC decision, a Novice in Michigan need not worry about
falling prey to the Michigan scanner law because s/he has an amateur
tranceiver in the car with extended receive capability.

To the best of my knowledge, the few other states with scanner laws
that prohibit radio receiving equipment (e.g. scanners and/or amateur
transcievers) in vehicles, all have exemptions for licensed amateur operators.

The main value of this FCC ruling will be against those local governments
(e.g. cities, counties, townships, etc.) where similar bans against
radio receivers in automobiles have been enacted. Likewise, it is
a valuable tool against the possibility of other states enacting
similar prohibitions, without specifically exempting hams,
where none may now exist.

The ARRL Letter indicated a full write-up on this FCC action will be
in the November QST.

I believe this was done by some Novatel Canada Hams. I believe they burned
a replacement prom but I am not sure. I along with several hams in the
Minneapolis area would also like to find some more information on this mod.
It seems like a good use for my old Radio Shack (Novatel) phone when I take
it out of service.

I would like to get a discussion going regarding any one who has modified
any 800mhz trunking or other equipment into the 902mhz band!!!

2641. SUMMARY: Motorola MICOR and MITREX modifications, crystals, etc.

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-22 20:31:31 UTC
From: bruce@pixar.com
Message-ID: <1993Sep22.203131.15446@pixar.com>
Source record: 276014
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

Here's everything I learned about Motorola MICOR and MITREX radios in
a week. The people who contributed information are:
"Chris Terwilliger" <Chris_Terwilliger@tempeqm.sps.mot.com>
Derek Toeppen <derekt@col.hp.com>
Peter_Simpson@3mail.3com.com
cdp (Chris Peckham)
jreese@NeoSoft.com (Jim Reese)
lyman@a3bee2.radnet.com (William_Lyman)

Any errors that have crept in are my fault, not theirs. However, nobody
but you is responsible if you follow these instructions and something goes
wrong. If you have more information on these radios, please send it to me.

Thanks

Bruce Perens KD6OTD/AE

Motorola's parts hot line is 1-800-422-4210. The people at this hot line
wanted $11.55 for the MITREX manual and took my credit-card order right away.

My local Motorola parts depot quoted $25 for the same manual, did not have
it in stock, and then could not figure out what the shipping cost would be
so they suggested I drive out to the depot and pick it up when they got it.
From this experience I would suggest that you use the 800 number for parts.

The part number for the MITREX UHF manual is 68-81045E75, $11.55

As for channel elements, you can either send them in to one of the many
companies that do them, or you can buy crystals directly and solder
them in yourself. Companies that will make crystals are:

JAN Crystals, 1-800-526-9825, $11.00 per crystal.

Bomar, 1-800-526-3935, $15.00 per crystal or $25 to re-crystal your channel
element for you.

UHF and VHF MITREX elements should be KXN1086 for receive and KXN1088 for
transmit. The crystal companies know the specs for the elements, all they
want to know from you is the transmit and receive frequencies.

For the MICOR, but not the MITREX, there is a company called Channel
Element HQ, 1-800-237-9654. They maintain a very large stock of used
channel elements. They will sell you one on your frequency for $25.00
or $20.00 with trade in. The only catch is: do they have your
frequency? Amateur frequencies are commercial some where else in the
world, so they probably do. All you need to give them is the model
number of the element, the frequency and, for receivers, if its high or

low injection. The advantage of them is there is no waiting for re-crystaling.

This modification of a MITREX 440 to a 9600 full-duplex repeater is from William Lyman, lyman@a3bee2.radnet.com:

I have successfully completed a assembling a 9600 fullduplex data repeater. I used a Mitrex T44 with an MFJ 1270 TNC and Tapr 9600 baud modem with bit regen.
This repeater in now in use at Bethany CT, Portland Ct, and Bridgeport Ct and they are all working GREAT.
My first feeling was it wasn't going to work. I though that internal desens would kill the receive.
Here are some hits and suggestions for making this work Please remember these mods for a Motorola Mitrex T44 UHF model.

1) Be sure to get the elements temp comped! I didn't at first and as it got used it drifted badly as the unit got hot.
2) I maked 2 of the mods that MoAmps published for increasing high frequency response at the limiter/Detector. If you are on a fringe than this will really help.
2a) Remove C240 a .0022 cap. This can be achieved by physically grabbing it with pliers and breaking it away from the PC board. Or you can remove the shield cover and unsolder it. I did the later and that what I suggest.
2b) Remove C451 a 220 cap between U403a pins 2 and 3.
2c) Replace R231, 75.k resister with 2.2k resister
3) Receive audio is (Det) is available on pin 11 of the control cable connector.
4) Lock receive element on. Please note this is for fullduplex only this will cause unit receiver circuitry to be on all the time. If you did this mod in simplex the modem would false by hearing you only transmitted signal and would take longer time to lock.
4a) Locate Q1 and add a jumper across the e and c junction
5) The following are for transmitter mods
5a) locate pin 15 of the interconnect board. This is not pin 15 where the control cable connects but pin 15 on the connector that connects the interconnect PCB to the main PCB. Solder wire from this connection to pin 1 on the backside of where the control cable connects. With unit facing you (lock towards you) this will be the top right most pin. You will see either a white jumper or a coil (small) that goes from pin 1 to the rest of the circuitry. Remove one side of this jumper.
5b) Remove one side of each of the following caps.
C507,C508,C509. This will remove the splatter filter allowing you to use Q503 and q504 to drive the element. You could drive the element directly but I found that there was distortion when driving the element hard. This also matches the Impedance on the Element.
6) Xmit audio is now available on pin 1 on the control cable connector.
7) Rec/Xmit ant connections

7a) On my unit the xmit connection to the ANT relay was hard
wired on to the final AMP. I didn't have any small coax so I left
the ANT relay in. My transmitter connection is at the existing ANT
connector. For the receive I unplugged (RCA JACK). Trace back from
ANT switch. I taped the jack and left in place. I drilled a hole
in the top cover over where the RCA jack plugged in. I then made
a cable with an RCA jack thus making this the Receiver connection.
I only drilled the hole in the cover because covers are easy to
come by if I make a mistake.
8) Cable connections
8a) The following connection to the motorola female connector
should be made.
pin 17 to pin 6 this is negative
pin 4 to pin 12 to + fused at 2 amps (Rec/Xmit enable)
pin 19 + fused at 20 Amp
pin 13 PTT
pin 1 xmit audio
pin 11 rec audio
9) Summary
9a) it is very important that the receive cable be of the best
quality. Remember it is VERY close to the Xmiter. When you adjust
the Xmiter follow the manual very close. You can't have any spurs.
9b) I did experience some desense from the xmiter circuitry
in the range of .03 uV. I find that to be almost non existent.

There might be other ways or mods. These have worked for me
in 3 installations. The mods are made so if you decide to resale
the radio. Just replace cover, install splatter caps, Install
jumper on pin 1, And remove jumper from pin 15 interconnect to pin
1 on cable connector. And resale.

I am running the unit at 50 watts. It get warm, well very
warm. I would suggest that you place some blower fans blowing on
the heat sink. You could get a T74 (110 watt) unit and run it all
day at 50 watts, But they are very hard to come by.

73's and good luck

This modification of a MICOR UHF to duplex mobile is from Jim Reese,
jreese@NeoSoft.com

Why would you want a duplex mobile, you ask? Once you've experienced it,
you'll never go back to jap-trac's.

This describes how to take a standard UHF micor mobile radio and make it
work as a full-duplex mobile radio. Since Texas is high-in, low-out on UHF,
this also includes which cap changes are required to make the radio receive
below 445 MHz.

There are diagrams referenced in this text. If you are unable to figure out
what to do without the diagrams, mail me at jreese@sugar.neosoft.com and I'll
try to get you a copy of the diagrams.

Jim Reese
WD5IYT

Conversion of Motorola MICOR UHF Radio
For Use as a Duplex Mobile

This conversion is not for the faint-hearted. Make sure you are very familiar with the operation of the Micor radio before attempting this conversion. As with all modifications of this type, insure that the radio is operating correctly BEFORE any modifications are made. It is much easier to fix it before you hack it up. Do not attempt this conversion without a service manual. You need the PC layouts and tune up instructions from the service manual in order to perform the modification.

Useful Motorola Part Numbers

68-81015E70-H Manual for UHF MICOR
KXN-1024 5ppm Channel Element for UHF MICOR
KXN-1029 2ppm Channel Element for UHF MICOR
KLN-6210A PL Encode Reed
TLN-8381A PL Decode Reed
66-84690C01 Contact Removal Tool for MICOR plugs
TKN-6458A Large Fuse Holder for Primary Power (40A)

Crystal Ordering Information

When ordering crystals, specify the KXN-1024A channel element number. Always order the crystal on the RECEIVE frequency. If your radio will be a high transmit unit, the crystal will be LOW side injection. For low transmit radios, order the crystals on HIGH side injection. This will flip the transmit offset to the other direction.

Conversion Instructions

Step 1:

Make sure that the radio is operating properly by tuning it up with one of your crystals before any modifications are made. If you are using the radio as a high transmit unit, you must make the capacitor changes in step 2 for the radio to work properly.

Step 2:

If your radio will be receiving below 445 MHz, change C117 to 27pF, C119 to 39pF, and C125 to 12pF on the receiver board. This is not necessary if the radio will be receiving above 445 MHz.

Step 3:

You must make some modifications to the control board and the receiver audio/squelch board in order to make the radio full duplex. First, remove JU-905 on the control board. Next, jump pins 1 and 4 of the audio squelch board. On the later version audio squelch board, there is a place for a jumper (JU-202), on earlier units, just make the jump with wire wrap wire.

Add capacitors at the following points on the audio squelch board. Add a 100pF cap between P903-5 and P903-6. On IC-201, add 15pF caps between pins 3 and 4, and between pins 3 and 5. Add 100pF caps between pins 6, 7, 11, and 13 of IC-201 and ground. On IC-202, add 15pF caps between 5 and 9, 5 and 13, and a 33pF cap between 5 and 15. This makes the board less susceptible to RF. Keep the leads on these caps as short as possible.

Step 4:

Carefully remove the front casting from the chassis. This is done by removing the four screws top and bottom as well as two screws on the control head plug. This is kind of tricky, so be careful to remember how you got it apart so you can re-assemble it later.

Examine the Power Amplifier section of the radio and notice the miniature connector which connects the output of the PA to the circulator. Unplug this connector from the circulator using a needle nose plier or hemostat.

Turn over the radio and remove the power control board. This will expose the top plate of the circulator. Remove the circulator by carefully removing the sensing wires which connect to the power control board and the two screws which hold the circulator in. You will have to unplug the receive antenna coax from the preselector unit in order to remove the circulator. Set the circulator aside for later modification.

Step 5:

Mount a BNC chassis mount connector on the top side of the front casting on the side opposite from where the lock is located. This will be the receive antenna connection. Be very careful to locate this connector so that it does not hinder the operation of the latch mechanism. Attach a small coax to this connector and route it to the receive antenna jack on the preselector unit. Drill a hole in the front of the radio chassis to pass the coax. This will be obvious once you have examined the unit with the front casting removed.

Step 6:

This is the toughest part of the conversion, the circulator modification. Remove the cover from the circulator unit. You will notice that there is a circulator, an output filter, the antenna switch, and the circulator reject load. There are three trimmer caps, only one of which has an access hole in the top plate. Measure and drill the top cover so that you have access to all three trimmers from the outside. This is necessary because the cover affects the tuning of the circulator. After drilling the cover, set it aside.

You must now remove the antenna relay. This is a small relay on the right side of the circulator. The small dark red or green rectangular unit with a wire coming from the relay is the reject load for the circulator. This is a ceramic 75W 50 Ohm resistor. The relay switches the output port of the circulator between the receiver and the reject load. Be EXTREMELY CAREFUL when soldering on the reject load, as the top terminal can break off of the ceramic very easily. I suggest cutting the wire from the relay, removing the relay, and then removing the wire from the load resistor. Once the relay is removed, wire the dummy load back to the output port of the circulator which is

on the common side of the relay. Refer to the manual for the circuit. The easiest way to accomplish this is with a small piece of teflon coax (RG-188). Run from the circulator port to the reject load. You can solder to the circulator case for the shield on the load end of the coax. Replace the cover on the circulator and reinstall it in the radio.

Tuning Instructions

Before tuning, disable the receiver AFC by soldering a wire from the "AFC OFF" trace on the receiver board to ground. The procedure for disabling the AFC is described in the receiver tuning instructions section of the service manual.

Tune the radio per the Motorola manual. Once you have achieved this, you need to tune the circulator. The following procedure should be followed:

Remove the power control board, and power the radio with a supply having a current meter.

Attach a jumper or clip lead from feedthrough C527 on the Controlled Stage in the PA compartment and feedthrough C536 on the driver stage in the PA compartment. This will force the radio to maximum power output.

Key the transmitter and tune the three circulator capacitors for maximum power output.

Reinstall the power control board, and preset the drive limit pot fully counter-clockwise. Set the power set pot to the desired power output level.

Key the transmitter and tune the center circulator capacitor (the only one accessible from the top of the power control board) for minimum current draw. You should be able to make several Amps difference without affecting the power output.

Turn the drive limit pot 1/4 turn clockwise, or until power just starts to fall off.

That's it. Remember to always set the receive frequency first when setting frequency, as this affects the transmitter also. Set the transmitter with the offset trimmer coil on the exciter board. Make sure that you have adequate cooling space around the PA heat sink fins when the radio is installed. The Micor PA is not easy to fix, and when it blows, it blows big.

Jim Reese, WD5IYT | "Real Texans never refer to trouble
jreese@sugar.neosoft.com | as deep doo-doo" --Molly Ivins

This modification of a MICOR UHF to repeater service is from Jim Reese, jreese@NeoSoft.com

Instructions for Conversion of Motorola UHF Micor to Repeater Service

This modification is not for the faint-hearted. Be sure you are very comfortable with the operation of the MICOR radio before you attempt this modification. A thorough understanding of the way the MICOR radio and control system works is absolutely essential for the success of this conversion.

Modification Notes

Whenever "Molex Pin x" is mentioned, it refers to the Armadillo Standard connector. This is a small, 9 pin Molex connector which serves as the interface for all of the Armadillo radios. Use a Female connector on the radio end. The standard pinout of the connector is:

1 - Ground
2 - Receive Audio Output
3 - n/c
4 - Transmit Audio Input
5 - COS Output
6 - PTT Input
7 - n/c
8 - PL Decoder Output (Sense)
9 - PL Select Input

The COS output and PTT input are open-collector to ground signals. Pin 8 goes to +9.6 V when PL is decoded. Pin 9 is ground for PL, open for Carrier.

These modifications allow "PL and Squelch" operation. This means that when in PL, the normal squelch circuit still operates. This avoids long noise bursts upon unkeying.

If using an Advanced Computer Controls controller, the signal at pin 8 is run to the "PL Sense input" on the controller. It will drive this input directly.

Order the crystal on the repeater RECEIVE frequency. You must specify HIGH SIDE INJECTION. If you do not order a high side crystal, the transmit offset will be 5 MHz above the receive frequency, instead of 5 MHz below. I recommend sending the channel element to the crystal manufacturer for temperature compensation. Use a KXN-1024 element for 5ppm accuracy, or use a KXN-1029 element for 2ppm accuracy. Disable the receiver AFC by jumping the appropriate pin of the channel element to ground.

List of Tables and Illustrations

There are several illustrations which are detailed below. Refer to them as needed when modifying or constructing pieces of this project.

Table 1: This is a complete hookup chart for the control head plug and interface board.

Figure 1: Schematic of control head plug, with simple diagram.
Figure 2: Board Layout of audio squelch board detailing added capacitors.
Figure 3: Detail of circulator unit showing location of major components.
Figure 4: Schematic of circulator unit before modification.
Figure 5: Schematic of circulator unit after modification.
Figure 6: Schematic of interface board.
Figure 7: Rough layout of interface board.

Step-By-Step Instructions for Modification

Step 1: Make sure that the radio operates properly BEFORE any modifications are done. If there are problems with the radio, they will be easier to fix before the mods are done.

Step 2: If you are satisfied with the operation of the radio, construct the control head plug per figure 1 and table 1. Use miniature pots and switches inside the control head plug. It is rather tight inside, so be careful to check that the connector will re-assemble before you drill it up. After you have constructed the connector, make the following connections inside the radio: Jump control head pins 3, 8, and 22 to "A+" on the control board. Jump pins 9, 11, and 17 to ground on the control board. Next locate the two feedthrough caps which power the Transmitter Power Amplifier. They are just to the left of the control head plug on the bottom side of the radio. One will have a red wire, and the other a black wire. Jump from the feedthrough with the red wire to the "A+" trace on the control board. Jump from the feedthrough with the black wire to the ground trace on the control board. There is a reverse polarity protection diode on the control board which can be used to make these connections. Next, plug your control head plug into the radio and verify proper operation with the new control arrangement. If there are problems here, troubleshoot them NOW. Do not wait until later, as you may be chasing more than one problem.

Step 3: You must make some modifications to the control board and the receiver audio/squelch board in order to make the radio full duplex and to make preparations for the interface board. First, remove JU-905 on the control board. Then, jump the F1 channel element to ground as described in the Motorola manual. Next, jump pins 1 and 4 of the audio squelch board. On the later version audio squelch board, there is a place for a jumper (JU-202), on earlier units, just make the jump with wire wrap wire. Next, remove a jumper on the audio squelch board which goes from pin 3 of the PL decoder to IC-202 pin 8. This is near the pins which the PL board plugs into. Next, ring from pin 3 of the PL decoder to pin 11 of the audio squelch board with an ohmmeter. There should be continuity here. If not, add a jumper. The later boards have a trace from pin 3 of PL to pin 11 of audio squelch, on earlier boards, pin 11 is unused, and you should jump from PL decoder 3 to audio squelch 11 with some wire wrap wire. Add 15pF capacitors between the following pins on the two chips on the audio squelch board. Figure 2 details the location of these caps. On IC-201, add a cap between pin 3 and 4, and between pin 3 and 5. On IC-202, add caps between 5 and 9, 5 and 13, and two caps between 5 and 15. This makes the board less susceptible to RF.

Step 4: Next, carefully remove the front casting from the chassis. This is done by removing the four screws top and bottom as well as two screws on the

control head plug. This is kind of tricky, so be careful to remember how you got it apart so you can re-assemble it later. Next, examine the Power Amplifier section of the radio and notice the miniature connector which connects the output of the PA to the circulator. Unplug this connector from the circulator using a needle nose plier or hemostat. Next, turn over the radio and remove the power control board. This will expose the top plate of the circulator. Remove the circulator by carefully removing the sensing wires which connect to the power control board and the two screws which hold the circulator in. You will have to unplug the receive antenna coax from the preselector unit in order to remove the circulator. Set the circulator aside for later modification.

Step 5: Procure a BNC chassis mount connector for a receive antenna jack. Mount this connector on the top side of the front casting on the side opposite from where the lock is located. Be very careful to locate this connector so that it does not hinder the operation of the latch mechanism. Attach a small coax to this connector and route it to the receive antenna jack on the preselector unit. Drill a hole in the front of the radio chassis to pass the coax. This will be obvious once you have examined the unit with the front casting removed.

Step 6: This is the toughest part of the conversion, the circulator modification. Figures 3, 4, and 5 detail the conversions. Remove the cover from the circulator unit. You will notice that there is a circulator, an output filter, the antenna switch, and the circulator reject load. There are three trimmer caps, only one of which has an access hole in the top plate. Measure and drill the top cover so that you have access to all three trimmers from the outside. This is necessary because the cover affects the tuning of the circulator. After drilling the cover, set it aside. You must now remove the antenna relay. This is a small relay on the right side of the circulator. The small dark red rectangular unit with a wire coming from the relay is the reject load for the circulator. The relay switches the output port of the circulator between the receiver and the reject load. You must remove the relay and wire the dummy load back to the output port of the circulator which is on the common side of the relay. Refer to the diagram for the circuit. The easiest way to accomplish this is with a small piece of teflon coax (RG-188). Run from the circulator port to the reject load. You can solder to the circulator case for the shield on the load end of the coax. Replace the cover on the circulator and reinstall it in the radio.

Step 7: Construct the interface board using the schematic and board layout in the packet. Install this board on the three unused mounting tabs near the rear center of the radio. These tabs are above the control board. Wire the board up as described in table 1. At this point, the radio will be operating full duplex, and you should be able to put the radio in PL by flipping the switch on the control head plug to the PL position. Verify that you have +9.6 volts at the 9 pin molex connector PL SENSE pin when the correct PL code is being sent. Also verify correct receive audio gating and COS action.

Tune Up Instructions

Tune the radio per the Motorola manual. Once you have achieved this, you need to tune the circulator. The following procedure should be followed:

Step 1: Remove the power control board, and power the radio with a supply having a current meter.

Step 2: Attach a jumper or clip lead from feedthrough C527 on the Controlled Stage in the PA compartment and feedthrough C536 on the driver stage in the PA compartment. This will force the radio to maximum power output.

Step 3: Key the transmitter and tune the three circulator capacitors for maximum power output.

Step 4: Reinstall the power control board, and preset the drive limit pot fully counter-clockwise. Set the power set pot to the desired power output level. I recommend no more than 50W out for a 75W radio, and no more than 60W out for a 100W radio. The 25 and 45W radios are rated continuous duty at 25W output.

Step 5: Key the transmitter and tune the center circulator capacitor (the only one accessible from the top of the power control board) for minimum current draw. You should be able to make several Amps difference without affecting the power output.

Step 6: Turn the drive limit pot 1/4 turn clockwise.

That's it. you are now ready for major repeating action. Remember to always set the receive frequency first when setting frequency, as this affects the transmitter also. Set the transmitter with the offset trimmer coil on the exciter board. Make sure that you have adequate forced air cooling on the PA at all times during operation. The Micor PA is not easy to fix, and when it blows, it blows big.

This modification of a MICOR VHF to repeater service is from Jim Reese, jreese@NeoSoft.com:

Instructions for Conversion of Motorola VHF Micor to Repeater Service

This modification is not for the faint-hearted. Be sure you are very comfortable with the operation of the MICOR radio before you attempt this modification. A thorough understanding of the way the MICOR radio and control system works is absolutely essential for the success of this conversion.

Modification Notes

This modification was developed for radios having receiver RF/IF board series TLD8270A; audio/squelch models TLN4310A-2 thru TLN4310A-5; and exciter models TLD8261A, TLD8262A, TLD8261B, or TLD8262B. If your radio differs from these part numbers, all or part of this modification may be different from the descriptions. Use your judgement to alter these instructions as necessary.

Whenever "Molex Pin x" is mentioned, it refers to the Armadillo Standard connector. This is a small, 9 pin Molex connector which serves as the interface for all of the Armadillo radios. Use a Female connector on the radio end. The standard pinout of the connector is:

1 - Ground
2 - Receive Audio Output
3 - n/c
4 - Transmit Audio Input
5 - COS Output
6 - PTT Input
7 - n/c
8 - PL Decoder Output (Sense)
9 - PL Select Input

The COS output and PTT input are open-collector to ground signals. Pin 8 goes to +9.6 V when PL is decoded. Pin 9 is ground for PL, open for Carrier.

These modifications allow "PL and Squelch" operation. This means that when in PL, the normal squelch circuit still operates. This avoids long noise bursts upon unkeying.

If using an Advanced Computer Controls, S-Com or other commercial controller which requires an active high PL sense signal, the signal at pin 8 can be attached to the "PL Sense input" on the controller . It will drive this input directly. On the S-Com controller, the pull up resistor on the PL sense input must be removed for proper operation.

List of Tables and Illustrations

There are several illustrations which are detailed below. Refer to them as needed when modifying or constructing pieces of this project.

Table 1: This is a complete hookup chart for the control head plug and interface board.

Figure 1: Schematic of control head plug, with simple diagram.
Figure 2: Board Layout of audio squelch board detailing added capacitors.
Figure 3: Schematic of interface board.
Figure 4: Rough layout of interface board.

Useful Motorola Part Numbers

68-81008E40-D Manual for VHF MICOR

K1005A RX Channel Element for VHF MICOR
KLN-6210A PL Encode Reed
TLN-8381A PL Decode Reed
01-84307A89 Empty Control Head Plug less cable, complete with pins
66-84690C01 Contact Removal Tool for MICOR plugs
TKN-6458A Large Fuse Holder for Primary Power (40A)

Step-By-Step Instructions for Modification

Step 1: Make sure that the radio operates properly BEFORE any modifications are done. If there are problems with the radio, they will be easier to fix before the mods are done.

Step 2: If you are satisfied with the operation of the radio, construct the control head plug per figure 1 and table 1. Use miniature pots and switches

inside the control head plug. It is rather tight inside, so be careful to check that the connector will re-assemble before you drill it up. After you have constructed the connector, make the following connections inside the control head plug: Jump control head pins 3, 8, and 22 to +12 V. Jump pins 9, 11, and 17 to ground. Plug the newly constructed control head plug into the radio and verify proper operation with the new control arrangement. If there are problems here, troubleshoot them NOW. Do not wait until later, as you may be chasing more than one problem.

Step 3: There are some modifications required on the control board and the receiver audio/squelch board in order to make the radio full duplex and to make preparations for the interface board. Remove CR201 on the audio/squelch board. Then, jump the F1 channel element to ground as described in the Motorola manual. Next, jump pins 1 and 4 of the audio squelch board. On the later version audio squelch board, there is a place for a jumper (JU-202), on earlier units, just make the jump with wire wrap wire. Next, remove a jumper on the audio squelch board which goes from pin 3 of the PL decoder to IC-202 pin 8. This is near the pins which the PL board plugs into. Check for continuity from pin 3 of the PL decoder to pin 11 of the audio squelch board with an ohmmeter. If there is not continuity, add a jumper. The later boards have a trace from pin 3 of PL to pin 11 of audio squelch, on earlier boards, pin 11 is unused, and you should jump from PL decoder 3 to audio squelch 11 with some wire wrap wire. Add 15pF capacitors between the following pins on the two chips on the audio squelch board. Figure 2 details the location of these caps. On IC-201, add a cap between pin 3 and 4, and between pin 3 and 5. On IC-202, add caps between 5 and 9, 5 and 13, and two caps between 5 and 15. This makes the board less susceptible to RF.

Step 4: Next, carefully remove the front casting from the chassis. This is done by removing the four screws top and bottom as well as two screws on the control head plug. This is kind of tricky, so be careful to remember how you got it apart so you can re-assemble it later. You will expose the antenna relay with its two associated coax cables running to the transmitter and receiver. Unplug the receive coax from the antenna relay.

Step 5: Procure a BNC chassis mount connector for a receive antenna jack. Mount this connector on the top side curved surface of the front casting on the side opposite from where the lock is located. Be very careful to locate this connector so that it does not hinder the operation of the latch mechanism. Attach the receive coax to this connector routing the cable through a hole which you will drill in the front of the radio chassis. The method will be obvious once you have examined the unit with the front casting removed.

Step 6: Construct the interface board using the schematic and board layout in the packet. Install this board on the three unused mounting tabs near the rear center of the radio. These tabs are above the control board. Wire the board up as described in table 1. At this point, the radio will be operating full duplex, and you should be able to put the radio in PL by flipping the switch on the control head plug to the PL position. Verify that you have +9.6 volts at the 9 pin molex connector PL SENSE pin when the correct PL code is

being sent. Also verify correct receive audio gating and COS action.

Tune Up Instructions

Tune the transmitter and receiver per the Motorola manual. Follow the procedures exactly.

Adjust the power set for the desired power output. I reccommend no more than 60 Watts for 110 Watt radios, 40 Watts for 60 Watt Radios, and 30 Watts for 45 Watt Radios.

That's it. you are now ready for major repeating action. Make sure that you have adequate forced air cooling on the PA at all times during operation. The Micor PA is not easy to fix, and when it blows, it blows big.

1) Make a simple J-Pole and hang it at across the room. I don't have an SE, just a Plus. I don't have any problems on 146.82. I don't have an HTX-202...yet, but I'm thinking... :-) just 4 days left on sale...

2) Wrap a piece of cardboard with Aluminium foil and place it between the computer and the radio. A friend did this to solve monitor interference with a second monitor just inches away from from the Plus. I told him to use a 'gator clip to ground it, but he claimed it worked well without the ground.

The MFJs work fine. They have a fairly good receiver, the transmitter
puts out a nice crisp good looking tx signal (4.5 watts or so) very
ruggedc, nice and small, well worth the price. they don't use
much power, they tend to drift a might, and the tx/rec QSK is loud
(it is mechanical) you really should have an audiofilter for the
30 and 40 meter bands.. don''t really neeed it on 20. The keyer works
well (I built my own paddles). I use a small 4ah gel cell.. runs it
for ever.

That's interesting. It hadn't occurred to me to try having Morris while
flying Morris. You could also be eligible for the "Morris High Club"
which is an exclusive group who have engaged in Morris while flying at
or above 5280 feet ASL.
Morris air is a family run outfit that has become very popular in the
PDX area lately. I'm not sure of their in-flight communication equipment
but they undoubtedly achieve Morris everytime they tune in a VOR station.
So I guess its already been done, at least one way.
As for myself, I have to be content with having Morris while flying Cessna.
Morris in a Mooney might be cute. Morris in A Morris Minor anyone?

Washington, probably true, but I doubt that's what the folks in Newington feel. (Well, the folks at 225 Main Street, anyway; I bet most of the folks in the thriving metropolis of Newington don't give a rat's ??? about it, either.) However, I assume that the FCC doesn't have the authority to override covenants, anyway, and the folks at the ARRL probably don't see much point in spending money in a futile effort to lobby Congress.

>There are about 500,000 hams in the US now. When are we going to become
>a political force, capable of influencing these developers ?

As soon as all 500,000 hams try to buy homes in one development? Note that even so, they still wouldn't be able to noticably influence even one Senator, though they'd be a pretty-good-sized House district all by themselves.

The downside, of course, is that WAS would become harder to get than DXCC :-).

I have acquired an MFJ-1224 Interface to go between my rig and my computer. I have found software which will allow RTTY operation on my Atari 1040STE but have yet to find software to use the CW capability of the interface. Essentially the software must read input by high and low state on the RS-232 RX line; however, I have yet to figure out how to POKE or otherwise read this status so I can write the software myself. Any info on existing software, or STE RS-232 info is appreciated.

Does anyone have plans, or know where to get plans for a
high speed 1.2 - 2.4G 1Mb/s (or faster) datalink? Preferably
ethernet interface, but I'll take any other interface.
Thanks

Did you really mean to call the pilot of that aircraft a `petty bureaucrat'?

Someone correct me if I'm wrong (what a silly thing to say on this net...)
but I believe a pilot may implement, within reason, any policy which he/she
feels is necessary for the safety of the aircraft, regardless of the standing
policies imposed by the company. If that pilot believes that transmitting
devices might, no matter how small the chance, interfere with navigation,
then I am very glad that he would say something.

One interesting item that I've noticed with a friend of mine who
has both the IC-02AT (#60K something) and the 04-AT (#1500+something). The
02 will go forever (I mean _forever_) on a BP-8. (8.4V 800mAH) He has
accidently left this thing on for days under his bed. He discovered it
when he heard voices or something like that. This radio, unfortunately,
eats through a BP-7 (12V ~400mAH (?)) like nobody's business. He has found
the opposite true on his 04! (Same batteries). His 04 will go a LONG time
on the 12V battery but eat through BP-8's like crazy.

All of this is second hand (I mean, I wasn't under his bed with his
02 or anything :-) but I have seen the 04 go through several BP-8's in one
session. How's that for psycho?

Shel-

Although a few have sworn they get good audio out of their IC-24AT, I have heard several that had the low audio problem. When I first got mine, I found average deviation set for about 3/4 KHz, peak set for about 3 Khz, on both VHF and UHF. There are separate VHF and UHF peak deviation adjustments. There is no microphone gain adjustment for setting average modulation.

I took it back to Amateur Electronic Supply, where they adjusted the VHF peak deviation to about 4.5 KHz. (At that time, the service manual wasn't yet available.) Average is now about 1 KHz, talking in a normal voice, an inch away from the microphone. I also tried a new microphone element, an old Icom speaker-microphone and a new Radio Shack speaker-microphone, all with similar results. Actually, the external microphones may be a little better, if you can talk closer to the element.

As far as I can tell, there is nothing specific defective with mine. I corresponded with an Icom person, who told me there was no "mod" for it, and that it had been intentionally set low, because of "complaints about background noise". I suspect they just don't want to admit liability!

If your friend has the capability, I recommend that he adjust peak deviation to 5.0 KHz, with CTCS turned ON, adjusting both the VHF and UHF controls. Then, always talk close to the microphone, which is located at the lower right-hand corner of the speaker opening. (You can see it if you hold the radio at the correct angle.) It would be desirable to have access to a service manual.

> It does not matter which way I turn the knob, but whichever way I do turn it, it always wants to dial up.

John-

As I understand it, the knob is attached to a slotted disk, with a pair of LED's shining through the slots, detected by corresponding photo-diodes. Because of the locations of the LED's, the time relationship between the output pulses is an indication of A) the fact that the knob was turned, and B) the direction it was turned.

I suspect that one of the LED/photo-diode sets is not working. It could be as simple as a piece of trash or a small insect blocking the light path. It could be a bad LED, a bad photo-diode, or other component in that circuit. It could be a bad solder connection in the same area.

The HR-2600 seems to have a reputation for problems. I finally got one with no major bugs, on the third try. Each of the first two had a different problem. The microphone element on the third unit went bad after a few months, and it still has a jury-rigged replacement. They apparently don't sell a genuine replacement microphone or element.

I finally solved the problem by getting a Kenwood TS-50S. It is really a dream rig for mobile use.

Doug Reeves, in a private email to me, points out that CAP handles ELT searches in most parts of the county.

I responded that CAP handles ELT searches in those parts of the country that have decent weather.

6-8 months of the year, the Washington Cascades are socked in tight and aerial searches are often unlaunchable. As a consequence this area's S&R team has 3 of its 14 units skilled in ground-based ELT hunting, including ARES, 4x4 Rescue Council and CAP. In addition, MOST of the hunts here are for false-alarm EPIRBs on boats located in harbors around Seattle and aerial searches are not effective in identifying which boat within the harbor has an active EPIRB.

Hopefully this clarifies the local differences in search techniques for ELTs and EPIRBs.

Oh, I have a pilot's license too but am not currently an active pilot.

Seattle, WA September 17, 1993
To all radio amateurs

SB PROP ARL ARLP037
ARLP037 Propagation de KT7H

Solar activity has possibly hit a new low. There were no visible sunspots from September 10 through 12. Prior to that, there has not been a spotless day since July 14, 1987, over six years ago.

Solar flux was below the average for the previous 90 days on every day last week. Conditions were disturbed on September 13 due to coronal hole activity, as predicted in ARLP036. The A index reached 43 and the K index was as high as 7.

Solar flux will rise in the short term, but only slightly, reaching 95 after the end of this month. There is a strong possibility of more disturbances around October 10 from recurring coronal holes.

Sunspot Numbers from September 9 through 15 were 22, 0, 0, 0, 11, 11 and 27, with a mean of 10.1. 10.7 cm flux was 79, 79.1, 78.8, 78.5, 80.1, 81.7 and 84.7, with a mean of 80.3.

The path projection for this week is from Colorado Springs, Colorado to Mellish Reef.

80 meters should be open from 0700 to 1400z, peaking from 0900 to 1200z. 40 meters should be good from 0530 to 1500z, peaking from 0700 to 1330z. 30 meters should be good from 0500 to 1600z, and best from 0700 to 1400z. 20 meters should be open reliably from 0400 to 0600z and from 1400 to 1600z. On some days it will be open from 0330 to 1600z. The least promising time is from 0800 to 1330z, but on some days there should be propagation. 17 meters looks good from 1930 to 2200z and from 0200 to 0400z, and on until 0530z on some days. 15 meters looks good from 1930 to 0230z, and 12 meters from 2000 to 0100z. 10 meters may open some days from 2000 to 0300z, with best bets from 2030 to 0000z.

The ARRL Letter

Vol. 12, No. 17

September 14, 1993

5-year ARRL effort bears fruit

FCC gives hams new protection against 'scanner laws'

An FCC decision on August 20, the result of a 5-year ARRL effort, gives Amateur Radio operators a powerful new tool to use against ill-conceived local and state laws and ordinances.

In the past referred to as the "Scanner laws proceeding," the Commission's Memorandum Opinion and Order actually goes much further than simply saying that amateurs have a federal right to own and operate their radios. The Commission's decision supports at length the very essence of the purpose of the Amateur Service.

The story of the proceeding, PR Docket 91-36, actually begins with the FCC Part 97 Rules Rewrite proceeding in 1988. ARRL's comments in Docket 88-139 proposed the addition of a new section to the FCC Rules to clarify that the possession of amateur equipment, whether or not that amateur equipment is incidentally capable of receiving communications on frequencies allocated to other services, is permissible.

Since that time, state statutes and local ordinances have continued to be construed and applied to permit confiscation of Amateur Radio mobile transceivers from

licensed amateurs, merely because those transceivers are capable of receiving certain land mobile bands as well as amateur frequencies.

The Commission's ruling will relieve amateurs of the growing, unreasonable burden established by these laws, which interfere with the proper functioning of the Amateur Radio Service and public service communications provided by amateurs.

In its handling of PR Docket 88-139, the FCC staff decided to confine the proceeding as much as possible to a restatement of existing rules, and to not address this and other new issues.

But, the ARRL Board of Directors ad-hoc Part 97 Rewrite Committee wanted to keep the issue alive. So, in response to the committee's recommendation, ARRL General Counsel Chris

Imlay, N3AKD, brought to the Executive Committee in the fall of 1989 a draft request for an FCC declaratory ruling. The EC concurred, and the request was filed in November 1989.

The FCC's lengthy Order will be treated at length in November *QST*. The essence of their decision, based on the ARRL motion for a declaratory ruling, is:

"We hold that state and local laws that preclude the possession in vehicles or elsewhere of amateur radio service transceivers by amateur operators merely on the basis that the transceivers are capable of the reception of public safety, special emergency, or other radio service frequencies, the reception of which is not prohibited by federal law, are inconsistent with the federal objectives of facilitating and promoting the

amateur radio service and, more fundamentally, with the federal interest in amateur operators' being able to transmit and receive on authorized amateur service frequencies.

"We therefore hold that such state and local laws are preempted by federal law."

Amateur service defended

The FCC, in the "Discussion" section of its Order, outlines several reasons for "the strong federal interest in the preservation and advancement of the amateur service." The Order cites as evidence the FCC's comprehensive set of rules for the amateur service, rules made to ensure that strong technical standards and operating practices are maintained.

The Order also notes that FCC Part 97 Rules spell out that the amateur service exists to "continue and extend the amateur's proven ability to contribute to the advancement of the radio art" (the FCC's words).

Finally, the Order details recognition of Amateur Radio by the U.S. Congress, in specifically exempting amateurs from license fees and in a 1988 "Sense of Congress" statement that says, in part,

(The Congress) "strongly encourages and supports the Amateur Radio Service and its emergency communications efforts; and government agencies shall take into account the valuable contributions made by amateur radio operators when considering actions affecting the Amateur Radio Service."

ARRL Executive Vice President David Sumner, K1ZZ, said "This result is all the sweeter because we had been discouraged from getting our hopes up. The tide had been running against assertions of federal preemption, and there

was some feeling that PRB-1 represented a 'high water mark' unlikely to be achieved again.

"In short, the preemption declaration in PR Docket 91-36 represents an excellent job by the FCC and its staff, as well as by those in the League who recognized the need, prepared the arguments, and then kept the faith in the face of pessimism about the likely outcome."

League defends position on club call sign program

The ARRL has responded to complaints filed against it by the W5YI-VEC Inc. and the National Amateur Radio Association, in the matter of choosing administrating organizations for a proposed club and military amateur station call sign program.

On August 5 the ARRL filed with the FCC its opposition to the requests of four other entities to serve as call sign administrators, citing shortcomings in their submissions and reminding the Commission that there is no requirement that more than one administrator be named -- "nor any advantage to be gained from doing so."

The ARRL told the Commission that it saw defects in the applications from the other four groups (W5YI-VEC Inc., the NARA, the Quarter Century Wireless Association, and the Southeastern Repeater Association).

In response, the W5YI-VEC and the NARA filed "Motions to Strike" the League's filing. The League has responded by telling the Commission that the Motions to Strike are not the "proper procedural vehicle" to use in taking issue with the League's position, and saying in addition that the claim made by W5YI-VEC and the NARA that the League's opposition was defective is untrue.

W5YI-VEC in its Motion suggested that there is no

FCC rule permitting the League's opposition; the League responded that its pleading was timely filed as opposition to a petition (the applications of the four other groups to be call sign administrators).

The League also said that the Commission could treat the League's pleading (technically called a "Consolidated Opposition") as an informal request for Commission action (allowed under Section 1.41 of FCC Rules).

The League's Consolidated Opposition calls "startling" an allegation of W5YI-VEC that the League "lacks standing" to oppose other groups' being call sign administrators.

In response, the ARRL again cited the history of the new FCC regulation permitting the call sign program, e.g., that the League had the idea in the first place, promoted it within the FCC and in Congress, and then finally urged the FCC to adopt a program once it had been enabled by Congress.

The League further told the FCC that W5YI-VEC objections to the "tone" of the League's August 5 filing were not a basis for a Motion to Strike.

"Suffice it to say," the League said in its Consolidated Opposition, "that the League continues to oppose the self-promotional efforts of unqualified or less qualified organizations to overly complicate and detract from the efficient private sector administration of club and military recreation station call signs...

"Amateur radio clubs and military recreation stations deserve better," the League said.

The League responded to a W5YI-VEC contention that it (the W5YI-VEC) could aggregate groups of people and call them "members," calling such a plan "the essence of a sham

organization."

The League said that the argument of the NARA --

that the League's opposition to the applications of the four

other groups was really a petition to the FCC to reconsider

its Order enabling the entire program -- was simply

incorrect.

The League said that it merely continues to urge the

FCC to decide to appoint only one administrator for the

program; the decision is entirely up to the Chief of the

FCC's Private Radio Bureau, since the enabling legislation

has nothing to say about *how many* administrators should be

appointed.

The League said that the W5YI-VEC and NARA motions

to strike "are no more than an effort to defend (their)

defective applications ... there is absolutely no basis

whatsoever for striking the League's opposition, and those

motions should therefore be promptly dismissed."

No new club or military recreation station call

signs have been issued since 1977.

FCC DENIES PETITIONS

FOR A.R. RESTRUCTURING

The FCC has denied a petition by Scott Leyshon,

WA2EQF, to eliminate written examinations for amateur

operator licenses. At the same time the Commission denied a

petition by Vincent Biancomano, WB2EZG, which, although it

not advocate a "no written test" license, did, the FCC said,

concur in all other respects with Leyshon's proposal.

Leyshon's petition, filed April 19, 1993, argued

that current written examinations place a premium on FCC

rules over technical content. No comments were received on

his petition.

Biancomano's petition, like Leyshon's, was characterized by the FCC as proposing that the Commission state a goal of the amateur service as being either a technical or a non-technical service.

The FCC said that of the 170 questions that appear on examinations for amateur operator licenses, only (their word) 46 concern rules and operating procedures, while 124 concern "contemporary technical matters." The Commission said it did not believe that present examinations place an unjustified premium on rules.

The FCC said that amateurs have over the years expressed the view that they agree with the current statement of the purposes of Amateur Radio, as found in the FCC Rules, and the FCC agreed.

Biancomano has responded to the FCC, challenging their decision. "The FCC for the second time," Biancomano said, "refused to directly address the bulk of the issues brought out in Mr. Leyshon's petitions (and mine), essentially dismissing them with a one-page statement that contains little in the way of information.

"While it is the purview of the Commission to accept or deny a given petition," Biancomano said, it is also the constitutional right of a citizen to petition government and to expect a specific response to specific questions in that petition. The Commission has in fact not provided such a suitable response."

FREE EXAMS FOR NOVICES QUESTIONED BY W5YI-VEC

The W5YI Volunteer Examiner Coordinator (VEC) has filed a complaint with the FCC, asking that the ARRL-VEC be forced to change its policy and begin charging for

administering Novice class examinations. The W5YI-VEC argues that the issue is one of "uniformity," claiming that ARRL benefits financially from giving free exams.

The League, in a response to the FCC, disagreed, saying that "VECs have always had the latitude to set their own fees. We see no compelling federal interest in whether or not a class of nine year olds ought to be charged for taking an entry-level exam."

Two matters are at the heart of the W5YI-VEC complaint, made in a letter to FCC Private Radio Bureau Chief Ralph Haller:

First, that different accounting methods used by various VECs may be contrary to FCC rules governing VECs; some charge examinees on an individual basis, giving (W5YI-VEC told the FCC) VEs and VECs the option of not recovering out-of-pocket costs from any particular examinee.

W5YI-VEC also charged that the ARRL-VEC, by not charging for Novice examinations, stands to benefit financially. "Free examinations," W5YI-VEC said, "when all other VECs charge, attract applicants. These applicants are potential purchasers of examination preparation materials whose purchasing decisions may be unduly influenced by their choice of VECs."

The League's policy also affects codeless Technician licensees who are not charged by the ARRL-VEC for taking the 5-wpm code test to upgrade to "Tech-plus" (thus gaining Novice HF privileges).

ARRL SUPPORTS SHARING OF VE RESPONSIBILITY

The ARRL has gone on record in opposition to a

proposal by the "Rules Committee of the National Conference of Volunteer Examiner Coordinators" (NCVEC) that would require a "contact" volunteer examiner be appointed for each examination session who would have "overall" responsibility for the session.

In comments filed August 30, 1993 to the proposal (RM-8301), the League said that the concept of having three examiners share liability for exam sessions' integrity has worked well since the inception of the volunteer examiner program in 1983, and that the benefits of the three-person team would be diluted by the NCVEC proposal, if adopted.

The League said that the FCC's original Notice of Proposed Rule Making more than ten years ago suggested a three-person team with a "team chief" who must be an Extra Class licensee. That idea was abandoned in favor of an ARRL proposal that a Volunteer Examiner Coordinator system be established (in FCC Report and Order 83-433, which enabled the VE program).

The League said that it should be left to individual VE teams to designate a "team leader" if they wish, "but in no case should the concept of a joint and several liability of the three-examiner team members be diluted."

The NCVEC proposal came out of the Conference's annual meeting in June, 1993. The ARRL-VEC was represented at the Conference but was not a party to the decision to make the proposal to the FCC.

HQ staffers guests at annual JARL Ham Fair.

ARRL International Programs Manager Nao Akiyama, NX1L, has been a long-time guest at the annual JARL Ham Fair held every August in Tokyo. But new ground was broken when the magazine *CQ Ham Radio* offered to bring over ARRL DXCC

Specialist Bill Kennamer, K5FUV, as guest of honor.
After many seconds of deliberation, Bill said yes.
The mission Bill accepted was to speak at the event,
held August 20-22, and to join Nao in the ritual checking of
QSL cards for JA DXers. With an eventual 61,000 attendees it
is no surprise that the pair eyeballed more than 10,000 DX
QSLs, eclipsing the old record of some 8,000 checked (by a
larger crew including field checkers) at the 1993 Dayton
HamVention.
Those 10,000 DXCC credits represented 202 individual
applications, to add to the total arriving in Newington in
September -- the Annual List month and the busiest of the
year!
But this visit was for more than just checking QSLs
-- DXing was the highlight of this year's Ham Fair and
hamdom's premier DX program, DXCC, headed the bill (pardon
the pun).
Bill Kennamer's job was to describe the massive job
of administering DXCC, with special emphasis on ARRL's on-
going work to computerize more than four decades of paper
records.
In advance, Bill and Nao prepared the text for a
brochure on the DXCC program specially tailored to DXers in
Japan, DXCC's biggest "customer" after the U.S. The brochure
describes the mechanics of working smoothly with the DXCC
Branch, and suggests solutions to the special problems of
swapping paperwork from halfway around the world.
Bill and Nao were guests at the elaborate opening of
Ham Fair, complete with a ribbon cutting ceremony to open
the doors. Shozo Hara, JA1AN, President of JARL, gave
opening remarks to the crowd, and served as Master of

Ceremonies for a group of welcoming speeches that followed, including one by Bill. Kennamer also spoke at a noon forum, answering the questions that are common to DXers around the world. "I spent 30 minutes talking and Nao spent 45 translating," Kennamer said with a grin.

After that Bill and Nao went back to work; Nao made appointments for anxious DXers to return to the ARRL booth, so that no more than a handful of them were waiting on line.

The trip ended with presentation of a plaque to JARL commemorating ARRL's 10th attendance at Ham Fair, another plaque thanking CQ Publishing for making Bill's visit possible, and a celebration dinner.

Bill Kennamer also reports finding the best place on earth to buy watches cheap and that McDonald's gets it right in Tokyo, but those are stories for another time (or place).

-- K1TN.

BRIEFS

* The third SAREX flight of 1993 is now set for October 7; STS-58 on Space Shuttle *Columbia* was to have lifted off for a 13 day mission on September 10 but was delayed by recurring problems with the shuttle *Discovery* (STS-51, not a SAREX flight). Fifteen schools are scheduled to participate. Flight information updates will be available on W1AW as the launch date nears.

* Philip M. Kane, N6SP, has been named Engineer-in-Charge of the FCC's San Francisco office. Kane, 56, began his FCC career as an electronics engineer at the S.F. office in 1967 and has been acting EIC there since November, 1992. Before joining the FCC he worked with the Israeli Ministry of Communications and was licensed as 4X4UQ.

Kane, 56, was first licensed in 1952 as K2ASP; he's

an ARRL Life Member.

* The high cost of countries: A newsletter on the scheduled February, 1994 DXpedition to Peter I Island, the most-needed DXCC country in *everybody's* poll, reports that $50,000 has been spent so far. That is a *downpayment*; The newsletter is going to DX movers and shakers and may be followed in greater detail in the various DX newsletters.

* On August 23, 1993, KH6HME and N6CA set a new 902 MHz terrestrial distance record of 2469 mi (3973 km), according to N6CA. The contact, with signals just out of the noise, came at 0136 UTC, on CW. For the next four hours the pair tried unsuccessfully to make contact on 2304 MHz. 144 MHz was used for liaison. Chip Angle, N6CA, built the gear.

* Deadline for DXCC submissions to make the 1993 Annual List is Thursday, September 30 (receipt at HQ). Don't forget that beginning this year the List will not appear in *QST* but rather will be published separately and mailed in early 1994 to all active DXCC program participants.

* Here are several corrections to the list provided by the Foundation for Amateur Radio 1993 scholarship winners published in our August 25 issue: Jeffrey Giesberg, KB2CZB, and Beverlie L. Hartnett, N3NZK, were winners of QCWA Memorial Scholarships; and David B. Perrin, KC1TS, won the Ralph Hasslingler Memorial Scholarship; and Patrick J. KA0ZEQ also was a scholarship winner.

* Japan has made it easier for amateurs from other countries to operate there. On June 16 Japan revised its radio laws to allow foreign nationals who hold Japanese Amateur Radio operator licenses to establish and operate their own radio stations in Japan even if they are from countries not having a reciprocal operating agreement with

Japan.

Amateurs operating under the new arrangement will be

issued "7J" prefixed-call signs, good for five years.

Applications are taken by the International Section of the

Japan Amateur Radio League (JARL). (Thanks *The JARL News*.)

2664. New Part 97.113 REPOST

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-23 00:32:13 UTC
From: marcbg@feenix.metronet.com
Message-ID: <CDs6tq.En6@feenix.metronet.com>
Source record: 275983
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

The following is the 1993 change to FCC rule 97.113

97.113 Prohibited transmissions.

(a) No amateur station shall transmit:

(1) Communications specifically prohibited elsewhere in this Part:

(2) Communications for hire or for material compensation, direct or indirect, paid or promised, except as otherwise provided in these rules;

(3) Communications in which the station licensee or control operator has a pecuniary interest, including communications on behalf of an employer. Amateur operators may, however, notify other amateur operators of the availability for sale or trade, of apparatus normally used in an amateur station, provided that such activity is not conducted on a regular basis;

(4) Music using a phone emission except as specifically provided elsewhere in this Section; Communications intended to facilitate a criminal act; Messages in codes or ciphers intended to obscure the meaning thereof, except as otherwise provided herein; Obscene or indecent words or language; or false or deceptive messages, signals, or identification;

(5) Communications, on a regular basis, which could reasonably be furnished alternatively through other radio services.

(b) An amateur station shall not engage in any form of broadcasting, nor may an amateur station transmit one-way communications except as specifically provided in these rules; nor shall an amateur station engage in any activity related to program production or newsgathering for broadcasting purposes, except that communications directly related to the immediate safety of human life or the protection of property may be provided by amateur stations to broadcasters for dissemination to the public where no other means of communication is reasonably available before or at the time of the event.
(c) A control operator may accept compensation as an incident of a teaching position during periods of time when an amateur station is used by that teacher as a part of classroom instruction at an educational institution.
(d) A control operator of a club station may accept compensation for the periods of time when the station is transmitting telegraphy practice or information bulletins, provided that the station transmits such telegraphy practice and bulletins for at least 40 hours per week; schedules operations on at least six amateur service MF and HF bands using reasonable measures to maximize coverage; where the schedule of

normal operating times and frequencies is published at least 30 days in
advance of the actual transmissions; and where the control operator
does not accept any direct or indirect compensation for any other
service as a control operator.
(e) No station shall retransmit programs or signals emanating from
any type of radio station other than an amateur station, except
propagation and weather forecast information intended for use
by the general public and originated from United States Government
stations,
and communications, including incidental music, originating on United
States Government frequencies between a space shuttle and its associated
Earth stations. Prior approval for shuttle retransmissions must be
obtained from the National Aeronautics and Space Administration. Such
retransmissions must be for the exclusive use of amateur operators.
Propagation, weather forecasts, and shuttle retransmissions may not be
conducted on a regular basis, but only occasionally, as an incident of
normal amateur radio communications.
(f) No amateur station, except an auxiliary, repeater or space
station, may automatically retransmit the radio signals of other
amateur stations.

2665. Re: [HELP] Looking for hams in Prague, Czech Republic

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-23 00:48:14 UTC
From: jad8e@darwin.clas.Virginia.EDU
Message-ID: <CDs7KE.JI0@murdoch.acc.Virginia.EDU>
Source record: 276001

You need to go to a public library and look through a current international callsign book. It's basically like a phone book which lists hams by their callsigns. The Czech Republic's callsigns should begin with the letters OM and then a number.

Once you have names, you could pass them along to your friend to look up.

Your friend would need to be licensed by the Czech Republic if she wanted to transmit by herself. A local ham, however, could supervise her transmissions, thus doing away with the need for her to get a Czech license. Amateurs must be licensed by the country in which they originate their transmissions.

Good luck!

2666. Losses in VHF/UHF connectors (summary)

Here's the replies I received on losses from UHF/VHF connectors.
It's kinda long, but hopefully will be useful info.
73...Jim N2VNO

>
>How much loss is there from PL-239 and SO-239 connectors? Are there
>better connecters to use than these?

The loss of these connectors is mostly a function of their impedance
mismatch and this makes it a function of frequency. If you are
operating below about 100 MHz then your system can probably tolerate
the mismatch without any real hardship, but if you are trying to
operate at 1296 MHz then you'd be much better off with a constant
impedance connector.

Good constant impedance connectors include the N, BNC, and TNC
series. These are all available to fit popular coax sizes such
as RG8, RG213, RG58, RG59, RG11, etc. They do cost more than the
PL259 style, though.

Best regards,

Bob Hale ...!ucsd!btree!hale

You wrote:
You mean there's an impedence mismatch between 50-ohm cable
and PL-239's? What kind of a loss is there at 2-meters?
And where can you find information like this on connectors?

Yes, the so-called "UHF" connectors actually don't work well at UHF.
Many people use them on 2 meters with satisfactory results because
most systems are tolerant of quite a bit of SWR before the
performance degrades to an unacceptable level. And sometimes the
mismatch of the connectors can be absorbed in a newtork (such as
a gamma match) and become invisible to the user, except as a
narrowing of bandwidth.

I don't have any handy numbers for 2 meter operation; the way that
I get my data is to take the cable/connector assembly to be tested
down to our lab where we have a network analyzer. Measuring S11
over the frequency range of interest will tell me how good or bad
it is at any frequency.

Sometimes manufacturers will publish SWR numbers for their
connectors but I have never seen any data for the UHF series;
probably because nobody would want to admit to making anything
that bad.

Hope this helps.

Bob Hale hale@brooktree.com

==========

From: FRANCIS4@applelink.apple.com (Dexter Francis)
Organization: Apple Computer

The PL-239/S0-239 connectors (also known as "UHF") are frequently found
on radios/equipment that operate in the HF and VHF bands. Actually the
best connector you could probably afford is the type "N" unless you are
very well off and can use the 7 mm type connector found on the high end HP
microwave gear. (These were designed by Amphenol are quite unique in that
they are bi-sexual and very expensive @ over $80 each!)

There are probably a dozen connector types in a typical catalog,
but only about 5 show up in regular use: UHF,BNC,TNC,N and SMA.

BNC style connectors are useable up to about 4 gHz.
These are often seen on HT's and scanners as the antenna connector.

TNC type connectors are also useable up to 12 gHz. (at low power levels)
They are often used on cellular/mobile telephones. They look similar
to the BNC (B = bayonet) but are threaded instead (T = threaded)

N type connectors are useable from 1 to 18 gHz. These show up on
radios that run more than a few watts above 440 mhz. They were
designed by the Navy, are real tough and water-proof.

SMA type connectors are also useable up to 18 gHz at low power levels.
These show up on aircraft and low power microwave stuff.

The "problem" with the UHF connectors is that their impedance doesn't
stay flat at higher frequencies, (above 200 mHz) so there are more losses.

You will almost never find them in use above 400 mHz.

Hope this helps.

There certainly are. The "n" connector is better in many ways but a little
more costy.

> better connecters to use than these?
You probably have been covered up in responses telling you about "N"
type connectors (for use with "full-sized" RG-8 type cable) or BNC
(for smaller cables). Note that "N" type are available for smaller
cable, but are special order...

"N" types are so superior, in fact, that even at 146Mhz, there is less
loss with two "N" connectors and adaptors than with PL-259/SO-239
combos... PLUS, the "N" type is easier to solder on and install --
just requires a bit of care, *AND* it is waterproof!

Good Luck...

Thanks for your help, Fred. As you may remember, this is the same HR2600 that has given me a little trouble in the past, either from distorting due to high RFmas well as having all the power pots "peaked to performance" in it.

I'll take out the rotary knob and take a peak at it....hopefully I'll be able to ascertain the problem. I do hope that it is not my Chipswitch custom IC that is causing the problems.

Thanks again for your input.....

> I was wondering if someone could explain to me what a "mod" is

It's a device whereby the amateur can prove his great depth of knowledge by voiding the warranty on his new radio. Usualy to allow the radio to transmit outside of the amateur bands he is authorized. And usualy defended as "Well in case of emergency I might need to". Unlike the mods of the radios of the "good old days" (insert time frame of choice here) which usualy were designed to add features or fix a minor design error, the new mods usualy just expand coverage. As an example, I see many pages of mods for the new hand helds to expand coverage. I haven't seen any to fix the poor speaker audio or intermodulation product problems that plague these DC to Daylight capabile radios.

From: ahall@ux4.cso.uiuc.edu
Message-ID: <27qvrs$c3v@vixen.cso.uiuc.edu>
Source record: 275989

Hello everyone,

I finally got around to this, however I should probably be
studying right now (but this'll be kept between you and I right?).
Well, I basically asked three questions in the space of 1 week and
I was able to come up w/ these answers thanks to many of you out
there!

******1) How do I make my ft411E vox work w/o buying the YH-2 headset?
(I asked this because I ride and a headset doesn't fit too well under
a helmet)
(a)...unfortunately I don't know who gave this info to me, but here
it is: You can use a radio shack electret mike-element (I used a
1kohm resistor in line w/ the center conductor of my jack (that'sa
because they use some type of pre-amp in the one that I bought- it
regulates the input voltage to the mic-element- don't ask me, I just
did it and it works :) There are two different mic-elements for sale,
I used the experiment (pc-board style) element (the one w/ only 2
leads). and I was able to make something w/ this, but for that
I'd like you to read on...
(b)...I was reminded of the in the ear mics that work off of inner-
ear noise (which would work well for my bike, but not for vox)

******2)Info on the headsets that NASA uses in their control room??
(a)...They are made by Plantronics- a good source for them is from
an aviation mail-order shop in OH (suprise! they have another good
use!):
Sporty's Pilot Shop
Clermont Co. Airport
Batavia, OH 45103-9747
or call 1-800-543-8633 and ask for their catalog (you might have
to specify communications- apparently they have a couple of
catalogs)
I called them and recieved their catalog, a lot of interesting stuff,
but didn't feature the headset I was looking for. I had also heard
from a number of people that they are in the $200 range :(
(b)...a source for telephone accessories:
"Hello Direct" (no given 800#, but you could ask the 800-info
number about them)
(c)...Heil makes a nice headset but wouldn't work under a helmet
(d)...use the inner-ear mic-ear peice
(e)...there are bone-conducting mics (pricey and not yet easy to find)
(f)...ask Steve Roberts N4RVE (but I think he's gone sailing)
(g)...go to Japan- they sell all sorts of headsets :)
(h)...the nice Plantronics one is the Telex Airman 750 headset

approx. $200

******3)Does anyone know of the group for bycicling hams??
(a)...(please excuse the typo above!)
Bicycling Mobile Hams of America
send SASE to:
BMHA
Box 4009,
Boulder CO
80306
for a sample of their newsletter and membership info. They
hold a net on 14.253mHz 2230UTC on the 1st and 3rd Sunday of the

month. Contact: Hartley Alley, NA0A on packet:NA0A@WA8ZIA.CO

Well, that should do it for those three questions...
As for what I did w/ my VOX on the FT411e (I haven't tried this under
riding conditions yet- might be too windy)
********I used the radio-shack element (thanks to the unknown ham) wired
the way I said above and their earpiece to make a boom mike. For the
boom, I used 12 gauge wire w/ very small wire going from the mike-element
down the boom to the earpiece, all secured w/ heat shrink. Then bent the
12 gauge around the back of the ear and then did some fidling w/ some stiff
wire my mother used for making wreaths @ x-mas, to hold on the ear-piece.
then kinda made things look nice and lead a 3 element wire from the boom
stuff to the connectors for the rig. I used some left over computer multi-
conductor wire (from DB-9 connectors) which was quite small and flexible.
I rigged up the connectors for the rig w/ some wire and plastic-welder
glue so that it would make a 2-jack type plug (similar to the Yaesu plugs)
so that I would only have to fit one 2-jack plug into the rig. As far
as the rest goes, I wired both the grounds for the mic and earpiece togehter
on one conductor and the other go to the center-conductors on the jacks.
As far as how good this thing looks and works is kinda up to you, if
you spend some time @ it, you can make it pretty sturdy. However,
someone pointed out that the Plantronics-style headset doesn't stay on
too well. Oh, by the way you should find that you can use this
home-made earpeice-boom-mic both on the ft411e vox and also w/ just the
PTT button on the rig- (two headsets in one!- and my total was only
$6.00 dollars -> $1.20 for the mic-element, $1.36 for the earpiece, some
scrap wire hanging around the club and the rest for glue and stuff), so
sounds a bit better than $200, but it might not look as nice, but I've
been told that the response on the mic-element is louder, and maybe even
better than my rig's mic- go figure!

Well, good luck w/ it and this was all done thanks to these people:
Ted Cline
Frank
Paul Marsh
Ted Zateslo
Cantrell
Mark

Greg
Michael Dodson
Alan
Dave
and a few that I accidentally erased while I figured out
how to print out all this excellent info!

Thanks again to everyone who replied!!! I can e-mail this thing
to you if you want, but as far as intricate explanations goes,
I'm kinda crunched for time- but wouldn't hurt to ask if you like.
And as always, I enjoy hearing your input...

73's et CUL!!!

in early summer at a swapfest:

i had spent most of the day talking to old friends and new ones.
i decided to fork up the bucks and buy the Kent paddles. a good
deal. talked to the owner of the booth for while, then walked
away.

about an hour later i saw two 12 yr old boys at the booth admiring
the paddle. so i went up and asked them if they knew the code. one
could do 5 wpm and the other didn't know the code. on the spot i told
them that if within one year they could do 13wpm, i'd give them a $100
bill on the spot. needless to say, both got fairly excited at the big
bucks. that's a $100 each.

later, they both came over to the booth where i was, took down my name
and address and asked, 'if we do it sooner, can we get the money?'
i said yes. so, when they send me their VE certificates they get the money.
they also will get a keyer with it (Heath micromatic, as i have two).

now gang, don't start the flame wars on this one. also, i got their
names so don't send me your certificate. :-) ;-) only two scholarships
per year. operators are not standing by to take your orders. help somebody
today, tomorrow may be too late.

There are (were) 3 MDS channels in the 2156 Mhz range when I looked
a few years ago. I built a downconverter, and was able to receive
HBOs signal from my roof top dish, 40 miles from NYC. There are
a bunch of instructional (ITFS) channels in that band, mostly
used by the Catholic schools in our area. Cable companies around
here transfer signals in the CARS band, which is about 12 GHz.
If you are near a big city, there may be interesting activity
on the MDS band, but it will be almost impossible to find out by
asking, you would have to build a converter (I went down to channel
3), to find out. Two things to remember; MDS signals have the audio
at the opposite end of the 6 MHz spread than a NTSC signal, and
your converter should have a very hot front-end RF amp. Use a very
low noise microwave transistor, on the right kind of PCB.

: In fact, what do people like and dislike about their paddles? I know
: there are some interesting ones from Kent and a British maker which goes
: by a callsign I can't remember offhand.

: I use the Vibroplex one with the triangular brass and wood base whose
: aesthetics I love, but it seems a bit bouncy due to the skimpy aluminum
: legs between the actual paddles and the contacts... I suspect there are
: ones that feel better. I hate the aesthetics of any Bencher I've seen.

: Is there a generally-agreed "best paddle"?

I've had my share of paddles. I currently use a vibroplex with the heavy
metal base.

Best advice: make sure the base is heavy, make sure it doesnt rattle,
and make sure that you dont have to remove some cover inorder to adjust
it.

Dont know about .pcx stuff. You can find out yourself, send mail
to info@arrl.org, in the body of the letter only put the word "info",
(quotes are mine). This shoud get you some info. If you have a fancy
signature, put the word "quit" on the next line.

As an interesting, if somewhat disjointed followup, I recently (tuesday) flew on Delta, and they have finally defined quite specifically the items which may and may not be operated during flight. They specifically prohibit commercial, amateur, CB, and 49 MHZ transceivers, as well as "devices intended to radiate RF energy on a specific frequency", oh, and Radio Controlled toys. They specifically permit scanners, cd players, DAT players, cassette players, Video recorders and players, and Notebook computers, as long as nothing such as a mouse or printer is connected via an external cable. This list may not be all, as I am doing this by memory, but at least they have tried to be reasonable. Oh yes,Radio and TV receivers are not allowed either.

They say that use of all electronic equipment is not permitted during Taxi, Takeoff, Climbout, Descent, or Landing, and use the Seat Belt sign as an indicator.

They do not cite any FCC rules, and they say "Delta air lines does not permit...." I assume since they own the plane, they get to make the rules.

As a 'petty bureaucrat' (Captain for a National Airline) maybe I can shed
some light. I don't have a copy of the FARs in front of me, but our
flight manual, which is an official addition to the FARs, has the
following paragraph...

PASSENGER'S PORTABLE ELECTRONIC DEVICES
No person may operate, nor may any pilot-in-command of an aircraft allow
the operation of, any portable electronic device that may cause
interference with the navigational or communications systems of the
aircraft. The determination of such devices shall be made by the
Air Carrier on which the particular device is to be used.
(FAR 91.21)

Also,

NON-ACCEPTABLE ELECTRONIC DEVICES
The following may not be operated by passengers aboard the aircraft:
A. Radios-AM,FM,VHF, battery or cord operated
.
.
.
E. Portable cellular telephones

The pilots are not directly responsible for these rules. We are simply instructed to follow them. (we don't necessarily agree with all the rules either) They keep changing them so fast it is hard for me to keep up with all the changes. There are some electronic devices that can be used on an airplane, but they have even restricted those to use above 10,000'.

The rules come from the FAA, but I would bet they coordinated them with the FCC. If you need more info., contact your local GADO (General Aviation District Office). I'm sure they can help you more.

>Jim, As a HAM I would think you would know and be concerned about outgasses
>that a wet cell like this will produce when charged indoors. Maybe you have a
>setup that is well ventilated, but these batteries should not be used "indoors".
>A gel cell is much more practical in this situation.

A charging wet cell gives off hydrogen. The Tripplite SPS
has a charging rate of 8 Amperes, which is modest. Gel cells are
expensive and not particularly reliable. These maintenance free
DELCO's would appear to be completely sealed just like a gel cell. A
discharging lead-acid cell doesn't outgas, which is good since the rate
here is about 30A.

>Maybe someone with more knowledge in this area can tell us what gasses are
>expelled when automotive batteries are charged and discharged.

The DELCO batteries are of the maintenance free variety. These don't
seem to bubble and fizz with H2 gas like the conventional type.
Since the evolution of these gases results in water loss, it looks like
the maintenance free type battery somehow minimizes such activity.
Perhaps someone can address the differences between the maintenance
free and conventional battery in terms of elemental hydrogen
outgassing.

2679. Re: High-end paddles

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-23 08:35:56 UTC
From: dstock@hpqmoca.sqf.hp.com
Message-ID: <CDst7x.FqB@hpqmoea.sqf.hp.com>
Source record: 276008

British paddles:

There are the KENT ones, which I prefer, early ones had bent brass arms carrying the contacts, latest ones are one piece machinings with contact studs pressed in. Very nice very solid. Only niggle I've heard about them is th wide-ish paddle spacing. You get used to it.

G4ZPY makes a huge variety of keys and paddles, if you see one you would need to take care to describe it FULLY if you wanted an identical one. He goes in for highly polished brass. The paddles are all inspired by the bencher, and seem a little too delicate for me.

The JONES paddles, a solid hunk of brass, everything adjustable (gap, tension, paddle height and spacing) everything enclosed, looks a bit featureless, but easy to clean. Engraved name a bit too big for good taste, but could be the best key for many.

Hope this helps

David GM4ZNX

Hi All,

Has anyone got some information about tuning a VHF Motorola MC80,
originally tuned to 150Mhz, for use on the 2m Amateur band ?

Any information at all will be useful - thanks in advance.

John

Well, not quite. Novices had better continue to worry (obey the law) until
there are cases decided in Michigan's courts that invalidate the law and/or
the enforcers change their policy. Otherwise any particular individual will
still be subject to arrest, etc., and have only the _hope_ that the
conviction might be overturned on appeal ($$$). Better not risk conflict with
law enforcers meanwhile.

It may help no more than PRB-1 with respect to antennas.

>|> Restrictive covenenats get their power from basic contract law.
>
>Something I could never understand about covenants: How can you
>ever get rid of one? Are you permenantly stuck with it for all time?

If the covenenats have been unenforced by whatever group would be expected to oversee their enforcement, then they can and often are voided. For example, if the covenenats for your neighborhood forbid all outside antennas, but over time, most people have installed TV antennas, CB antennas, etc...then if you put up a ham antenna, your neighbor would have a difficult time trying to have a court enforce the covenant/restriction in light of the fact that your neighbor hadn't seen fit to enforce the same restrictions against other neighbors.

>For example, let's say I discover that there is a covenant on my house
>that says once a year the owner must sacrifice a goat to the god
>Udog-Magamba, and furthermore, the house is 200 years old, and the
>convenant has apparently been there since it was built. What
>could I do to get rid of this?

Religous covenants, or those that prohibit the sale of the property to someone because of their race/gender/etc. are null and void by virtue of their violation of civil rights legislation. Likewise, any covenant that would be a violation of law, would not be enforceable either.

>Most contracts are bwtween two people, but in a covenant, who is the second
>party? Can anyone sue me if I violate a covenant, or must the covenant
>specify who the interested second parties are?

The initial contract between the two parties involved the developer who owned the property when the house was built and the first buyer. In the sale of the house to the first buyer, the first buyer agreed to the covenant(s) being PERMANENTLY attached to the property, through the deed itself, or by the fact that the covenants were recorded against all the lots in the development whereever the local deeds are recorded. That's usually in some county entity.

As to who can sue you, I doubt if there's any specified restriction, but I wouldn't expect anyone who didn't think they had a valid reason for you to not violate a covenenat to be interested. If you lived in an area with such restrictions (e.g. against antennas), then any neighbor could

probably have a valid reason to try and stop all the homeowners in the area from erecting any antennas. Stories abound of neighborhoods where some "self-annointed" homeowner has taken it upon himself to play enforcer.

Having said that, I think you'll generally find that restrictive covenants, when enforced, are usually done so most successfully through an existing homeowners association or by one or more neighbors in close proximity to the homeowner with the "violation."

I'm not an attorney, but as a local elected councilman in my township I actual get to make laws that attorneys and courts ultimately must defend/enforce/etc. Frightening isn't it :-) :-)

>a political force, capable of influencing these developers ?

I wonder how this trend towards banning outside antennas will jibe with the recent changes in the cable laws. Broadcast stations now have the right to remove themselves from the cable (or charge the cable companies to include them). So, suppose your semi-local broadcast station is no longer on cable and you can't receive them directly because you are prevented from putting up a decent antenna. Then you contact the broadcaster and explain how you used to watch that station more than any other station and you bought everything ever advertised on it but now (sniff, sniff) you can't get it anymore and will have to watch some OTHER channel because of that mean old ban on outside antennas. Might you be able to get THEM mobilized against the ban?

Just a thought.

> > iambic paddle with my left hand (i am a rightie)...
>
> How do you like the Kent?

> In fact, what do people like and dislike about their paddles? I know

I have a kent dual paddle and I love it. The only complaint I had was that the paddles were too far apart, but I have gotten used to it :-).

Last weekend one of the guys brought up the kent single paddle which I had been itching to try. Same nice feel and adjustments that are so easy to re-set that I am finding out that people with kent keys don't get upset if you want to adjust it "your way" to try it out. This is in definite contrast to people with benchers who threaten bodily harm if you get near it :-).

He also brought one the the kent straight keys and it has a very nice feel, but I just don't like that style, it seems that you need to be very practiced with those to be understandable.

I like everything about the dual paddle with the exception of the paddle spacing. It does seem that I have gotten quite used to it now. I had intended to get one of the single paddle versions as soon as I could afford it, but I am not sure I will now.

I played with a little vibroplex and didn't like the triangular base nor chasing it all over the table. Other than that, it was OK, I guess.

I tried one of the old "bug" types of ?vibroplex? and I can only say that it was awe inspiring.

I had a bencher and spent a year and a half trying to get it adjusted right. Whenever I would get it "pretty close", the different metals expansion coefficients would cause it to "go off" at 0300. My husband hated it (I never noticed :-). I think that was the main reason he *encouraged* me to get the kent <grin>. I also always had this nagging feeling I should be wearing safety glasses, just in case it decided to play frisbee with all the parts attached to the spring

(again). I aways wanted to get rid of those tacky plastic paddles on that, but was afraid to try to remove the rivets. No, I wasn't a happy bencher user... I spent more time adjusting it than using it. Very rarely got on the air with it.

With the kent, I *enjoy* doing cw. I seems that when you get the thing adjusted (any key I suppose) that it just becomes an extension of your brain, not sure exactly how to describe this, but it works for me.

> Is there a generally-agreed "best paddle"?

Since this is a manual "art" form, I suspect that there are "best" ones for everyone, the guy I sold the bencher to (guilt cringe) is *quite* happy with it (either that or he is rubbing it in), but he asked and offered money. I had planned to just throw it out :-).

> Why doesn't anyone make wooden paddles? Wouldn't they be nice on the
> fingers?

Another good question. The plastic ones that come with the kent are quite nice for what they are. One of the guys here in the qrp group (NEIQS) got some very nice oak and used the supplied ones for templates and made up seveal sets. I finished these lovingly and now have them on the key and they are *nice*. Improves an already nice looking key by alot. I suspect that the reason we get plastic is that it is cheap for the makers to deal with. I sure wouldn't have wanted to pay anyone even minimum wage for the time I put into mine.

> Do gold-plated silver contacts really make a difference? I would think
> they would damp the bounce just a bit, compared with a harder metal.

I suspect that the biggie here is corrosion. I had a key (streight (UGH!)) early on with brass contacts and during very wet weather they became a lovely blue-green color and you had to sandpaper them to get them to work reliably.

> -David.
> (callsign pending, 6 weeks and counting...)

I remember the wait ! Hang in there and welcome to the Amateur Radio Service !

>It may help no more than PRB-1 with respect to antennas.
>Ed Schaefer K9JMA ham radio N97178 aviation

I don't disagree with the essence of Ed's comments, but sooner or later, one of two things will happen: (1) Ideally, the hams in Michigan should contact their elected state representatives and provide them with the FCC decision and ask their elected officials to extend the existing exemption for amateurs to include ALL (i.e. novice too) licensed amateurs. (2) A novice will be charged under the existing law and will be forced to run through the court process leading to the acknowledgement by the court that the FCC preemption takes precidence. Ideally, it would be nice if an attorney with a novice license was the "test case," but I'll bet the ARRL would be most interested in helping pursue any such case, as the outcome benefits all amateurs.

As to the relative value of this recent FCC preemption in contrast to PRB-1, keep in mind PRB-1 did NOT state federal preemption of all restrictive antenna laws, etc. PRB-1 said "reasonable allowances" for antennas must be accomodated. As such, PRB-1 leaves a great deal of latitude for the courts to rule on interpretation, etc. In this recent FCC decision, the FCC clearly states that by federal preemption, local and state laws that would restrict/prohibit amateur operators from having an amateur transciever in their vehicle or elsewhere are preempted. That's much more of an absolute decision than PRB-1.

Interestingly, other than the Michigan Novice situation, all the current state level scanner laws have excellent, broad exemptions for licensed amateur radio operators. The more recent flurry of sanner restrictions, especially in automobiles, has been on local (e.g. city, county, municipality) levels. If I took Ed's position, I'd never drive anywhere for fear of becoming a violator of one of those local ordinances, and probably not even being aware of the existence of the local ordinance (e.g. I'm on vacation somewhere, etc.)

If anything, the FCC decision gives hams a strong tool to bring before any local governing body which may be contemplating a scanner ban of some type. By notifying them BEFORE such an ordinance/law is passed, they can then include language to specifically exempt amateurs as the state level restrictions have done.

Please note, I think all scanner laws which prohibit having a scanner in an auto or anywhere else are wrong, that's why I actively fought for the change in the NJ law which now allows ANYONE to have a scanner in an automobile.

>Any comments, especially with its compatibility with Windows,
>will be greatly appreciated.
>

I have a friend who runs it for RTTY and AMTOR and
and says it's the best he's ever used. Based on that
I got the pactor software (via Schnedler), and while I
haven't had a chance to use it much yet (have to
build a ttl to rs232 for my CP1 first) I have
haywired things enough to copy a little with it
and it works even on a 4.77 mhz machine. The
docs seem well written and I expect good
results when I actually get to it. I have seen
the amtor and rtty stuff run, but haven't used it
myself - seemed to run well.

If the pactor works as well as I think it will, I
will go back and get the rest of the package.

BTW, I don't think it runs under windows or
OS/2. Most of this kind of software, PMP, Baycom,
and various RTTY programs require direct access
to the timing hardware which these GUI programs
get in the way of. With something like a morse
trainer you have enough speed to deal with that
and find a way around, but for realtime digital
reception you pretty much need direct access to
the machine, not through a layer of unpredictable
code.

YMMV

>But you're 100% right that `self-policing' doesn't mean
>`self-enforcing.' Wish Uncle Charlie realized that more often.

I think the FCC actually means that it considers the Amateur Radio
service "self-regulating," rather than "self-policing." The difference
is that Elmering, tradition, mutual training and assistance, maintaining
operating standards, and peer pressure tend to keep the service under
overall control. Other services, such as broadcasting, are essentially
competitive, cutthroat ventures where many stations will try to pull
anything they can possibly get away with to gain an advantage (eg,
without any regulatory supervision, forget public service programming,
many technical standards, abuse of commercial content, etc).

The Commission is unable to commit resources or a large force of
personnel to babysitting a bunch of amateurs, so it relies on the continuation
of hams' record of pride and quality to generally minimize difficulties
that affect the public and other amateurs.

Not to be picky or start a dipute over semantics, but the term
"self-policing" connotes a quasi-"official" means of having amateurs
exercise direct regulatory control over one another. I believe it's
NOT the FCC's intent or desire to have hams acting as "band cops," largely
because amateurs are unlikely to have sufficient training and objectivity
to consider cases of "offenses" in a fair, reasonable manner. It's best
that hams simply set the best example for others and politely offer friendly
support and advice to maintain high technical and operating standards.

No, OM is the new prefix for Slovakia. The Czech hams begin with
the letters OK.

>Your friend would need to be licensed by the Czech Republic if
>she wanted to transmit by herself. A local ham, however, could
>supervise her transmissions, thus doing away with the need for
>her to get a Czech license. Amateurs must be licensed by the
>country in which they originate their transmissions.

This is not necessarily true. In some countries, non-hams
are not permitted to be on the air at all, even if they are
supervised by hams. You should not assume that the rules in the
Czech Republic are the same as here (in Slovenia, for example,
it is forbiden to have a non-ham at the mike, even supervised
by a ham. By the way, as a point of interest, phone patches are
also illegal in Slovenia).

In addition, if the person in the Czech republic wishes to
send messages to people back in the States, there is also the
issue of "third-party traffic." Sending messages, or communicating
in general, on behalf of people who are not hams is ONLY permitted
in the U.S. within the U.S., and to and from countries where the
American government has what's called a "third-party traffic
agreement" with the government of the other country. So, a ham
in Canada, Israel, or Australia, for example, can legally pass
a message to a ham in the U.S. to then be passed along to a
non-ham in the U.S., BECAUSE there is a third-party traffic
agreement between the U.S. and those countries. There are very
few third-party agreements with countries in Europe; and I suspect
we've hardly gotten around with setting one up with the new
Czech government, even if there was one with Czechoslovakia.

If there is not a third-party traffic agreement between the U.S.
and the Czech Republic, it would be illegal for an American ham
to pass a message to someone here from the Czech republic via
ham radio if the final recipient was not a licensed ham.

2696. MFJ-949E antenna tuner

Date: 1993-09-23 21:16:02 UTC
From: cedric@ulysse.ch
Message-ID: <748815362cedric.cedric@ulysse.ch>
Source record: 275861

I'm the owner of the MFJ-949E Antenna tuner. How are the results
with a Levy antenna of 2x13 meters, feeded with 450 Ohms cable.

As I don't have a TX yet, I couldn't test it until now. I've noticed
that the reception is bad vs. a long wire that goes directly the
300 Ohms entry of my receiver.
Does the MFJ need a good ground even in RX only ?

Thanks for any advice.

73 de Cedric, HB9HFN

2697. Standard C550/C558A mods/help needed

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-24 06:05:36 UTC
From: tpang@fraser.sfu.ca
Message-ID: <tpang.748850736@sfu.ca>
Source record: 275829
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

My friend just picked up a Standard C550 dualband HT for me during
his trip to Hong Kong recently. The C550 is the Japanese model of
the C558A in North America. All Japanese HTs lack NiCd packs and
chargers of all brands, but cheaper. All the recent years of Japanese
models are internally almost the same as the export models, and are
thus modifiable to operate in duplex etc. (since repeaters are not
permitted in 2m in Japan, last I know.)

Now my questions:
I have downloaded the C558.mod file from nic.funet.fi ftp site. The
author said a diode 1SS301 is needed for the wide band transmit mod.
Where is that diode available, and how much? I don't actually need
this mod as bad as the wide RX mod. So.

If anyone has the wide RX mod, please e-mail/post, since that is not
in the above file, and since I haven't picked up my radio from my
friend yet, I don't know if it is already modified or not.

My friend told me that it might not come with even a belt clip (yes, some
radios do, and some don't, from Japan.) The Ham Radio Outlet price seems
a little high, does other clip work, without mod? Which mail order has
better price on Standard accessories?

I don't have much money for other accessories now, but I don't mind if
other people have good recommandations on some for this radio. Is there
a review on this rig? How good is it compare to others? I have heard
very good comments on the Standard C5608DA dualband mobile rig, but not
very much on the HTs.

Funny, isn't it I wanted a review after I bought it (and no return policy).
Yes, I think Standard has grown much better lately in their radios. I read
some good comments on the net, just not a detailed review.

I'd like any comments on this rig, and especially the way to do any mods,
including but not limited to extended RX, crossband repeat.

I have owned a Kenwood TH-21AT, a Yaesu FT-23 (Japanese model), and now
use a Kenwood TH-215 (Japanese model).

Thanks in advanced,

Bye,
David

2698. Ten Tec Scout 555 Information

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-24 10:32:50 UTC
From: BONCZEK@hsdwl.utc.COM
Message-ID: <01H3BF07MWIQ00ANOF@utrcgw.utc.com>
Source record: 275830

Does anyone have any experience with the new Ten Tec mobile radio: Scout 555?

I was looking for a ten meter mobile for this winter. Several people told me that with the ten meter band not being that good this winter I should look into the Scout 555. It's a HF mobile that cover 10m thru 80m. It comes with one module for any band.

The Ten Tec ad says $495.00 including one module, $25.00 for each extra module. How good are there radios? Are there any used ones out there? Any good or bad expeience?

Thanks in advance,

Seems this thread came up almost exactly one year ago! Funny how time flies! At that time, everyone and his brother told how terrible UHF connectors are and that using them is a heinous crime unmatched since the times of Attila.

Here's an article that was posted last year by N1AL, who did some actual measurements. Enjoy.

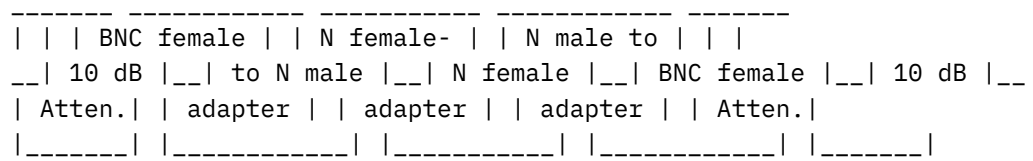
Ya gotta feel sorry for UHF connectors. Recent strings on this notes group lambasted them as worthless at VHF and above, and barely tolerable at HF. One poster called them "5 dB attenuators", and many agreed that there must be some sort of conspiracy among ham equipment manufacturers to inflict such garbage connectors on the amateur community.

Today I finally remembered to bring some UHF adapters from home so I could do some relative measurements of UHF versus type-N. As expected, the type-N showed lower insertion loss at high frequencies, but the UHF connectors were hardly "5 dB attenuators."

For the test I connected an HP8753 RF network analyzer through two short BNC cables into the following arrangement:



Then I repeated the measurement with the N adapters replaced with UHF. I normalized the measurements by replacing the 3 adapters with a BNC double-female. (That is, this was assumed to have 0 dB loss.)

Since two N or UHF adapters were used, I assume the loss per connector is half the total. The vertical scale was .1 dB/division, so I estimated the insertion loss to the nearest .01 dB or so:

--------- Type N ---------- ---------- UHF ------------
FREQ (MHz) TOTAL LOSS PER CONNECTOR TOTAL LOSS PER CONNECTOR
1.8 0 dB 0 dB 0 dB 0 dB
30 0 0 0 0
100 0 0 0 0
150 0 0 .02 .01
200 0 0 .03 .015
450 0 0 .18 .09
600 0 0 .26 .13
900 0 0 .66 .33
1000 .05 .025 .8 .4
1300 .1 .05 .86 .43
1600 .05 .025 .5 .25
2000 .05 .025 .02 .01

Insertion loss increases until about 1200 MHz, and then starts to decrease until it is almost zero for the UHF connector at 2 GHz! At this frequency, the connectors are about 1/4 wave long (1 inch, assuming .66 velocity factor), so I assume that the two adapters are providing a conjugate match to each other. This confirms my assumption that the insertion loss is due to reflections (impedance mismatch), not absorption (true power loss).

Bottom line: UHF connectors work fine through the VHF range, and are not too bad even on the 420 MHz band if you can stand about .1 dB mismatch loss per connector.

By the way, I did not do the full 2-port calibration on the HP8753, so there is a couple hundredth's dB ripple in the plots. I averaged this out by eye to come up with the numbers in the above chart.

AL N1AL

The other problem is that you generally can't stike them from the
contract, because the seller will then just withdraw it. Maybe there is an angle here
as to "signing under duress" (Rotsa ruck, right)

Of course you can fight anything, but do you have pockets that are deep enough?

Bruce, WB4YUC, el YUCCO. . .

Following is what I downloaded from packet:

The following is a file of legislation that The
National Amateur Radio Association hopes to have
introduced into the Florida State Legislature this
fall. It consists of two parts, a resolution
recognizing the importance of Amateurs and a bill that
would void the effect of restrictive covenants
throughout the state.

We are releasing this information early so that hams
in other states might benefit by this action.

73 Donald L. Stoner, W6TNS

RESOLUTION

A resolution recognizing the importance of amateur
radio operators in the state of Florida.

WHEREAS, Congress has expressed its
determination in Section 1 of the Communications Act of
1934 (47 U.S.C. 151) to promote safety of life and
property through the use of radio communications;
WHEREAS, Congress, in Section 7 of the
Communications Act of 1934 (47 U.S.C. 157), established
a policy to encourage the provision of new technologies
and services;
WHEREAS, Congress, in Section 3 of the
Communications Act of 1934, defined radio stations to
include amateur stations operated by persons interested
in radio technique without pecuniary interests;
WHEREAS, the Federal Communications
Commission has created an effective regulatory
framework through which amateur radio service has been
able to achieve the goals of the service;
WHEREAS, these regulations, set forth in Part
97 of Title 47 of the Code of Federal Regulations
clarify and extend the purposes of the amateur radio
service as a --
(1) voluntary non-commercial communications
service, particularly with respect to providing
emergency communications;
(2) contributing service to the advancement
of the telecommunications infrastructure;
(3) service which encourages improvement of
an individual's technical and operating skills;
(4) service providing a national reservoir
of trained operators, technicians and electronics
experts; and
(5) service enhancing international
goodwill;
WHEREAS, the House of Representatives of the
State of Florida finds that members of the amateur
radio service community through magnanimous individual
and private group efforts have provided invaluable
emergency communication services following such
disasters as Hurricane Hugo, and most recently
Hurricane Andrew in the state of Florida, and Hurricane
Iniki even more recently, the Mount St. Helens
eruption, the Loma Prieta earthquake, tornadoes,
floods, wild fires, boat rescues, and industrial

accidents in great numbers and variety across the nation;
WHEREAS, the House of Representatives find that amateur radio service has made a contribution to the state's communications by its crafting, in 1961, the first earth satellite licensed by the Federal Communications Commission, by its proof-of-concept for search and rescue satellites, by its continued exploration of the low earth orbit, in particular pointing the way to commercial use thereof in the 1990's, by its pioneering of communications using reflections from meteor trails, a technique now used for certain government and commercial communications, and by its leading role in development of low-cost, practical data transmission by radio which increasingly is being put to extensive use in, for instance, the land mobile service: NOW, THEREFORE,
Be It Resolved by the House of Representatives of the State of Florida herein assembled:

Section 1: Findings and Declaration of House of Representatives and Recommendations for Future Action. The House of Representatives finds and hereby declares that:
(1) Radio amateurs are hereby commended for their contributions to technical progress in electronics, and for their emergency radio communications in times of disaster, including, most importantly for the state of Florida, their tremendous efforts and assistance in emergency preparedness and lifesaving measures during and after Hurricane Andrew in South Florida;
(2) The Federal Communications Commission is urged to continue to enhance the development of the amateur radio service as a public benefit by adopting rules and regulations which encourage the use of new technologies within the amateur radio service;
(3) The House of Representatives of the State of Florida encourages reasonable accommodations to be made for the effective operation of amateur radios from residences, private vehicles, and public areas, and, additionally, that regulation at all levels of government should facilitate and encourage amateur radio operation as a public benefit;
(4) That legislation should be drafted in the state of Florida to encourage the use and development of amateur radio services in the communities in the state of Florida to allow for the enhancement of this most valuable service for the protection of the people of the state of Florida from

future natural disasters recognizing the importance of amateur radio service in not only emergency preparedness, but lifesaving measures and emergency communications in the event danger approaches Florida's shores.

Suggested Bill

An act amending Florida Chapter 252, Emergency Management and Part I, thereof, recognizing the importance of amateur radio operators in the state of Florida and providing a mechanism and framework for the support of the development and operational capabilities of amateur radio operators in the state of Florida to ensure that amateur radio operators would have the ability to set up towers in various locations throughout the state of Florida to assist in the event of possible emergencies as defined in Florida Statute '252.34(2); providing a definition for amateur operator and placing said definition in Florida Statute '252.34; providing that, notwithstanding any provision of this chapter or other provision of general or special law, the adoption of an ordinance by a governing body, nor any deed restriction, covenant, or similar binding agreement running with the land for the lots or parcels covered by the plat or subdivision prohibiting or having the effect of prohibiting the installation of amateur radio antennae or prohibiting the use, in either a broadcast or receive mode, of amateur radio shall be enforceable; the legislative intent in enacting these provisions is to protect the public health, safety, and welfare of the people of the state of Florida by encouraging the development and use of amateur radio which has proven invaluable, especially during instances of emergency in the state of Florida, and elsewhere, providing an effective date.

Be it enacted by the Legislature of the State of Florida:
Section 1. Section 1 of Florida Statute '252.34, Florida Statutes, 1992 Supplement, is amended to read:
Amateur radio operator a person holding a written authorization to be the control operator of an amateur station as provided by Federal law and the regulations thereunder.

The remaining sections of Florida Statute '252.34 are renumbered accordingly with no changes.

Section 2. Florida Statute '252.62 is added.

'252.62 Amateur Radio Service

(1) Purpose and intent -- It is the purpose and intent of this section to recognize the importance of amateur radio operators in the state of Florida in providing an essential communication source for the protection of the public health, safety, and welfare during emergency crisis and other emergencies as defined in this chapter. This section is designed for the express purpose of recognizing the importance of amateur radio operators in the state of Florida and providing a mechanism to enhance the value of their service as a voluntary non-commercial communication service, particularly in respect to providing emergency communications. This section will provide an avenue whereby amateur radio operators may continue to develop their skills throughout the state of Florida by providing reasonable accommodations for the location and installation of amateur radio antennae prior to an emergency and the development of their skills in advance of any potential emergency in the state of Florida. The Legislature of the State of Florida recognizes the invaluable service that amateur radio operators have played in past emergencies and disasters in this state and wishes to accommodate them so that they may play an increasingly vital and important role in preventing or assisting in the event of future emergencies.

(2) Notwithstanding any provision of this chapter or other provision of general or special law, the adoption of any ordinance by a governing body, nor any deed restriction, covenant, or similar binding agreement running with the land for the lots or parcels covered by the plat or subdivision prohibiting or having the effect of prohibiting the installation of amateur radio antennae or other similar devices, or prohibiting the use, in either a transmitting or broadcasting mode, or both, from any private subdivision development, condominium or cooperative in this state amateur radio operators shall have the ability by law to install an amateur radio antenna at a location which will provide the opportunity to transmit and receive broadcasts during the event of an emergency or otherwise.

(3) The location of the amateur radio antenna shall be at such a location which will reasonably accommodate the needs of the amateur radio operator while providing the minimum of interference with the

rights of others. The sufficient expense of installation, maintenance, operation and liability insurance for said antenna shall be borne by the amateur radio operator(s). Copies of all insurance policies maintained by the amateur operator shall be made available to interested parties upon request. The amateur radio operator may charge 25" per page for the cost of producing said copies.

(4) Reasonable accommodations include by way of example, but are not limited to: making existing facilities accessible to and usable by amateur radio operators.

(5) The amateur radio operator shall procure any and all licenses or permits required for the operation and installation of the amateur radio antenna and shall provide such proof to the subdivision, association, cooperative, etc. prior to installing any antenna.

(6) It is recognized that the provisions of Federal law and, in particular, that of 47 U.S.C.A. and Part 97 of the FCC Regulations shall be strictly adhered to regarding the operation and installation of any antennae on any subjec
covered by the plat or subdivision prohibiting or having the effect of prohibiting the installation of amateur radio antennae or prohibiting the use, in either a broadcast or receive mode, of amateur radio shall be enforceable; the legislative intent in enacting these provisions is to protect the public health, safety, and welfare of the people of the state of Florida by encouraging the development and use of amateur radio which has proven invaluable, especially during instances of emergency in the state of Florida, and elsewhere, providing an effective date.

Be it enacted by the Legislature of the State of Florida:

Section 1. Section 1 of Florida Statute '252.34, Florida Statutes, 1992 Supplement, is amended to read: Amateur radio operator a person holding a written authorization to be the control operator of an amateur station as provided by Federal law and the regulations thereunder.

The remaining sections of Florida Statute '252.34 are renumbered accordingly with no changes.

Section 2. Florida Statute '252.62 is added.

'252.62 Amateur Radio Service

(1) Purpose and intent -- It is the purpose and intent of this section to recognize the importance of amateur radio operators in the state of Florida in providing an essential communication source for the protection of the public health, safety, and welfare during emergency crisis and other emergencies as defined in this chapter. This section is designed for the express purpose of recognithe court or agency shall award the prevailing party its reasonable attorneys' fees.

Section 3. This act shall take effect upon becoming a law.

Well, I got used to talking loudly to compensate for this problem.
I then bought one of the Icom "heavy duty" mics for this HT and found
that I would get reports of over deviation if I held it close to my
mouth and spoke loudly. A friend had the same experience. I think
their cheaper speaker-mic is somewhere in between the internal mic
and the external heavy duty mic. The point here is if you plan to
use an external mic, adjusting the deviation to soup up the internal
mic may cause excessive over deviation when using a good external
mic since both internal and external microphones are controlled by
the same deviation adjustment.

|> Ed Schaefer K9JMA ham radio N97178 aviation

I have decided to somewhat force the issue by getting ham call plates. In states where scanners are outlawed it SHOULD head off any further discussion of the matter and I MAY not need to produce a copy of my license in order to justify the scanner. Most cops that I know have a positive view of hams and the ham plate would tend to make them less suspicous of a vehicle bristling with antennas. I don't agree with the idea of trying to be covert about it - other than to deter theft. I don't want to give officials any reason to think that I'm trying to hide the fact that I have a radios in the vehicle. I also pull over for the police BEFORE they put their lights on if I know I've been clocked and they are coming after me. I have always gotten off with a warning this way. Police tend to appreciate citizens who are up-front about their activities...

> Anthony Lai
Radio modems is the product used in e.g. RAM Mobile Data's Net that can be found all over US. The units are produced by Ericsson Mobile Communications in Stockholm. In USA the frequencies are in the 900 MHz band. These radio modems are working with dedicated base radio stations using a protocol specially designed for this purpose. Telephone number if you want more info is in TOTOWA/NJ 201 / 890 3671. Good Luck /Lars SM0OY

2708. which freqs will FCC sell?

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-24 14:37:27 UTC
From: furr@pilot.njin.net
Message-ID: <Sep.24.10.37.27.1993.26856@pilot.njin.net>
Source record: 275872

The New York Times articles about the FCC's intentions to sell
frequencies for commercial communications have NOT stated where these
frequencies to be sold are in the spectrum. Nor have they mentioned
the Amateur service in any way.

Does anybody know what frequencies will be put up for sale and
what, if any, the impact will be on amateur frequencies and requests
(if any) for future freq allotments?

* ARSENE FAILURE *
==================
The ARSENE satellite is no longer responding to telecommands sent by the FF1STA command station at ENSAE School in Toulouse. Numerous commands have been sent to try to reactivate the satellite without success. Since September 9th at around 00:00 UTC when ARSENE signal was last heard in mode S, controllers have not received any more telemetry from the satellite. The transmission stopped at the moment ARSENE was moving out of a one hour eclipse period. Contrasting with was earlier thought, the SHF power output stage temperature never reached more than 42 degrees Celsius before entering into the Earth shadow. The temperature dropped by ten degrees when in the eclipse part of the orbit. The FF1STA command station was able to observe telemetry data indicating that the automatic system for handling eclipse power conditions was working fine. All collected telemetry data before the failure is carefully being investigated by ARSENE experts. There will be an attempt made to recover ARSENE using the FC1ELL EME station in Argenteuil near Paris, with an 8m dish and high power UHF transmitter.

[Info via Bernard, F6BVP]

* OSCAR-11 FAILURE *
====================
Controllers at the UoSAT Control Centre at the University of Surrey are requesting the help of the amateur radio community around the world in collecting information and data from UoSAT-OSCAR-11. The Forth Diary Operating system aboard UO-11 has crashed. This has rendered the spacecraft in a non-nominal operating state. The collection of information and data related to the operational condition of the spacecraft will be essential in helping the controllers to understand the spacecraft's current condition. Therefore the UoSAT command team is asking radio amateurs around the world to monitor the spacecraft and relay any reception reports and or telemetry data collected from the spacecraft to them via G0SYX @ UO-22, G0SYX @ KO-23

or via the Internet address: D.Loughmiller@ee.surrey.ac.uk.

UoSAT-OSCAR-11 operates on a 2M frequency of 145.826 MHz and on a 70 cm frequency of 435.027 MHz. Controllers are most interested in which beacon is active at the time of any given observation and whether the signal contains data or not. Any telemetry data collected would be of particular interest to the controllers as well. Any observations provided by the amateur community will be most appreciated. UoSAT controllers will issue subsequent bulletins about the status of the UoSAT-OSCAR-11 spacecraft as the situation develops.

[Info via KO5I/G0SYX and the AMSAT News Service]

* VE2ONT MOONBOUNCE TEST *
==========
All appears ready for the upcoming EME tests by The Toronto VHF Society, using the callsign VE3ONT. We will use the 46-m (150') diameter radio telescope at Algonquin Provincial Park (grid FN05xw) during this year's A.R.R.L. International EME Competition.

VE3ONT will be active the full weekend of each contest period, October 9/10 and November 6/7, 1993. Below is the schedule of operations:

Date VE3ONT TX Freq. Listening range Approx. times (UTC)

Oct 9 432.050 MHz 432.050 - 432.060 MHz 0445-1830
Oct 10 144.029 MHz 144.025 - 144.030 MHz 0550-1900
Nov 6 432.050 MHz 432.050 - 432.060 MHz 0340 1700
Nov 7 1296.050 MHz 1296.050 - 1296.060 MHz 0450-1730

VE3ONT will operate "split" and we ask that stations avoid calling us on our transmit frequency. VE3ONT will transmit and receive with left-hand circular-polarization (LHCP) off the dish on all bands. This means that after reflection from the Moon, signals will be right-hand circular polarized (RHCP). This will permit us to work stations with vertical, horizontal, or RHCP polarization. VE3ONT will transmit at the legal power limit on 144 and 432 MHz and 100 watts on 1296. Power amplifiers and receiving preamps are located at the dish feed.

As users of a non-amateur antenna, we will not be in competition with other stations. Our intention is to provide an initial EME contact for as many stations as possible. Consequently, we strongly discourage duplicate or "insurance" contacts. Operation will be primarily on CW, although SSB might be employed depending on signal strength and number of stations calling.

All operation will be "random" format, meaning that VE3ONT will accept no skeds. If conditions are poor, we will use a 30-second sequence in which VE3ONT transmits the first 30 seconds and listens during the second 30 seconds of each minute. Note that this is NOT the usual sequence for EME skeds.

VE3ONT will maintain HF liaison on 14.345 MHz during daylight hours and on 3.818 MHz at night.

We anticipate being able to work OSCAR-class stations with 100 watts of output power on 144 and 432 MHz; 25 watts should be sufficient on 1296. A photograph of the dish is shown in the "Up Front in QST" section of the October issue; see also "The World Above 50 MHz" in the same issue. Technical information concerning the dish and VE3ONT's operation was presented by W9IP and VE3ASO at the Central States VHF Conference and the Eastern VHF/UHF Conference.

For clarification, contact Dennis Mungham VE3ASO (613) 998-7330/989-2339 or Michael Owen W9IP (315) 379-0161/379-5975. QSL to VE3ONT (Callbook address).

>This might have been the case 15 years ago, but I'll be willing to bet that
>most ANY new housing has covanents restricting (usually banning) antennas.
>I'm sure most developers (like apartment landlords) use "boilerplate" legal
>documents from a real estate manual of some sort. It's starting to seem
>like less and less of a "choice" anymore...

This is correct. In my experience in both Kansas and California,
there are very few new housing developments that have no restrictions
on antennas. Many CC&Rs/Deed-Restrictions (including my subdivision)
ban all external antennas altogether, even satellite dishes and TV antennas.

Why did I buy a house with such a restriction if I am a ham? Because
subdivisions that have no deed restrictions offer no protection
against neighbors who let their property deteriorate or do something
strange to it, like painting their house florescent pink or
building some horrendous structure. In this era of stagnant
real estate prices, having a next door neighbor with a pink
house (or, dare I say, a tower and beam) could cause
a significant drop in value of my home. With so many other
houses on the market, a potential buyer can simply look in another
neighborhood if he doesn't like what he sees in yours. The financial
impact on me could run tens of thousands of dollars, and I cannot
afford it.

For some reason, people do not like antennas. Towers and beams
are considered to be ugly and potentially dangerous sources
of electromagnetic radiation. (Whether or not there is scientific
evidence to back this up is irrelevant.) When I sell my house,
the potential buyer sees the tower next door, then walks away.
I wish things were different, but they're not.

I therefore live with the AEA Isoloop and the dipole in the
attic. I work plenty of DX. I will never win a contest on
20m, but I still have fun. I'd love to have a kilowatt
and a quad, but I can't, so I live with what I have. I would
overturn the restrictions on antennas and leave the other
restrictions alone, but that is not possible either.

We are living in a different era now. The deed restriction problem
will not go away. It is very unlikely that any court or

legislative body will make it go away. I'm not saying that's right, I am only saying it's reality.

2714. Spark detector?

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-24 17:17:45 UTC
From: randolph@est.enet.dec.com
Message-ID: <CDv9y8.37E@ryn.mro4.dec.com>
Source record: 275844

In light of my recent problem with arcing plug wires "in the mobile", I want to try to rig up a spark detector.

This needs to be very "deaf", i.e. it doesn't help much in finding arcing if you can hear the sparks from across the room. De-tuning a cheapo AM broadcast radio is the sort of thing I'm thinking about...

It would be nice if I could rig up a small "probe" for waving around under the hood of a car. How about a small coil of wire at the end of a piece of coax, with the other end wound around the loopstick a few times?
-Tom R. N1OOQ randolph@est.enet.dec.com

This is fairly common now. The word is out that you don't have to study for the tests...

2717. Linear amp questions

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-24 17:48:26 UTC
From: drenze@icaen.uiowa.edu
Message-ID: <1993Sep24.174826.15812@news.uiowa.edu>
Source record: 275840

Could somebody please clarify some questions about linear amplifiers for me?

Here is more or less what I'm interested in having explained.

1. What exactly constitutes a linear amplifier?
2. What specific class of license do you have to have to
use one? I think it's general, but the texts I've studied
from aren't totally clear.
3. I recently came across a design for "A 2-Meter FET Amplifier
for Your Handheld" from the October '92 "73" 'zine. Is this
legal for me to operate as a Tech Plus?

Please forgive me if some of these questions are a bit simplistic, but I've
done all my studying on my own and haven't been able to find any local hams
willing to explain the ins and outs of the Amateur Radio Service to me.

Tnx es 73 de Doug N0Y??
License Watch: Day 39 (05W 04D 23H 45M) and counting...

>types, and they actually provide a bit more life than the supplied pack.

I have yet to hear intermod from my HTX-202, although I've heard a few
other HTs become fairly decent white-noise generators in the downtown
area. :-)

The HTX-202 and HTX-404 use the same battery packs as the Icom W2A and
they are readily available. Peripherex has a number of replacement
battery packs ranging from 7.6 volt to 12 volt, 1200 mah for about $65.
You might also check with other vendors such as Battery Packs 'R Us. :-)
Sorry, I couldn't resist. :-)

>The receive audio is wonderful. Much better than ANY HT I have ever used,
>except Motorola. No wimpy Icom audio on these dudes! I also have an Icom
>2SRA, which I enjoy, but the audio is awful compared to the RS.

I agree that the HTX-202 has exceptional audio compared to some of the
other HTs. On the other hand, a good external speaker works wonders for
improving audio quality -- especially in a noisy environment such as in
a car.

>A close friend just bought one of the 202's, and I can tell you that the
>transmit audio is also superb. No hint of bass emphasis and mushy audio
>that are common to other HT's that I've heard him use over the years.
>The transmit audio is clean, clear and very natural sounding. He sounds
>like himself on his, not some nasally somebody else.

One flaw with the transmit audio is its loudness -- or, more appropriately,
its lack thereof. If you get the HTX-202 or the HTX-404, get the speaker/mic
to go with it for improved transmit audio. I'm currently investigating

the quality of other speaker/microphones to further improve the loudness
of the transmit audio.

>They both also have two separate memory banks. One is what you might

>important frequencies in the P memories. Which I often do. Or, perhaps
>I want to monitor one of the standard, and still scan the three P's!
>Which I also often do.

The split memories really come in handy for selective scanning. You can
scan the three priority channels, the twelve memory channels, or all
fifteen. To scan all fifteen channels (not mentioned in the manual),
press MR and ^SC to scan the twelve memory channels then press F+PR.

>Backpacker II QRP rig is a solid competitor, for those who
>are interested. Currently only available in kit form
>though (about $150 US).
>

I think $150 for a DC rig is a lot to pay. YOu still get both
sides of the wave and that means things seem twice as crowded.
I built MANY kits and have 3 MFJs (I built a bunch for a
recent SEpt QST article). The backpakcer is based on the
W7EL design. Oak Hills makes some of the best kits out and I built
their W7EL.. It was a lot of fun and wokrd fine for a DC receiver
don't see any DC receivers in any built gear? think about it.
I found it quite a challange using it and enjoyed it, but
sure wouldn't want to have one as my rig I was
using all the time. The Gary Breeds work much better and put
out a full 5 watts (A&A) eng and the Oak Hills superhet is GREAT.

Done.

Not many of these methods really generate white noise. The preferred solution involves generating a pseudo random bit stream. In pratice this is very easy to do by using serial feedback to the load input of a shift registers. It is possible to generate sequences that take days to repeat using this method.

The shift register needs to be clocked at a frequency much greater than 20 kHz so clock it at half a meg or something. The output bits of the shift register can then be sent to a low cost D to A or just some precision resistors that vary by factors of two in series with each bit output. Then you need a brickwall filter to cutoff quickly above 20 KHz (probably a Chebychev since phase is unimportant with an n of 5 or so) and an amplifier. All of this can be done with a handful of parts costing $5 or $6 bucks at radio shack I would guess.

Or you could get real sophisticated and use an MPU and a bit of code and do it all on one chip. With the exception of the precision resistors and the amplifier. Then you could even add a remote gain control controlled from a button interfaced to the processor and all kinds of other neat goodies like filter shaping if you wanted with a few DSP algorithms. Actually it good become a full time job for an anal retentive person like me it seems like (-:

2722. RS HTX-202 a good buy at $199?

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-24 19:44:42 UTC
From: o10022@waccvm.corp.mot.com
Message-ID: <1993Sep24.194442.10733@schbbs.mot.com>
Source record: 275852

Having seen a scattering of comments on the RS HT-202, it has not yet been clear to me whether it is a good/average/bad unit. It's on sale until 9/25 (tomorrow) for $199.95, and I need to make a decision about buying one.

Recommendations from people familiar with it would be very much appreciated. Response by email might be best (I've no idea whether other readers would be interested in the responses).

Thanks,
Tony Briggs

2723. RG-141 coax wanted!

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-24 20:08:28 UTC
From: kharker@bnr.ca
Message-ID: <27vk3s$q5h@crchh973.bnr.ca>
Source record: 275849
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Help! I can't find any RG-141 coax _anywhwere_! I have called literally
every single electronics, wire, cable, or antenna company listed in the DFW
yellow pages as well as a good dozen Houston stores, but to no avail.
I am trying to build a tnc -> ht cable for my packet setup that has very
high RF shielding, and I have one made on a design by N1CB that uses this cable.
The cable I've got works great - the only problem is that it is only 4' long,
and things would be _much_ more convenient if I could have one around 10' long.
Does anyone, anyone know of _anywhere_ I could buy about 30' of this cable?
The best I've been able to get is "yeah, we could order it from the manufacturer,
but we'd have to get it in a 1000' roll..."
Alternatively, I remember about a month or so back, someone posted a list
of small, specialty electronics mail-order firms. That might be helpful.

I would really, really appreciate _any_ help that might lead me to a source
for this cable. Even if someone could tell me how to get a 30' "sample" from a
manufacturer, or something like that...

Source record: 275848

It would have been nice if the person that followed up my advertisement would have taken the time to look me up in a callsign server. Half the reason I purchased this amplifier from the Hillsboro auction was to avoid letting some CB'er get it. True, I could be overpriced, but the market will determine my selling price since I have done no research myself as to the actual worth of such a device.

SB PROP @ ARL $ARLP038
ARLP038 Propagation de KT7H

ZCZC AP99
QST de W1AW
Propagation Forecast Bulletin 38 ARLP038
>From Tad Cook, KT7H
Seattle, WA September 24, 1993
To all radio amateurs

SB PROP ARL ARLP038
ARLP038 Propagation de KT7H

Solar activity is still very low. On September 22 the Sun had no spots. Solar flux over the past week was only slightly higher than the previous week, but on every day it was lower than the average for the previous ninety days. Geomagnetic conditions were quiet. The A index was zero much of the time, and only reached four on two occasions. This has meant more stable conditions on the lower bands.

Solar flux will rise a little over the near term, but should only reach 95 around October 7 through 10 before drifting down again. The geomagnetic field will be quiet, except for September 30 and October 10, when recurring coronal holes may cause some upsets.

Sunspot Numbers from September 16 through 22 were 37, 27, 52, 18, 19, 25 and 0, with a mean of 25.4. 10.7 cm flux was 88, 85, 85.2, 84.3, 79.7, 80.0 and 79.2, with a mean of 83.1.

The updated version of the WA4TTK solar graph program is now available for download from the ARRL BBS at 203-666-0578. Look for the file SOL25-2.ZIP.

The path projection is for this weekend's RTTY DX contest, and is for a route from Marietta, Georgia to Fiji.

80 meters should be open from 0500z to 1300z, peaking from 0700z to 1130z. 40 meters should be good from 0400z to 1330z, and best from 0530z to 1130z. 30 meters should be usable from 0330z to 1400z, and best from 0500z to 1230z. 20 meters should be open on most days from 0200z to 0330z and from 1300z to 1430z, and on a few days during most of the period in between. 17 meters should be good from 1800z to 2000z and 0000z to 0200z, and on some days on until 0530z. 15 meters should be good from 1800z to 0100z, and on some days on until 0330z. 12 meters should be good on many days from 1830z to

2330z, and on a few days until 0230z. 10 meters should be open one
some days from 1830z to 2300z, with the best bet right around 2000z.

SB DX ARL ARLD050
ARLD050 DX news

Thanks to Ted, KB8NW; the Ohio/Penn PacketCluster Network; Bob, W5KNE; QRZ DX; Chod, VP2ML; The DX Bulletin; and Dick, AA5NT for the items in this week's bulletin.

MELLISH REEF. VK9MM is on the air. Look for them on CW on 1825, 3505, 7005, 10107, 14005, 18077, 21002, 24897, 28005 and 50125 kHz. On SSB, try 1825, 3799, 7086, 14195, 18145, 21295, 24945, 28445 and 50120 kHz. Look for their RTTY on 14080 and 21080 kHz. The operation is scheduled to last until September 28. QSL via VK4CRR.

BANGLADESH. Eric, S21ZG, has been active this past weekend on 17 meters both CW and SSB. Check around 18070 or 18125 kHz between 1300 and 1400z. He was also heard during the week on 14004 kHz, with a good signal with few takers, between 0100 and 0215z. QSL to W4FRU.

ALAND ISLANDS. Ari, OH1EH and Jukka, OH2MAM have constructed a major contest station on the Aland Islands. Look for OH0DX in the SSB portion of the Scandinavian Activity Contest September 26 and 26. QSL to OH2BAD or via the buro.

Club station OH2EW/OH0 will also be active in this contest. QSL via CBA.

FIJI ISLANDS. Operators JA2AO/3D2OH, JA2XW/(N/A), JA2DHG/3D2HG, JA2IVY/3D2YS and JG2BRI/3D2MT will be active from Mama Island from September 23-30. Activity will be on 160-10 meters, CW/SSB/RTTY and the AO-13 satellite. The group plans to be active in the CQ WW RTTY Contest as 3D2VY. QSL via JR2KDN.

GIBRALTAR. Gordon, SM4DHF, will be active as ZB2/SM4DHF, from September 22-28. He will be active on all bands CW/SSB/RTTY. Gordon will be active on September 25-26 during the CQ WW RTTY Contest. QSL to CBA.

ITU, GENEVA. 4U1ITU will be activated by Luc Glarey, I1YRL on September 25 and 26. QSL directly to Luc at Via San Martino 11, 10091 Alpignano (To) Italy.

BAHAMAS. Dick, AA5NT and YL Marian, N5TVL will be active from Treasure Cay, Great Abaco, Bahamas from October 26 to November 2. Dick and Marian will sign C6AFT and C6AHM, respectively. QSL to their home calls.

GOZO ISLAND (MALTA). Ralf, DL9XAT, Holger, DL5XAT, Falko, DG3HC and Olaf, DL4HG will be active October 10-20, as 9H3SA, 9H3SB, 9H3SC and 9H3SD, respectively. They plan to participate in the Worked All Germany Contest (WAG) as an outside DL station. They also plan to print a special full color photo QSL. QSL to their home CBAs.

EQUATORIAL GUINEA. Ed, the operator of 3C1TR, has gone QRT stateside. The next op for this station, Don, is expected to arrive around September 25. QSL via K8JP.

SOMALIA. Rob, N3HQW, is in Somalia and should be on the air anytime now as T5/N3HQW. QSL via WD4NGB.

THIS WEEKEND ON THE RADIO. The CQ World Wide RTTY DX Contest starts at 0000z on September 25. For all the details, see page 115 of September QST.

It may be 'fairly common', I can't say for sure. I can only speak for my own experience taking the Tech test back in August...

The VEs at the session were quite explicit about cheating: they were going to be watching closely, and if anything suspicious took place, the examinees involved would have their materials confiscated, and they would be removed from the testing session and the incident reported to the FCC.

Maybe the FCC doesn't follow-up on these cases, but at least at my session the VEs weren't about to let this type of thing slide.

Don't misunderstand: they were quite friendly and helpful throughout the entire testing process, but they also considered their reputations to be at stake.

If you happen to run across one of the old broadband solid-state amps, like the Pride Electronics model 150, you'll find that you can get about 400 (yes, four hundred!) watts out of it in CW mode on 40 meters, using a Ten-Tec Argonaut to drive it. Be sure to add a muffin fan to it.

For Sale:

All equipment is for VHF-Lo band, 30-50 MHz, so it could be used as business band or retuned for ham-band use. This equipment was from CalTrans, so it was used on, and may have crystals for 47.08 and 47.18, though I have not checked in any of them.

Motorola Motran, model X51LLT-1470A, "cable type 2".
Motorola Motran, model U51LLT-1430B, "cable type 2".

Both are in good physical condition, and are identified with tags stating the reported problem when the units were taken out of service. Tag on first shows a lack of transmit power, and on second, lack of transmit audio. A radio of this model is used at our repeater as a six meter link radio. It produces about 36 watts, and these seem well suited to a repeater or link radio.

Motorola Micor Mobile, model T51RTN(-)1490B SP10.

Excellent physical condition, tag says water damage, and indicates that Q403 and relay K902 are missing. Tag inside indicates 80 watts out. Internal power switch setting can be 25, 50 or 100w. Power amp transistor set (removable block) could be worth quite a bit alone.

GE Mastr Pro, model M564TFN33.

Very good physical condition, tag says poor receive. I have a power cord for this unit, as well as a control head. The control head is in poor physical shape, so I would not consider it part of the package, but more for something to try out. Again, would make a great repeater or link radio with some minor work.

Some sort of large HT, identified only as "804" on the front. Two channel, switch on top for some sort of tone signaling. Has a case for a mercury battery, of which I have one (dead) if you'd like a part number or something. Condition on this unit is unknown, but the other two purchased with it work fine, and had crystals.

Best reasonable offer on anything, you ship COD or by other arrangement, or pick up from San Luis Obispo, California. This equipment has been sitting around in my garage after a CalTrans auction, and being a student, I just don't have much time to work with it, and would like to make a little extra cash. I will consider trade or trade with cash for Sun 350 or 360 workstation with monitor, if you have one.

Reply by mail, or at (805) 544-6108 -- ask for Ryan, or leave message.

Thanks, and 73,
Ryan, KC6WOW

2737. Another last-minute EME test!

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-25 11:59:12 UTC
From: MOWE%SLUMUS.BITNET@CUNYVM.CUNY.EDU
Message-ID: <25SEP93.08625908.0009.MUSIC@SLUMUS>
Source record: 275862

Wow, it seems to be the season for last-minute EME operations!

Late last night I received the following information from Mike Staal, K6MYC:

The 210' dish at GoldStone (Pasadena, CA) will be active on 432 MHz moonbounce TONIGHT and TOMORROW (Saturday & Sunday, September 25 & 26). Using the callsign W6VPH, hams at the Jet Propulsion Lab will use the monster dish for EME tests beginning at their rising Moon. The duration of their operation in not clear, but they plan to be active for at least some of each Moon pass.

Callsign: W6VPH
TX Frequency: 432.020
RX frequency : 432.022-025
Power : 100 W
Polarization: circular. They are using M2 circularly polarized feed at the secondary focus of a Cassegrain (sp?) feed. If their feed is RHCP, then their signal off the Moon will be LHCP (I think).

OSCAR-CLASS station ought to be able to work W6VPH with little difficulty - give it a try!

Why are they doing this? As Mike Staal tells me, it's part of an effort to recover the Mars Observer. Apparently there is a French experiment on board with a transmitter at 437.something. The Goldstone dish is going to try to hear it. The EME tests are part of the testing for that effort.

Have fun - W9IP

2738. Re: Ten Tec Scout 555 Information

>
>The Ten Tec ad says $495.00 including one module, $25.00 for each extra module.
>How good are there radios? Are there any used ones out there? Any good or bad
>expeience?

If all you want is a ten meter rig, there are many more available much cheaper.

The Uniden 2510/2600 are available used for about $160 from AES. They
sell the 2600 new for $199. The radios are am/fm/ssb/cw. Expect to pay
less at a hamfest or swap net.

The Radio Shack version (ssb/cw only) sells "new" from the R/S outlet at
Franklin Mills Mall for $159. Used ones go for about $100.

There are also the Ranger (of out of band CB fame). They go for similar prices
as the Unidens. Also, buying a used Ranger is another way to help get out of
band CBers off they air. :-)

Besides the high price ($500 for the radio plus $150 if you want
80/40/17/15/12/20/10 bands), The scout has a large receive current draw.
I personaly don't like the idea of changing modules to switch bands. It's
fine if you have a neat, organized shack. Driving along at 55 mph it could
be a nightmare.

There are lots of used multiband mobile hf rigs in the $500-$600 range.

Note the Reply-To address (and the corresponding note in my .signature)!
This is temporary, but for the next week or so, it's important.

In article <CDtH1w.It8@cbnewsc.cb.att.com> k9jma@cbnewsc.cb.att.com
(edwin.m.schaefer) writes:

>Gee, that seems pretty extreme. I have a 2m mobile rig (HW2036) always in
>the car but, recognizing that many government agents are hostile to
>or uncomfortable with people with radios and may react negatively, I:
>
>1. Keep the rig concealed from outside view (covered by cloth drape that
>matches car interior colors) (anti-theft measure, too).

Not a bad idea when you leave the car/truck unattended, but certainly not
needed when you're in the car....

>2. Conceal the antenna. Loaded quarter wave looks like cell-phone (this needs
>more work).

That's making you a bigger target for theft than you would have been (I
think...if I'm not mistaken, cell phones are a much juicier target for
thieves than amateur transceivers). And there is no reason why you need
to hide your antenna from the police.

>3. _Never_ have the radio turned on (RX or TX in use) when an agent of any
>government agency not _known_to_me_ to be friendly to the use of
>personal radio equipemnt can see or hear it.

This is going way too far, IMHO. You have a legal license which allows you
to operate on the amateur radio frequencies (or at least, a subset of those
frequencies, depending on your license class). The FCC has ruled, in no
uncertain terms, that it is completely legal for you to have amateur radio
transceivers in your possession, and that local/state laws that say
otherwise based on the fact that you are able to receive public safety,
police, etc. frequences are preempted by federal law.

In other words, you aren't a criminal just because you happen to have a
radio which you are licensed to operate. Don't act like you have to hide
as if you were a criminal.

Of course, you don't want to wave the license in their face if they ask you
about it, either. Just politely and *RESPECTFULLY* explain things to them.

>4. _Never_ transmit where there is any possibility of any government
>agent being able to hear anything on _his_ radio (desense, spurs)
>that might cause him to look around and _see_ me.

See above. Frankly, if I see a Deputy Sheriff (we don't have a local police department---only the sheriff's office) pull up beside me, and I'm in the middle of a conversation, I don't worry about it. If I'm in an area where I have to run higher power (i.e., kick in the 45W amp) to hit the repeater (its hearing isn't that good at times, but its output is), so be it. If they give me funny looks, oh well.... (Of course, they never do.)

>5. Don't talk about radio first. If _they_ ask, even though I tried hard to
>make that unlikely, always answer questions conservatively, i.e.:
>"Yes, sir. Thats a FCC licensed transciever that I use to talk to other
>licensed radio stations." Be truthful, but _volunteer_nothing_.

Well, I can't see why you would talk about radio first (I'm assuming you are referring to being pulled over, or something like that), but that's another story. :-)

Either way, again, as long as you're not breaking the law, you have nothing to hide. Don't act like you do. In fact, I wouldn't be surprised if you actually attracted *MORE* attention by going to such great lengths to hide the fact that you have the radio than you would if it were out in the open about it. After all, if you weren't doing anything illegal, why would you be so secretive around law enforcement officials? Think about it....

Landline BBS open to all: (916) 262-1657
RACESBUL.292 DATE: September 20, 1993

SUBJECT: MGT: Agencies that say "NO!" - Part 2/2

The short weekly drop-in also doesn't help the agency
administrator to become familiar with the unit; nor the necessity
and importance of including the RACES participants in ALL
disaster or emergency preparedness activities of the agency. Such
a casual attitude and interest between the Radio Officer and the
agency can easily leave the Amateurs with no real "meaning" or
"significance" to the agency (other than a possible doomsday
resource).
It takes effort and time to become such an integral part of
the staff that the Radio Officer is a part of them, paid or not.
I did it by volunteering to do whatever my executive, management
and administrative experience could handle. I read files,
studied plans, correspondence and tackled anything that looked
interesting. I did not restrict it to "operating the radio" like
some might. I studied the system, the people, the organization,
the structure - anything that made the situation what it is. I
asked, "Would it help if I did....?" I reviewed and updated
plans, procedures and anything else that needed work. In that way
I demonstrated interest, ability and reliability. That builds a
relationship that will NEVER be constructed by a group that
simply gets a Memorandum of Understanding and sits back and waits
to be called.
Oh, someday, if the situation gets really bad enough the
unit whose key staff is not an integral part of the agency,
whether RACES or otherwise, may get a call-out ....but they
really shouldn't bank on it! The nutshell answer is this: If
your unit is not the way it should be, get a new Radio Officer
who can lead the way and open the channels with the agency in a
meaningful way that fits the local situation.
/Sgd/ Cary R. Mangum, Chief State Radio Officer, W6WWW

(KH6GBX @ WA6NWE.CA)
2800 Meadowview Rd., Sacramento, CA 95832
(916)262-1600
Landline BBS open to all: (916) 262-1657
RACESBUL.293 DATE: September 27, 1993

SUBJECT: MGT: The mission of the RACES

The mission of the RACES is basically to provide needed
communications in emergencies for the government that sponsors
the RACES unit. Its communications are governmental in nature,
that is between government units and not third party health and
welfare messages --- although it may be used for liaison from
government to non-government disaster relief organizations.
Communication links for RACES varies with the jurisdiction.
A State RACES unit has four network levels of support: State to
Federal; State to other states; State to its own agencies and
departments; and State to counties.
A county RACES has three network levels: county to state,
county to city, county to its own units; and possibly a fourth:
county to county.
City network levels are: city to county, inter-departmental
and possibly inter-city.
These networks are specified in the jurisdiction's RACES
plan, which emphasizes the importance of having the plan in
advance of an emergency.
In serving its mission, RACES resources are available to all
departments or agencies of that jurisdiction; i.e., state, county
or city. For example, the State department of transportation has
a RACES unit as does Health Services and each of six State OES
Regions, all coordinated by the State Office of Emergency
Services. However, there is only one RACES plan (and hence,
program) for the State, coordinated by the State RACES
Coordinator with administration and liaison delegated to the
Chief Radio Officer. In a similar manner each jurisdiction can
administer its RACES program.
EOM

2742. RACES Bulletin #291

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-25 15:40:13 UTC
From: enge@almaden.ibm.COM
Message-ID: <9309251540.AA14767@ucsd.edu>
Source record: 275866

Bid : $RACESBUL.291

TO: ALL EMERGENCY MANAGEMENT AGENCIES VIA AMATEUR RADIO
INFO: ALL RACES OPERATORS IN CA (ALLCA: OFFICIAL)
ALL AMATEURS U.S. (@ USA: INFORMATION)
FROM: CA STATE OFFICE OF EMERGENCY SERVICES
(KH6GBX @ WA6NWE.CA)
2800 Meadowview Rd., Sacramento, CA 95832
(916)262-1600
Landline BBS open to all: (916) 262-1657
RACESBUL.291 DATE: September 13, 1993

SUBJECT: MGT: Agencies that say "NO!" - Part 1/2

Why does this occur? Why do some agencies say "No" to
communications volunteers and refuse to call them out? Why does
an auxiliary communications unit by whatever title --- ECS
(Emergency Communications Service), DCS (Disaster Communications
Service), ARES or RACES --- wither and die for lack of agency
support or inclusion in its on-going activities?
One real possibility is that the agency administrator may
need help in working with a group of people he/she is not
accustomed to having around. Not that he/she isn't a professional
in their own field, but that the person has little experience
working with unpaid professionals with an abiding interest in
emergency communications. Perhaps the key response here is one of
inter-personal relationships, chiefly between the agency people
and the Radio Officer. With the right personality and skill, the
Radio Officer CAN establish the liaison and relationship.
Another possibility is that the Amateurs take the situation
for granted without realization. Yet another is that the
volunteers don't comprehend the agency needs and relationships.
When did they last show a willingness to help the agency in its
DAY-TO-DAY affairs? [so as to better understand the agency]
How have you utilized the RACES bulletins? They are
addressed to agency administrators, via the Amateur Radio
Service, to be DELIVERED IN PERSON by an interested Amateur to
the agency administrator, even if there is no unit, or a "paper"
unit. Such on-going contact BEGINS the process of familiarization
and rapport. Where a unit exists, it is the Radio Officer that is
responsible for the situation. If he/she isn't an INTEGRAL part
of the agency, get another one!
The Radio Officer won't learn much about your agency, or
become an integral part of your staff, by simply delivering a
bulletin weekly. That's just the door opener. It takes time to

learn the nuances of personalities, the quirks of procedures, and
the unwritten aspects that affect the agency.
(continued in Part 2 of 2 parts)

2743. WARNING: Potential Satellite Proton Event Warning - 25Sep93

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-25 16:24:07 UTC
From: oler@rho.uleth.CA
Message-ID: <9309251624.AA13545@rho.uleth.ca>
Source record: 275867

/\

POTENTIAL SATELLITE PROTON EVENT WARNING

ISSUED: 16:00 UT, 25 SEPTEMBER

/\

ATTENTION:

Protons at greater than 10 and 100 MeV became enhanced at
approximately 04:30 UTC on 25 September. Protons at greater than
10 MeV reached a maximum of approximately 1.0 pfu at 05:30 UTC,
while protons at greater than 100 MeV reached a peak value of
approximately 0.35 pfu by 06:00 UTC.

The source of this activity is likely from Region 7585, which has
shown strong growth and building x-ray emissions over the last 24
hours. A very long duration class C2.1 flare was observed at
09:00 UTC that began at 07:12 UTC. X-rays have been decaying
within B-class levels ever since. This would have been a good
candidate for the observed proton accelleration, but the time of
the flare does not coincide with the observed proton emissions.
Just as curiously, there are no other x-ray events prior to 06:00
UTC that were obviously capable of producing these enhancements.
However, Region 7585 is the only region on the disk with the
developing ability to accellerate protons. For this reason, it
is targetted as the source region.

Region 7585 may be capable of producing potentially influential
M-class flares. Although additional proton activity is questionable,
the current activity suggests it is possible, assuming this was the
source of the activity.

Radio communicators should be aware of the increased threat for
possible proton-related ionospheric anomalies over the next week.

This warning will remain active until 03 October when Region 7585
will have rotated behind the west limb.

** End of Warning **

2746. Re: FCC Preempts scanner laws for amateur transcievers

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-25 17:34:48 UTC
From: richw@mks.com
Message-ID: <1993Sep25.173448.16462@mks.com>
Source record: 275874

Despite the recent FCC ruling that state and local laws restricting the possession or use of ham gear under "scanner" restrictions are preempted by federal law, it is still possible that hams in some parts of the US will have to pursue the matter through the courts in order to get this preemption recognized.

In my former home state of California, for instance, the state constitution specifies that no state agency may refuse to enforce a state law or regulation on the basis of an alleged conflict with federal law or the state constitution, =unless= the state law/regulation has been struck down by a federal court or a state appellate court.

I wouldn't be at all surprised if similar provisions existed in other states.

Presumably, the best way to handle this issue would be for hams in areas where "anti-scanner" laws could affect them to approach their legislators and attempt to get the laws in question changed to conform to the new FCC ruling.

2748. Ramsey FX-440 Stuff

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-25 19:59:03 UTC
From: Cecil_A_Moore@ccm.hf.INTel.COM
Message-ID: <930925115903_4@ccm.hf.intel.com>
Source record: 275871

A whole lot of people have asked me for information on the Ramsey FX-440 kit. I don't know the answer to a lot of the questions so please give me a couple of weeks to gather additional data. I have all the necessary equipment to use to answer the questions, just not much time to spend making the measurements. But I will get it done and report the results here and post it to rec.radio.amateur.homebrew

73, kg7bk@indirect.com

P.S. I do not speak for Intel Corp. out here on Internet. cc:mail just has a better editor.

2749. Alpha Bravo Charlie Delta alphabets

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-25 20:12:05 UTC
From: bck1@cl.cam.ac.uk
Message-ID: <1993Sep25.201205.19093@infodev.cam.ac.uk>
Source record: 275873
Cross-posted to: alt.usage.english,sci.lang,rec.radio.amateur.misc

Here is a collection of alphabets of the Alpha Bravo Charlie Delta kind, variously known as radio alphabets, phonetic alphabets and spelling alphabets. There are a number of distinct ones for English, and also alphabets for:

French, German, Dutch, Flemish, Italian, Swedish, Finnish and Russian.

This posting supersedes the one of 11th August. There have been some additions and corrections.

My thanks to the many contributors, not all of whom get a mention below.

I can make no guarantee of accuracy of this information; indeed please send me any corrections or additions.

Comments in square brackets are my own.

Brian Kelk bck1@cl.cam.ac.uk
25 September 1993

***** ENGLISH *****

The NATO phonetic alphabet:

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

[The same alphabet, with the minor changes Alfa and Juliett, is approved by the International Civil Aviation Organisation and the FAA]

From a Swedish (also from a Dutch) telephone directory:

Alfred Benjamin Charles David Edward Frederick George Harry Isaac Jack King London Mary Nellie Oliver Peter Queen Robert Samuel Tommy Uncle Victor William Xray Yellow Zebra.

The ARRL (American Radio Relay League) version (1948):

Adam Baker Charlie David Edward Frank George Henry Ida John king Lewis Mary Nancy Otto Peter queen Robert Susan Thomas union Victor William x-ray young zebra

[also Adam Boy (?)]

From a book entitled "The Complete Morse Instructor..." (1944):

able baker charlie dog easy fox george how item jig king love
mike nan oboe peter queen roger sugar tare uncle victor william
x-ray yoke zebra

[This one seems to have undergone quite a lot of evolution,
with different branches of the U.S. armed forces using
different versions. Entries also cited: affirm, cast, hypo,
inter, negat, option, over, prep]

Sometimes used by radio hams:

America Boston Canada Denmark England France Germany Honolulu
India Japan Kilowatt London Mexico Norway Ontario or Ocean
Pacific Quebec Radio Santiago or Spain Tokyo United Victoria
Washington Xray Yokohama Zanzibar

[Much variation: Amsterdam, Brazil, Baltimore, Chile, Finland,
Greece, Guatemala etc]

From a Dutch telephone directory:

Amsterdam Baltimore Casablanca Danemark Edison Florida Gallipoli
Havana Italia Jerusalem Kilogramme Liverpool Madagascar New York
Oslo Paris Quebec Roma Santiago Tripoli Uppsala Valencia
Washington Xantippe Yokohama Zurich

[Perhaps 'international' more than 'English']

They must be pretty easy going in NB. I wrote my basic and advanced
tests, got my 2nd choice of call sign, and made it back to the car
before the parking meter ran out. I did phone ahead for an appointment
first; but the DOC ran a pretty efficient operation here in Winnipeg.
Is there any special reason a ham licence should take longer to
get than, say, a driver's licence ?

2751. Linear OK for Tech-plus?? (Answer)

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-25 21:41:20 UTC
From: rc@cmr.ncsl.NIst.GOV
Message-ID: <9309252141.AA29783@cmr.ncsl.nist.gov>
Source record: 275877

Doug, N0Y??, asks a few questions. Since I'm too lazy to type his LONG return address.. here goes for all to see.
He asks:
> Could somebody please clarify some questions about linear amplifiers for me?
me> I'll try.
> Here is more or less what I'm interested in having explained.
> 1. What exactly constitutes a linear amplifier?
me> An amplifier in which the output VOLTAGE is a constant multiple of the input voltage. In the ham sense, it is a power amplifier used after a SSB (or AM) rig to obtain more power output. FM and CW modulation does not require linear amplification to avoid distortion of the modulation with resulting unwanted sidebands. You will note that (older) "brick" 150 W amplifiers often had an FM-SSB switch. They were only "linear" in the SSB position, but with a loss in efficiency and probably gain; ie, they would have to dissipate more (get hotter) for the same output in the SSB position.
> 2. What specific class of license do you have to have to
> use one? I think it's general, but the texts I've studied
> from aren't totally clear.
> 3. I recently came across a design for "A 2-Meter FET Amplifier
> for Your Handheld" from the October '92 "73" 'zine. Is this
> legal for me to operate as a Tech Plus?
me> Technician-and-above classes of license have NO restrictions on the details of the transmitter. As long as your OUTPUT meets the rules, you can create it any way you wish. Technician licensees have FULL amateur privileges above 50 MHz, PERIOD.

Welcome and best wishes.

VK2SG RTTY DX Notes, 24 September
VK2SG RTTY DX Notes for week ending 24 September 1993 (BID RTDX0924)

Let me remind you of the CQ WW RTTY CONTEST, sponsored by CQ Magazine and RTTY Journal, which starts at 0000 UTC Saturday 25, and ENDS at 2400 UTC Sunday 26.

Received word from Bill, VK2EG stating that Syd, VK2SG is back in the hospital, no details are available at this time. We all wish a prompt get well and back home.

Our information this week came from CE3GDN, ZS5S, 9X5LJ, W2JGR, WB2CJL, KE6XJ, WA1MPB, W5KSI, VK2EG, I5ICY, IK1HSR, and NJ0M node of the Twin Cities Dx Packet Cluster. Thank you chaps.

Notes of Interest:

TT, CHAD. Al stated that he will be there for 3 more weeks and will be on RTTY every evening as work and band condx permit. He will also be back in Chad in November.

ZB2, GIBRALTER. Look for Gordon, SM4DHF during the CQ WW RTTY contest on all bands. QSL via his home call.

SV/A M. ATHOS. The laptop of Apollo cannot be repaired locally and will be shipped to Japan. There are actions to set up a new rig shortly, stay tuned.

E35X, ERITREA. QSLs of this operation are arrived. Do not send cards for DXCC credit until a date for accepting has been announced.

Don, CE3GDN Aplink is going QRT Sept. 28. From all editors many thanks for the good job done up to now and see you soon on the air. For that reason send your bandpass and notes for next week to Bob, WB2CJL @ W5KSI.#NOLA.LA.USA.NA or to WB2CJL @ I5FLN.ITA.EU.

With a Box closing a new one is coming up. Kent, SM4TFE, ex T5KJ,is now signing C91BG and will be there for some time and intends to operate an APLINK station soon.

furr@pilot.njin.net (Grover Furr) writes:
:
: The New York Times articles about the FCC's intentions to sell
: frequencies for commercial communications have NOT stated where these
: frequencies to be sold are in the spectrum. Nor have they mentioned
: the Amateur service in any way.
:
: Does anybody know what frequencies will be put up for sale and
: what, if any, the impact will be on amateur frequencies and requests
: (if any) for future freq allotments?
:
:
: *

Certain 14.313 MHz and adjacent frequencies
Certain 3.905 MHz and adjacent frequencies
Certain 7.258 Mhz and adjacent frequencies
Certain 28.325 MHz and adjacent frequencies

The impact of these folks moving to a frequency near you could be devestating. I recommend that we pull together and buy these frequencies and lease back the spectrum to the current occupants.

Seriously the current spectrum under consideration is the 1800 MHz to 2000 MHz or known as the 2 gig microwave band. While we are fighting for spectrum to put up yet another beep-boop two meter repeater, the Japanese have put up over 75 2.4 GHz amateur repeaters. The band does work. Once the commercial fellows find out they can make money on their investment they will want more spectrum. The two meg grab of 220-222 is nothing compared to what will happen to the amateur microwave bands.

2755. Re: Expensive application

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-26 03:04:00 UTC
From: steve.gross@cencore.com
Message-ID: <6e.204.332.0N6658F9@cencore.com>
Source record: 275785

Quoting Ed Hare:

>>Although, here is an idea for the ARRL to chew on (although you might
>>already do this...) How about as part of the PRB-1 information the
>>ARRL could include a list of licensed amateurs who are also lawyers
>>willing to handle PRB-1 cases?

>As a matter of fact, we do that. I am not 100% sure that it is included
>in the PRB-1 package, but we do have a Volunteer Counsel program,
>where attorneys who are familiar with the ham-radio aspects of law
>have registered with ARRL HQ. When one talks to Mr. Hennessee about
>a PRB-1 problem, he will certainly arrange for the correct referral.
>These "Volunteer" Counsels are not free, but they have agreed
>to do an initial consultation at no charge to hams on ham-radio
>related matters.

I have made the following suggestion to a couple of Division
officials, and have never received any kind of response, not even a
"What an idiotic idea!" so this seems like a good way to broach the
subject again.

I think it could be helpful to its membership if the League
maintained a list of licensed real estate agents who were also
licensed Amateurs. If nothing else, these agents would probably
understand why a ham might be more concerned about restrictive
covenants than the average home buyer, not to mention things like
HAAT, and at best they might even be able to direct the ham to
properties in areas where no such restrictions exist.

If a member were (considering) moving, they would contact the League
and get a list of any ham-agents in the desired area that had
registered with the League. What happens after that is between the
ham and the agent, the League's part in it is finished. The League's
function in this case would be to serve solely to maintain the
database.

Any thoughts? And no, I am not in any way connected to the real
estate industry. Unless you want to count those limited partnerships
I got suckered into in the 80's. :-(

2757. How to Measure Q

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-26 11:54:34 UTC
From: wvanhorn@magnus.acs.ohio-state.edu
Message-ID: <283vtq$30u@charm.magnus.acs.ohio-state.edu>
Source record: 275784

Advertisements by MFJ running in current magazines include their model MFJ-203 Dip Meter. The ad claims that one can "Measure Q of coils" using it. I have a grid-dip meter, but sure don't know how to use it to measure Q of coils. Can anyone enlighten me?

Yes, I know that in a parallel resonant (tank) circuit, if F(0) is the resonant frequency and F(H) and F(L) are the points at which the circulating current is down by 3 db. from that at F(0), then Q=(F(H)-F(L))/2*F(0); also that at F(H) and F(L) the current lags or leads the voltage by 45 degrees, respectively. But how can I measure either the circulating current or its phase with sufficient accuracy to be useful? Or what other effect am I missing?

Thanks and 73, Van - W8UOF

>(if any) for future freq allotments?

There's a total of 800 MHz of government spectrum up for grabs. This includes spectrum normally used by the military. Since hams share spectrum with military users in several cases, this is cause for concern. Currently, the spectrum immediately on the block is the 1.8-2.0 GHz section. This has no direct bearing on amateurs, but may have indirect effects since some of the current occupants may be evicted, and they will be looking for a new home.

>ever advertised on it but now (sniff, sniff) you can't get it anymore and
>will have to watch some OTHER channel because of that mean old ban on outside
>antennas. Might you be able to get THEM mobilized against the ban?

Here's the broadcaster's perspective. On one hand, cable has been
getting a free ride off of broadcast for many years by reselling
broadcast signals without compensating the broadcasters. On the
other hand, cable offers market penetration to broadcasters that
things like antenna restrictions have been foreclosing. There's
a good bit of talk in the broadcast business about shutting down
the transmitters in 5 years or so because so few viewers are now
getting their signals via over the air transmissions. Broadcasters
may soon be just another cable programing service.

The combination of cable channel competition and cable industry
fostered antenna bans has left traditional broadcasting in a
bind. Broadcasting is no longer the highly profitable mass
medium it once was. Cable has fractured the audience into small
narrowcast segments where carried broadcasters are now just one
of many programming sources. Indeed, the last few years have
seen the first case of a VHF network affiliate station shutting
down due to financial pressure. The networks themselves are
mere shadows of their former selves with massive cutbacks in
staff and funding for programming.

What all this means is that broadcasters are already against
antenna bans, and have been for many years. And, broadcasters
aren't the powerful force they once were, so their efforts aren't
as important as they used to be.

A linear amp may multiply voltage *or* current, or both. Normally,
in a constant impedance system we see both. But it's quite possible
to have an amplifier that has slightly less than unity voltage gain
while having considerable current (and power) gain. This is rather
common in audio amplifiers, less so in RF amplifiers.

In general, a Class A or B amplifier will have more gain than a Class
C amplifier at low drive levels. At higher drive levels, the gain is
usually about the same. Efficiency will be greater for Class C amplifiers.
Class D switch mode amplifiers are more efficient still.

>they will want more spectrum. The two meg grab of 220-222 is nothing
>compared to what will happen to the amateur microwave bands.

Or what has _already_ happened! The 1969 Radio Amateur's Handbook lists
the following allocations "up there":

420-450
1,215-1,300
2,300-2,450
3,300-3,500
5,650-5,925
10,000-10,500
21,000-22,000
All above 40,000

(all frequencies in MHz)

So far as I know (I don't have a recent _complete_ chart here), that's a
helluva lot more than we have now. As technology progresses in the areas
of better LNAs/LNBs, more perfectly formed dishes, lower-noise semiconductors,
etc., look for more and more to go away as commercial interests begin finding
the remaining frequencies interesting.

Source record: 275802

OA4LS and crew were heard on 49.92 MHz friday evening with loud signals via EME. Signals were up to 20 dB out of the noise at K6MYC. Other stations had much less SNR, apparently due to having their noise blankers turned on. The 800 PRF pseudo-CW transmitted by the Peruvians was clearly copyable w/o a noise blanker, but most listeners apparently lost SNR by leaving blankers turned on.

Jorge and his group are anxious to receive all reception reports; please send them to me and I will forward them to him. They anticipate more tests in October.

> the ban?

I've been snooping around the neighborhoods here in Northern Virginia posing as a potential buyer asking the associations here the same question. A few have said they will allow TV antennas, most say it's under consideration and others say they will not. Last week, WRC-TV (a Washington, DC station that did not opt for must-carry) did a story on how reception would be in neighborhoods at the edges of their coverage area using only indoor antennas or rabbit ears. Needless to say, the pictures weren't crystal clear. As one housewife in one of the more snooty (and restrictive) developments put it:

"We just can't have reception like THAT in a
neighborhood like THIS."

Pardon me, lady, would you have any Grey Poupon?

What I think will be most telling is how a recent case here will be used against the present restrictions. In a nutshell, the plaintiff wanted to install a satellite dish on his property and the association in his neighborhood said no. They argued that because the community did not forbid antennas on cars (AM/FM, cellular, amateur, etc.) and that one's car is legally treated as an extension of one's home, the community either had to do away with *all* antennas or permit the dish. The judge agreed and awarded $40,000 in punitive damages that wasn't even requested. I don't have the full details on the case, but I'll post them as soon as I have everything.

Meanwhile, October 6th is nearing, and I guess we'll see if the you-know-what hits the fan when "Days of Our Lives" is no longer available on the cable.

NEW RADIO AMATEUR PAYLOADS FLY!

HR AMSAT NEWS SERVICE BULLETIN 268.01 FROM AMSAT HQ
SILVER SPRING, MD SEPTEMBER 25, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-268.01

Radio Amateur Payloads Fly On ARIANE Launch 26-Sept-93 01:45:00 UTC

In what was a dramatic launch from the Kourou, French Guiana spaceport, with launch window almost closing, an ARIANE launch vehicle lifted off in the night to carry seven satellites to orbit. On board to give the "play-by-play" action was the AMSAT Launch Information Network Service (ALINS) which was on 75M with N8AJD and W5IU on 14.295 MHz. In support of othe ALINS was WD8LAQ at WA3NAN, the radio club of the Goddard Space Flight Center. Of these seven satellites, four are of general interest to radio amateurs. The following is a brief discription of each:

POSAT-1 is a 50 kg satellite built by Surrey Satellite Tecnology Limited (SSTL) of the University of Surrey, for LNETI (Portugal). Its mission is to receive and transmit earth images, determine its position using GPS, make radiation measurements, and receive and forward messages.

POSAT-1 :
Uplink : 145.925/145.975 MHz
Downlink: 435.250/435.275 MHz (435.250 MHz is the primary frequency)
Speed : 9600 bps (38.4Kbps probably)

KITSAT-B is a 50 kg satellite built by Korean Advanced Iinstitue of Space Technology (KAIST). Its mission is to take CCD pictures, process numerical information, measure radiation, and receive and forward messages.

KITSAT-B:
Uplink : 145.870/145.980 MHz
Downlink: 435.175/436.500 MHz
Speed : 9600 baud

EYESAT-A is a 12.5 kg was built by Interferometrics (USA). Its mission is experimental monitoring of mobile industrial equipment. It also carries an amateur radio payload which has the following frequenciies:

EYESAT-A:
Uplink : 145.850 MHz
Downlink: 436.800 MHz
Speed : 300 - 9600 baud

ITAMSAT is a 12 kg satellite built by AMSAT-ITALY. Its mission is to store and forward Amateur Radio messages like AO-16, LU-19, KO-22, and KO-23. Its transponder frequencies are as follows:

Downlink: 435.867 MHz (primary) PSK 1200 baud
435.822 MHz (secondary) PSK 1200 baud
AFSK 1200 baud (FM)
9600 baud (G3RUH)
analog transponder (FM)

Uplink: 145.875 MHz 1200 baud Manchester / 4800 baud
145.900 MHz 1200 baud Manchester / 4800 baud
145.925 MHz 1200 baud Manchester / 9600 baud /exper
145.950 MHz 1200 baud Manchester / 9600 baud

For a preliminary and "rough-cut" at the orbital elements, please insert these into your satellite tracking programs:

Satellite: EYESAT-A
Catalog number: 00001
Epoch time: 93269.08986300
Element set: 002
Inclination: 98.7470 deg
RA of node: 346.9000 deg
Eccentricity: 0.0010000
Arg of perigee: 216.9200 deg
Mean anomaly: 208.2700 deg
Mean motion: 14.29900139 rev/day
Decay rate: 0.00e-00 rev/day^2
Epoch rev: 2

Beacause all the satellites will be initially be "bunched-up" together, this element set will work for the first few days. Please allow plenty of time before the computed the AOS time to listen for these passes. As newer and more accurate elements become known, they will be published via the AMSAT News Service (ANS) bulletins. Also, please stay tuned to the AMSAT HF/VHF and look for ANS bulletins about the current status of theses new satellites.

UO-11 STATUS REPORT

HR AMSAT NEWS SERVICE BULLETIN 268.02 FROM AMSAT HQ
SILVER SPRING, MD SEPTEMBER 25, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-268.02

G0SXY/KO5I Reports That UO-11 Is Functioning

G0SXY believe that the UO-11 anomaly was caused by two factors (1) the gradual precession of the orbit plane to a position normal to the sun vector and (2) modifications to the FORTH software magnetorquing routines.

Over the course of its 9.5 year mission, UO-11's orbit has drifted. The satellite is now in a 6 AM 6 PM sun synchronous orbit. This means that the satellite is always in sunlight. It also means that gravity gradient lock is essential for good power generation. With the sun in the orbit-normal, some other quasi-stable attitudes have particularly poor power generation. During modifications to the ancient FORTH diary operating system, an incorrect sign inversion was applied to magnetometer data; this lead to non-nominal attitude, which lead to poor power generation. Eventually, the power system started to "shed loads" starting with the transmitters and moving to the computers. Hence the OBC 1802 and DCE NSC800 went down. Generally, one or the other of the computers is essential to being able to command UO-11, hence we were unable to command until the 2-meter beacon was automatically shut down.

Long-time UO-11 buffs will be interested to know that the spacecraft's new orbit plane makes the satellite warmer. This seems to have restored to operation an intermittant data detector circuit. It was the failure of this circuit shortly after launch in 1984 which lead to the 3-month loss of UoSAT-2.

The following is from UoSAT-OSCAR-22:

>From : G0SYX
To : ALL
Title : UO-11 Status Report
Keywords : UO11
Uploader : G0SYX
Uploaded : Tue Sep 21 10:31:42 1993

UoSAT-OSCAR 11 Status Report

Controllers at the University of Suurey have been successful in regaining command of the UoSAT-2 spacecraft. The command lost timer timed out at roughly 18:37 UTC on Saturday 18 September and during the next pass over the UK controllers were able to command the spacecraft to turn on its 70 cm beacon. An examination of telemetry showed that the spacecraft is in good health.

Because both the OBC 1802 and DCE aboard UO-11 had crashed leading to the inability to issue ground commands to the spacecraft, controllers will now have to begin the process of reloading the flight software into the flight computers aboard the spacecraft. This process will take several orbits to complete. In additon, key UoSAT operational personnel are currently involved in the pre-flight preparations for the Araine V-59 launch scheduled to take place later this week. As a result the process of reloading the flight software to UO-11 will be further delayed. Every effort will be made to return UO-11 to an operational state as soon as possible.

Once the spacecraft is returned to service additional operational activities are being planned for UO-11. Watch the UO-11 bulletins for further details.

G0SYX and the other controllers at UoSAT would like to express their appreciation to all those individuals who provided telemetry and reception reports to the UoSAT command team following the disruption of UO-11 service.

Later bulletins will be issued as more details become available.

[The AMSAT News Service (ANS) would like to thank G0SYX/KO5I who is part of the UoSAT Command Team.]

AO-16: Operating normally. [WH6I]

UO-22: Operating normally. [WH6I]

KO-23: Operating normally. [WH6I]

MIR: R0MIR has been pretty busy recently, since they apparently suffered solar panel damage recently in a meteor shower. They had an Extra Vehicular Activity (EVA) spacewalk, possibly two last week, and have another scheduled for Monday. Apparently, when they are preparing for EVA, they turn the radios off. They have been NOT heard on voice lately. When MIR is over the central and south the Texas area, R0MIR is on packet. In a recent chat with Sergei by N5JXS, and Sergi indicated that the EVAs that they are performing are not of an "emergency" nature, but are necessary repairs to the spacestation. Additional reports to me from N6JLH and N6WDV indicate good results on packet uploads from the West Coast, and the occasional voice contact when Alex sees who's connected. N6JLH, indicates that if you're sending private messages to the MIR crew, to keep them short, and to translate to Russian, if you can. Alex does speak pretty good English, but if it's in Russian, it's easier for him to read and answer. [N5JXS]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ W0LJF.#NECO.CO.USA.NOAM. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

AMSAT-NA Space Symposium Set For 7-11 OCT In Arlington, TX

Arrangements are being finalized for the AMSAT-NA Annual Meeting and Space Symposium '93. The proceedings are at the printers and the speakers list is full (30 Speakers!). The Saturday evening Banquet Program has now been arranged and will be very entertaining. There is still time to register. Call AMSAT Headquarters at (301)589-6062 for registration. Pre-registration deadline is 1 October. Hotel reservations can be made at (800)453-7909 or (817)640-4142. Be sure to mention you are with AMSAT.

If you are coming to the Surplus Store Tour on 7 October, please be sure to indicate this. If you are driving to Arlington and can help provide transportation for Thursday and/or Friday evening please so indicate.

This promises to be one of the best Symposiums yet so don't miss it. See you in Arlington, TX, 7-10 October 93!

STATUS ABOUT POSAT-1

HR AMSAT NEWS SERVICE BULLETIN 268.06 FROM AMSAT HQ
SILVER SPRING, MD SEPTEMBER 25, 1993
TO ALL RADIO AMATEURS BT
BID: $ANS-268.06

G0/K8KA Provides Status On POSAT-1 & HEALTHSAT

HealthSat-2 and PoSAT-1 are in orbit, operating nominally. These are the 6th and 7th SSTL-built microsatellites launched on the Ariane-4 ASAP.

The SSTL command station at Guildford (Surrey, UK) commanded HealthSat-2 transmitters on at 09:10 UTC this morning. PoSAT-1 was commanded on by the SINTRA command station (Lisbon, Portugal) during the following orbit at approximately 10:50 GMT. Telemetry points indicate that both satellites are in good condition. At 12:26 GMT ground controllers commenced loading the 80C186 on-board computer with software. The initial software load comprises the SCOS multi-tasking kernaland packet radio drivers (from BekTeK) and the SSTL microsatellite file system and housekeeping integration tasks. This software will allow controllers to schedule whole-orbit data surveys and other timed events. Following this basic software load, the Attitude Determination, Control and Stabilization (ADCS) software task will be loaded and initial manoeuvers will commence. The goal of the initial ADCS operation is to place the satellite into a very slow tumble prior to deployment of the gravity-gradient boom.

PoSAT-1 is an experimental satellite carrying both non-amateur and amateur radio frequency equipment. During commissioning, PoSAT-1 is operating on its non-amateur downlink; it is hoped that amateur operations will commence after initial satellite checkout. Portugese authorities allocated the PoSAT non-amateur frequencies below the European 430-440 MHz amateur band. Although the US amateur band extends as low as 420 MHz, no interference between PoSAT and terrestrial amateur communications is expected.

HealthSat-2 is an entirely non-amateur satellite operating in the WARC-92 "Little LEO" frequency bands. The satellite is owned by the organization SatelLife which will use it for store-and-forward communications in support of medical information exchange.

SSTL extends congratulations to Interferometrices, IT-AMSAT and KAIST on their successful V-59 microsatellite launches.

Further status reports will be issued throughout the day.

>India Japan Kilowatt London Mexico Norway Ontario or Ocean
>Pacific Quebec Radio Santiago or Spain Tokyo United Victoria
>Washington Xray Yokohama Zanzibar

>[Much variation: Amsterdam, Brazil, Baltimore, Chile, Finland,
> Greece, Guatemala etc]

Just for the record, the ARRL (following the ITU) adopted the
NATO/ICAO alphabet as its official standard many years ago, and
as far as I know still urges all amateurs to use it. Last I knew,
they specifically recommended against the much-varied geographical
list, for two reasons. First, it can cause confusion when working
international stations. Second, the amount of variation with which
it is used defeats the whole purpose of a phonetic alphabet, namely
standardization and easy recognizability under difficult conditions.

This is off the original topic, but I don't understand the feud between the cable operators and over-the-air broadcasters. Both need each other. The distrubition of the broadcasters adds value to the service the cable company is selling (i.e. cable subscriptions). Value is added to the service (i.e. advertising) the broadcasters are selling. Both the cable operators and brodcasters need each other to enhance the value of each other's product. The squabble must center around the ability of either party to adequately define the value of one to the other.

I received a letter from our cable carrier telling us they were dropping the local NBC and ABC affiliates as of October 6, 1993 because they don't want to pay the fees demanded by the broadcasters are demanding.

The ABC and NBC stations are running promos attempting to romance cable subscribers that life will be dark and ugly without their presence on the cable.

I don't have much problem with the broadcasters collecting fees for the programming. What I am wondering is if the cable companies will be able to sell local insert advertising to help them recouperate costs. I hope they can sell locals. I don't know the law, but suspect whether cable operators can insert their own advertisng is a factor of agreement between the parties and not a matter of law. Who knows; the stiutation seems to be stanger all the time.

SB DX @ ALLBBS $OPDX.129
Ohio/Penn DX Bulletin No. 129

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 129
BID: $OPDX.129
September 27, 1993
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AD1C, WA2TMP/7, WA3EUL, KU4J, K4CEF & Southeastern Cluster Group, KT5X and AH6IO for the following DX information.

3V8W, TUNISIA. Tim, KU4J, received a phone call September 23rd from Karl, DF2WV, and Karl has supplied the following information. Karl states he "WAS" the operator at 3V8W and he operated from July 23rd until August 15th. He made about 6500 QSOs in which only two were SSB QSOs to a couple of friends in Germany. Karl works for the Deutsche Aerospace, and they were installing some equipment in Tunisia. The operation took place from a military base and they would not allow SSB operations. Karl's license is good for a year and he and Baldur (and possibly others) are planning to return in November. He states that he has three pieces of documentation and has to resolve a few issues when he returns in November, so he has "NOT" submitted his documentation package as of yet to the League. Karl also mentions he was not in Morocco as reported in last week's bulletin and has not been there since 1970 as CN8/DK2WV. (ed. ?????)

9N, NEPAL. Jerry, UT4UZ, of Kiev, plans to accompany a Ukrainian mountaineering trip to Nepal. He will be leaving at the end of September and states he has the proper 9N1 papers already. Look for him during the month October running only about 200 watts.

BV9P, PRATAS ISLAND. Still no official word on when the BV0ARL/BV9P DXpedition will start. Rumors still indicate October 5th.

P4, ARUBA. Jorma, OH2KI, will be active in the CQ WW CW Contest as P40I. He will operating Single/Op on all bands. QSL via OH2KI.

ST, SUDAN. A station signing ST2/G4OJW was reported on 14062 kHz at 1951z, on September 24th. Not much is known about this station other than the station stated to QSL via Box 4016, Khartoum, Sudan.

V7, MARSHALL ISLANDS. Richard, AH6IO, will be active from Kwajalein Atoll from October 24th to November 2nd. He will be operating all bands with the call sign V73IO. QSL direct AH6IO's CBA.
Ken/KH6HH, Pat/NH6UY, Richard/AH6IO, Ken/V73C and Sam/V73A will be active during the CQ WW SSB Contest from Kwajalein Atoll. Call sign for the contest will be V7X. The QSL Manager for V7X will be KH6HH (use CBA).

VP2E, ANGUILLA. Jim, WB6CJE, will be active from here during the CQ WW SSB Contest as VP2ERN. He plans to run Single/Op on all bands.

VP2V, BRITISH VIRGIN ISLANDS. Tim, KU4J, informs OPDX that at least seven members of the North Alabama DX Club are planning to be active from here October 26th to November 2nd. They are also planning to be active in the CQ WW SSB Contest. Their exact call sign for the contest is unknown at this time, but is forthcoming. QSL will be via AB4JI.

XX9, MACAO. (Rumor of the week?) It has been reported that Martti Laine, OH2BH, who is now living in Hong Kong for the next two years, will be making a special trip, once a month, during a weekend to Macao.

YK, SYRIA. (UPDATE) Al, WA2TMP/7, informed OPDX that he is one of the proposed operators that was going to be active during the CQ WW DX Contest. Al states that the group will not be making a contest trip to Syria because of the short amount of time before the contest season. They need sufficient amount of time to get all the paper work and the equipment set up. Instead, the group has rescheduled their DXpedition to take place in the January/February timeframe for a regular operation that would last for about a week.

ZB2, GIBRALTAR. Jorma, OH2KI, will be active in the CQ WW SSB Contest as ZB2X. He will operating Single/Op on all bands. QSL via OH2KI.

ZD9, TRISTAN DA CUNHA. Bob, WA3EUL, talked to Roger, G3SXW/MM, on September 24th and Roger expects to be active Tuesday, September 28th. He will be using the call sign ZD9SXW. This operation will be CW only, and he will be active on 160-10 meters. He plans to be there for at least two weeks and possibly three weeks depending on transportation. QSL via G3SXW.

EDITOR'S NOTE. There will not be a bulletin next week (October 4th) do to personal commitments. Please keep sending your DX information.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

2772. Need info on FCC procedure

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-26 23:44:31 UTC
From: aross@jarthur.claremont.edu
Message-ID: <CDzJA7.I5L@news.claremont.edu>
Source record: 275804

I'm looking for info on the way the FCC handles license applications/tests
once they get them. I know someone posted a description a few months back.
Would that person care to pop up again? This is for a computer class;
we're investigating data flow, both efficient and government-related :)
The stuff I'm looking for would go something like this:
1) VE signs application, mails it in (takes 1 week)
2) FCC mail room sits on it (1 week)
3) Goes to some severely overworked/lazy guy (1 week)
4) Goes to a secretary to type in (1 hour)
etc.
793) Mail room sends it out to you

This is due by tuesday, so perhaps e-mail would be the best. And no, this
isn't the whole assignment. We have to do a lot more with this info.

Thanks in advance,
Andrew M. Ross

2774. plate choke for Kenwood twins

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-27 00:26:44 UTC
From: turner@safety.ICS.UCI.EDU
Message-ID: <9309261726.aa25486@Paris.ics.uci.edu>
Source record: 275806
Cross-posted to: rec.radio.amateur.misc,rec.radio.swap

Well, trying to bring my Kenwood Twins back to life, seems that some parasitics have destroyed the plate choke (and some wiring in there), and even eaten a HV board resistor.

Anyone have a manual that can tell me the value of R6 on the HV board? It looks like a 470 ohm wirewound, 5 or 10 watts. Also, anyone know much about replacing plate chokes? I will probably rewind the upper coil that got fried with similar wire and solder a connection. How critical are these values?

Anyone have a basket case pair of Kenwood Twins (T-599*, R-599*) or any remnants of either one? The plate choke from other similar rigs would probably do fine, the Kenwood TS 520* series, etc.

I use two golf cart deep cycle 6V batteries in series as a back up for
my station. At 220 ah they seem to be just fine. Does anyone have
any recommendations for an optimum recharge? Folks who use them for
golf carts just use a plain automotive charger.

Indeed. Don't hold your breath. Having private real estate covenants
declared void as against public policy because of an antenna
restriction is a bit of a jump. While racially discriminatory
covenants are easily voided, hams are not yet a protected minority
dispite our paltry numbers.

In article <randall.748888781@infmx> randall@informix.com (Randall Rhea) writes:
>
>We are living in a different era now. The deed restriction problem
>will not go away. It is very unlikely that any court or
>legislative body will make it go away. I'm not saying that's
>right, I am only saying it's reality.

A sad, but true commentary. This is the price of living in cities and on city size lots, not to mention condos and townhouses. As we live closer together, the desire to regulate "undesirable" activities by our neighbors increases. In most cases, the definition of "undesirable" will be measured by property values, not common sense. Hence the covenants and zoning will continue.

Our only real defense is good public relations. Few members of the public remember anything about disaster communications when they think your tower will affect their property, its value or their enjoyment. Ham radio's reputation as a "loner" hobby practiced by a few doesn't help. The media does not understand or show the desirability of the hobby either.

The primary reasons I partcipate in our local club are repeater support and public relations. Both are things I cannot do individually.

I'm fortunate enough to be on a fairly large city lot in a suburban environment with no real covenants or difficult zoning. While I've discussed the the Diamond X-500 on the roof with my immediate neighbors and gotten no negative reaction, my impression is that a fifty foot tower would not be welcomed. Frankly, when I bought this home fourteen years ago, I did not forsee my return to the hobby. I value my relations with my neighbors and community enought that I will not push the issue.

I also think I cannot overcome a host of negative reactions if I do proceed with a tower. Even my wife thinks a tower here would be unwise (talk about overcoming obstacles..).

My next home (after I get the kids finished with college) will be further out in the country with enough land to allow me to do what I wish without concerning my neighbors unduly. Part of that involves courtesy, part reality. All I can do now is hope I'll have enough money after I buy the house and land to afford a tower...

In the meantime, I have the club and a couple of friends shacks
to allow me to pursue the hobby...and I do some VHF stuff from
home, too.

>down by a federal court or a state appellate court.

I'm not questioning whether this is true---I don't have any problem
believing anything I hear about California, especially if it's something
really strange. :-) But I do have a question....

I'm no lawyer by any means, and I only took history/government classes in
college because they were mandatory, but I do seem to recall that without
exception, *ANY* state/local law that was in conflict with federal law
was supposed to be (more or less instantly) null and void. If I remember
right, this was, itself, a federal law. So wouldn't California's bit in
the state constitution be invalid? I mean, to go so far as to require that
any conflict between federal law and CA law be taken to court every time?
That seems odd, even for CA, especially considering the court costs that
the state of CA would have to eat in each and every case.

Just a bit confused....

I just recently got credit at RS when I bought a Pro39 Scanner, now
I'd like to also get a Ham Radio.
Can anyone out there make a recommendation on a Radio Shack Handheld unit?

Also, are these units easily-modifyable? If so, what freq. can be picked
up?

Thanks,
Gabriel

From what I can gather no modification is needed. Right out of the box the HTX-202 can receive 400,000 frequencies and the new htx-404(model number?) can pickup 3,000,000!!! What more could you ask for??

What do you know about the micor - is it 4f, 12f, or what? does it
have PL? The SP10 indicates it is not a standard micor - it's a
special of some kind. Do you have a book on it?

Source record: 275728

I apologies in advance if this is not the correct posting place, but I am new to this game.

I am going to a NASCAR auto race in two weeks. I want to purchase a scanner to listen to the drivers and pit crews. I know the frequencies for most drivers are betweem 460 and 470 and another range of 850 through 856.

Anyone have any suggestions on brand names / # of channels / costs / features / etc. for scanners I should look for? I do not want to spend more than, say, $ 300.00.

Please e-mail me at shodge@opus.freac.fsu.edu with any comments.

Thanks in advance

2787. Re: Cable TV and Broadcasters (was: local news)

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-27 12:22:16 UTC
From: jmiller@hack.afit.af.mil
Message-ID: <JMILLER.93Sep27072216@hack.afit.af.mil>
Source record: 275821

I tried to stir up the pot over on .policy with this, but nothing boiled :-). Looks like a similar discussion is starting over here, so what the heck... ;-)

Jeff

In article <JMILLER.93Sep23172432@rufus.afit.af.mil> jmiller@rufus.afit.af.mil (Jeff Miller, Homer Simpson's alter ego) writes:
In article <CDo86M.F31@news.Hawaii.Edu> bob@kahala.soest.hawaii.edu (Bob Cunningham) writes:

[Synopsis of Honolulu Advertiser stories of interest]

Local TV broadcast stations are broadcasting long "informational ads" trying to get more of the public on their side in their dispute with cable operators. The cable operators (Oceanic, et al) want to continue to carry the local network affiliates, and not pay them. Meanwhile, the TV stations, want $$$ from the cable companies in exchange for providing their signals.

Heh heh heh. Personally, I think the broadcasters should go pound poi. The CATV companies are doing them a favor by extending their signals into areas that they (the signals) wouldn't otherwise be able to reach. Heck, that *was* the purpose of the first CATV companies...put a good antenna on a hill to provide service to areas in "shadow". More viewers means a bigger market for advertisers; seems to me that the TV broadcasters ought to realize that (and that cable bandwidth ain't free, either!).

Having said that, I (and probably more than a few hams in Hawaii) would be rather tickled to see KHON, KITV, KGMB, KHNL, etc (did I miss any?) get into an extended deadlock over this. Should be quite interesting to see how loudly residents of Mililani Town (and all the other uppity "planned communities" which have prohibited outside antennas) complain when they can't watch their soaps, Oprah, etc., since the network stations are no longer carried on cable, they can't get a decent picture with rabbit ears, and outdoor antennas are forbidden.

What's that, you say? If you don't like the covenants, don't buy there? I challenge you to show me a community built on Oahu in the last 15 years which doesn't have anti-antenna covenants. I sure couldn't find one when I moved there in 1988.

BTW, watch your followups closely. I didn't think I would ever be able to xpost to alt.culture.hawaii and rec.radio.amateur.policy :-).

> 1. What exactly constitutes a linear amplifier?

A linear amplifier is one in which the output tube(s) or transistor(s) conduct for a total of 360 degrees. This type of amplifier is required ONLY when the input signal is amplitude-modulated; i.e., SSB, AM, etc.

> 2. What specific class of license do you have to have to
> use one? I think it's general, but the texts I've studied

Any class of license ... so long as you do not exceed the power limits of your license or band segment.

> 3. I recently came across a design for "A 2-Meter FET Amplifier
> for Your Handheld" from the October '92 "73" 'zine. Is this
> legal for me to operate as a Tech Plus?

Sure is so long as you are licensed for that band and the amplifier's output does not exceed the limits imposed on your class of license (believe that's 1500W PEP!).

> Please forgive me if some of these questions are a bit simplistic, but I've

These days, if the local or federal officials think you're doing something shady, it doesn't seem to matter to them whether it's legal or not. Read comp.org.eff.talk for a while.

>Either way, again, as long as you're not breaking the law, you have nothing

>about it. After all, if you weren't doing anything illegal, why would you
>be so secretive around law enforcement officials? Think about it....

Tell that to Steve Jackson Games. Tell that to the victims of Operation Sun Devil. People in the USA, land of the free, are getting stuff confiscated all the time and are often not charged with any crime (nor is the equipment returned in most cases). Sure, it's mostly BBS stuff, but I would bet if a BBS operator who was also a ham got "investigated" by the Secret Service, he/she would lose the radio as well as the computers with or without an FCC license -- especially if the computer & radio were connected together.

Local police are usually OK, since they have to live in the same communities as you and I and so are less likely to do something stupid (they still have to live with you and the neighbors). I think if the Feds are running some kind of investigation in your locale, though, it would be best to just take the radio out of the car until they go back to wherever. Remember, *they* don't have to live in town with you if they do something stupid.

Everyone knows their own locale best. If you feel it necessary to keep a low profile, it doesn't mean you're paranoid. If you think legality is your shield, you're probably right. Jim's comment (deleted) about volunteering the minimal amount of information necessary is a good one; if the officer is interested, invite him/her to the next club meeting or better yet, Field Day.

>not common sense. Hence the covenants and zoning will continue.

That's the reason I'd like to see more work done on designing antennas
that don't look like antennas. Much as we'd all perhaps like to have
a multiband beam and tower, the prevalence of CC&Rs, and the liklihood
that such CC&Rs are not going away, makes the market for such
non-antennas all that much better for any possible manufacturerer.

>Our only real defense is good public relations. Few members of
>the public remember anything about disaster communications when
>they think your tower will affect their property, its value or
>their enjoyment. Ham radio's reputation as a "loner" hobby
>practiced by a few doesn't help. The media does not understand
>or show the desirability of the hobby either.

That's true also, but reverting back to the original point, too many
folks don't even consider the emergency value...they just don't
want a neighbor with a tower or anything else that doesn't fit
their definition of what's acceptable for THEIR neighborhood.

I'm into antique cars too, and you should see some of the horror
stories that abound in the collector car periodicals. How'd you
like to come home and find your car towed away...even though it
was locked inside the garage, out of view??

>The primary reasons I partcipate in our local club are repeater
>support and public relations. Both are things I cannot do
>individually.

Likewise, stay vigilant on what is going on in your local community.
Get very nervous anytime you hear about local officials proposing ANY
type of property maintainence ordinance, etc.

Only problem is that _mostly_ (ignore buyers agents as a distinct minority and not available everywhere anyway) real estate agents work for the _seller_ NOT the buyer. When we were moving to the Atlanta area we simply asked the agent we were dealing with if she new about amateur radio (she did, a friend was one) and told her we didn't want any properties with antenna restrictions. But she could only deal with such things as were "known". I.e. it was impossible for her to know about all the possible covenants and restrictions and community and governmental and home-owners association restrictions, etc. Ultimately that kind of detail is up to the buyer. We did ask the sales rep in each development for any restrictions and they were all up front with us (talking about new sub-divisions here, so the builders rep could reasonably be expected to know). Where they had latitude to allow antennas, they gladly told us so; they wanted the sale after all!

I lied! I'm sure you've heard it a hundred times. I just passed my
Tech+ tests and am in the 8+ week wait for my license to come. While
I'd love to run out and buy a new unit to beat the price increases I
keep hearing about (after Sept. 30th?), I'm maintaining my staBiLiteeeeee......
until I can actually use the unit.

To save alot of repetition - Is there a FAQ or ftp site where I can
get information on the many transceivers that are available on the market
and their plusses/minusses?

I am primarily interested in getting a handheld to start with. I'm seriously
considering a dual band (2 meter/70cm) unit. I talked with someone who had
bought a Yaesu unit with which he was quite pleased (although much poorer).

Any information/anecdotes gratefully received. Ah well, maybe I should spend
part of the time studying for a General (13wpm hmmmmm). Meanwhile a'scanning
I will go.

Thanks,

association restrictions, etc. Ultimately that kind of detail is
up to the buyer.

Or rather, their attorney, who *is* reponsible for things that get
by him. An excellent reason for retaining one when buying real
estate, whether you care about antennas or not. A good idea to
have one on your team. Everyone else has one on theirs.

>may soon be just another cable programing service.

Wow! Hundreds of MHz free for the taking! Can't wait!

Seriously, I hope the ARRL and others are ready to propose new amateur bands if the broadcasters cease use of all that spectrum. Of course, in my opinion it's all totally wasted on TV at the present time, anyway.

>about it, either. Just politely and *RESPECTFULLY* explain things to them.

I _hate_ having to explain things to people with guns and try to avoid
anything that would put me in such a situation. Sometimes (it is only a
risk in any given case) they don't like what they hear, and things get
out of hand. (Remember Mr. King.)

>>4. _Never_ transmit where there is any possibility of any government

Well, that's the point. Someday they might, even though they haven't yet.
If they do, the cost to you can be _very_ high.

>>5. Don't talk about radio first. If _they_ ask, even though I tried hard to

>
>Either way, again, as long as you're not breaking the law, you have nothing
>to hide.

True, in the sense of concealing evidence of a crime. However, there are
many things I would rather not have to "explain" to an enforcer for reasons
given above. I choose to make these as inconspicuous as possible.

> Don't act like you do. In fact, I wouldn't be surprised if you
>actually attracted *MORE* attention by going to such great lengths to hide

>the fact that you have the radio than you would if it were out in the open
>about it.

Agreed one should never be _seen_to_ conceal anything from an enforcer.

> After all, if you weren't doing anything illegal, why would you
>be so secretive around law enforcement officials? Think about it....

However, what they don't see, they don't act on - so I don't put it where they are _likely_ to see it. The point is to _avoid_ attracting attention - to blend into the background. Note that most of my suggestions are to _refrain_ from doing something you might otherwise do that would attract attention - and how is the enforcer to know that has happened?

I think this problem extends beyond personal risk management. The last thing hams need is for enforcers generally, who already have begun to propose laws restricting use of some kinds of communication equipment, to notice ham radio in the course of their daily work - lest they add that to the list things we must give up for the war on ... Just another consideration to keep in mind.

All of the major ham magazines do monthly equipment reviews. These
are a good source of in-depth information about current rigs, although rigs
are introduced months before the review can appear in print.

Reprints of QST reviews are avaiable from the ARRL Technical Department
Secretary, or have been compliled into our Radio Buyers Sourcebook.
Contact the ARRL for info.

I have also seen CQ's Equipment Buyer's Guide, listing a brief description
and specifications of many pieces of ham equipment. Contact CQ for info.

A two-part QST article on selecting a rig appeared in February and April
QST. This is available electronically from the ARRL Automated Electronic
Mail Server (info@arrl.org). Send the following as text in a message to

These restrictive covenants are NOT unique to city-size lots. There are numerous 2-3 acre subdivisions in the Denver area that do not allow outdoor antennas of any kind. I know of at least one 35 acre subdivision that does not allow outdoor antennas ! The motto of these subdivisions seems to be horses, FB.....anything else, go to hell !

```
$SPEA3269A
SOLAR PROTON WARNING - 26SEP93
PACKET RADIO REPORT
SOLAR TERRESTRIAL DISPATCH
(PACKET: VE6MGS@VE6MC.#EDM.AB.CAN.NOAM)
(INTERNET: COLER@SOLAR.STANFORD.EDU)

ISSUED AT 18:00 UTC ON 26 SEPT:

The potential satellite proton warning issued earlier has been
cancelled. The region responsible for the earlier brief
enhancement in protons at greater than 10 and 100 MeV was
determined to originate from a source approximately 2 days behind
the southwest limb. No further enhancements from this source are
expected.

A new region now rotating into view on the northeast limb near
N12 has produced numerous minor flares of very long duration that
have been associated with moderate to strong spectral radio
bursts. Although it is too early to yet determine, there is some
concern that this region may develop into a possible proton flare
source. It will be watched closely over the next week.

** END OF PACKET WARNING (1/1) **
```

2808. Need good/cheap place to buy ferrite chokes

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-27 18:50:18 UTC
From: jlee@panix.com
Message-ID: <287cla$ie3@panix.com>
Source record: 275737

HI,

I've posted this in rec.audio/rec.video and did not have much luck. Maybe
I'll have more luck here.

Does anyone knows a good(cheap :)) mail order place to get ferrite chokes?
Radio Shack has the round cylindrical type for $5 and rectangler snap
together type for $8 (for 2).

I'll be using them for my stereo components'
connects and speaker wires(to cut interference), so they should probably be
at least 0.25" in inner diameter. I also have the catalog from Mouser, but
the ferrite beads they have are too narrow in diameter to let a wire thru.

Any suggestions/comments relating to this is welcome.

Thanks in advance.

Douglas J Renze (drenze@icaen.uiowa.edu) wrote:
: Could somebody please clarify some questions about linear amplifiers for me?

: 1. What exactly constitutes a linear amplifier?

It's a type of radio-frequency power amplifier. "Linear" means the envelope of the modulation is not distorted. "Modulation" means any of the various types of amplitude modulation such as AM, SSB and some of the digital modes.

: 2. What specific class of license do you have to have to
: use one? I think it's general, but the texts I've studied
: from aren't totally clear.

Any class of Amateur license may use an amplifier. You must of course keep within the power limitations of your license class. CB operators may not use external power amplifiers.

: 3. I recently came across a design for "A 2-Meter FET Amplifier
: for Your Handheld" from the October '92 "73" 'zine. Is this
: legal for me to operate as a Tech Plus?

I don't know the article, but it should be legal. There are FCC requirements on spurious and harmonic levels, but 73 magazine would not lead us astray, would it? :=) By the way, strictly speaking you don't need a "linear" amplifier for FM. Since FM has no amplitude variation, a class-C amplifier, which distorts the amplitude modulation wave shape, would work fine. Many "linears" designed for FM operation are in fact not linear. Just don't try to use them on SSB.

: not yet been clear to me whether it is a good/average/bad unit.
: It's on sale until 9/25 (tomorrow) for $199.95, and I need to
: make a decision about buying one.

IMHO it's a good buy at $200. Advantages: easy to use, excellent rejection of unwanted out-of-band signals, fairly small and light, good feature set (scanning, P/L, DTMF, etc.). Disadvantages: will not receive out of band, somewhat fewer "bells and whistles" than some other units.

Robert Carpenter (rc@cmr.ncsl.NIst.GOV) wrote:
: ... FM and CW modulation does
: not require linear amplification to avoid distortion of the modulation
: with resulting unwanted sidebands.

One minor nit: Some class-C amplifiers are non-linear enough to
significantly distort the turn-on/turn-off characteristics of a CW
signal. This can cause "key clicks" that interfere with nearby
frequencies. Something to watch out for.

: anyone enlighten me?

: ... Or what other effect am I missing?

I don't think you are missing anything. You can get a very rough
subjective estimate of Q by how deep the dip is on the dip meter.
But to say you can "measure the Q of coils" is a pretty far stretch,
even by advertising standards.

2817. WARNING: POTENTIAL MAJOR SOLAR FLARE WARNING - 27SEP93

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-27 23:29:49 UTC
From: oler@rho.uleth.CA
Message-ID: <9309272329.AA01507@rho.uleth.ca>
Source record: 275753

/\

POTENTIAL MAJOR SOLAR FLARE WARNING

ISSUED: 23:00 UT, 27 SEPTEMBER

/\

PRIMARY CANDIDATE FOR HIGH SOLAR ACTIVITY : REGION 7590 (E11E76@28/0000Z)

ESTIMATED POTENTIAL MAGNITUDE OF ENERGETIC ACTIVITY OVER NEXT 7 DAYS						
DAYS	C5.0	M1.0	M5.0	X1.0	X5.0	>X12.0
1(+)	100 %	60 %	30 %	20 %	5 %	1 %
3(+) G	100 %	80 %	50 %	30 %	10 %	1 %
5( )PG	100 %	90 %	60 %	40 %	15 %	2 %
7( )PG	100 %	95 %	70 %	45 %	20 %	2 %

NOTE: THE ABOVE ESTIMATES ARE BASED ON VERY LIMITED AND PRELIMINARY DATA
REGARDING REGION 7590. THEY WILL BE UPDATED (IF NECESSARY) OVER THE
NEXT DAY OR TWO AS THIS REGION MOVES AWAY FROM THE LIMB.

DAYS = Number of days (from present) into the future (1, 3, 5 and 7 days).
(+) = Primary candidate region expected to GROW and DEVELOP.
( ) = Primary candidate region expected to STABILIZE or remain STABLE.
(-) = Primary candidate region expected to DECAY and SIMPLIFY.
(x)P = Possible proton and/or PCA threat. (x) may be one of (+), (-), or ( ).
(x)G = If a favorable major flare develops, a moderate to high probability
exists that the event may be geoeffective.
xx % = Probability of activity equalling or exceeding the given x-ray class
sometime over the next number of DAYS.
WLT = Data not applicable due to the West Limb Transit of the target region.

The above chart should be used as a guide only. It represents anticipated
levels of activity based on current projections of region development.
Actual conditions may, of course, differ from these projections.

SYNOPSIS:

Region 7590 (N11E76) has rotated onto the northeast limb as a large
region in excess of 660 millionths. It is presently an FKO type group,
but may be reclassified as an FKC type group after the region moves away from
the east limb. Extremely intense Ca XV emissions have been associated with
this region over the last 3-days. This, together with the frequent flaring

and strong surging which has been observed from this region over the last 24 hours, illustrates the volatility of the region. Two M-class flares have erupted from this region over the last 12 hours, both reaching M1.8 levels. Tenflares, and fairly rich spectral radio bursts have also been observed with activity from this region as the group crossed over the east limb.

This region has the potential to produce possibly significant major flare activity. There is a moderate risk for X-class flares from this region.

More will be known after the area rotates away from the limb where analysis is difficult. This warning will be updated, as needed, when further information becomes available.

This warning will remain active until 09 October when it will be allowed to expire. Updates are forthcoming in the days ahead.

2821. Audio output/Freq low/Hamcomm PROBLEMS

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-28 00:14:13 UTC
From: white@ccsua.ctstateu.edu
Message-ID: <1993Sep27.191413.1@ccsua.ctstateu.edu>
Source record: 275749
Cross-posted to: rec.radio.amateur.misc,sci.electronics

Friends
I have a Kenwood R1000 communications receiver that I am trying to use with the HamComm CW/RTTY and JVFAX programs. I built the simple 741-based interface for the PC's serial port. Problem is that the programs require a signal of 500Hz-2500Hz, and my system is apparently delivering 100Hz.
Is there any way that I could boost the frequency?? I obviously am not well-schooled in electronics :(
The signal at 100Hz on the 'scope onboard HamComm follows the morse code that I can hear on the R1000's speaker precisely; I just need to nudge it up to 500 Hz. Also, tuning noise, etc will show up across the spectrum.
I have been advised to try to use the RS 1K ohm center tap - to - 8 ohm audio output transformer, but am unsure about how to hook it up (3 leads on the 1K center tap side, 2 on the 8 ohm side) and I also don't want to damage the R1000.....
Any help appreciated. A number of HamComm "attempted" users have admitted to having the same problem.
PS - I am considering purchasing the AEA FAX II, but am worried that I will have the same problem with that device... Opinions?

2822. Regenerating PL tones thru a repeater.

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-28 00:16:18 UTC
From: mladejov@ced.utah.edu
Message-ID: <CE1FF6.18u@ced.utah.edu>
Source record: 275767
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Hi
Looking for some net.wisdom on how to regenerate one of several PL tones through repeaters. I am building several VHF repeaters, each of which needs to decode one of several PL tones, let's say 100.0, 110.9 and 123.0Hz, and then if any of these three is detected (but not any other PL tone), it keys the transmitter, and enables the matching PL encoder so that the respective PL tone is passed out of the transmitter.

Obviously this could be done with three or more PL decoders, and three or more PL encoders at each repeater site. I am looking for a solution where there is one general-purpose PL tone decoder, which is capable of determining of what tone is being sent "on the fly" (like a period-measuring freq counter), which produces an output which says which PL tone is being detected. (Kind of like a PL "scanner").

I plan to interface this scanning PL decoder to a micro-computer, and key the transmitter only if the PL code matches one stored in a table. The regeneration could be taken care of by having the uP load a byte into the frequency determining register on a single gen-purpose PL encoder (ie, replace the dip switches with a latch).

So, anybody have any ideas on how do do this short of buying three or more decoders and three or more encoders per site? Alternatively, how about a source of lots of cheap PL decoders, or a cheaply-reproduceable chip-based PL decoder based on an IC chip.

Mike Mladejovsky, WA7ARK

The FCC has already proposed uses for the VHF TV spectrum after 2004
when commercial broadcast will shut down it's VHF operations and go
strictly to UHF HDTV. What some in the industry are hinting is that
it may not be cost effective to go to HDTV UHF transmission when the
time comes. Instead they may just rent transponder time and become
strictly cable channels.

Get rid of that darn Mickeyentosh!! 8-)

Well, failing that, find a copy of April 1992 CQ magazine and build the $15
J-pole antenna, ("Electricians Delight"). I built one substituting 1/2"
copper pipe for the aluminum rod suggested in the article and it works great.
(If you use 1/2" pipe you'll need longer screws for the clamps).
BTW, I also fed it differently because the capacitor in the article,(from
Rip Shack), is obsolete. Just run a rod up from the coax connector, parallel
to the short antenna element and make a clamp which you can slide up and
down to find the best match. A 14 inch rod will provide plenty of adjustment
range. If desired, once you find the correct length, you can make a one
piece rod of the correct length, with appropriate bends at the top, and
solder it all in place for a permenant electrical connection. That is why I
used copper materials.
I wound up with swr of about 1.1 at each end of 2 meters and 1.0 in
the middle. BTW, SWR on 440-450mhz is about 1.3 - 1.4. I think I'll build
another specifically tuned for 70cm.

: >they will want more spectrum. The two meg grab of 220-222 is nothing
: >compared to what will happen to the amateur microwave bands.
:
: Or what has _already_ happened! The 1969 Radio Amateur's Handbook lists
: the following allocations "up there":
:
: 420-450
comming soon a 449.000 wind shear radar unknown bandwidth
a 50 watt power limitation to protect military radars

: 1,215-1,300
now 1,240-1300 loss of 25 MHz

: 2,300-2,450
now 2,300-2,310 and 2,390-2,450 loss of 80 MHz

: 3,300-3,500
no loss

: 5,650-5,925
no loss

: 10,000-10,500
no loss

: 21,000-22,000

: All above 40,000
now moved up to 300,000 or 300 GHz
:
: (all frequencies in MHz)
:
: So far as I know (I don't have a recent _complete_ chart here), that's a
: helluva lot more than we have now. As technology progresses in the areas
: of better LNAs/LNBs, more perfectly formed dishes, lower-noise semiconductors,
: etc., look for more and more to go away as commercial interests begin finding
: the remaining frequencies interesting.

I'm not sure why you were advised to do this, but it will not help the
frequency problem.

>Any help appreciated. A number of HamComm "attempted" users have admitted
>to having the same problem.

I am also unsure of the whole story. I assume the 741 circuit is a
sharp filter and comparator to convert the on-off tones into on-off
switching. The best solution is to redesign the 741 circuit for the
lower frequency. If I am barking up the wrong tree, and you really
need to shift the frequency, one solution would be a frequency multipler.
You could overdrive an op amp to produce a square wave. Then wire a
filter at 500 Hz, the 5th harmonic of the 100 Hz signal. I bet it would
work well enough. But hopefully one of the hams on rec.amateur...
will understand the problem well-enough to provide a better solution.

2834. 2.4 GHz pre-amp w/ Mitsubishi series GaAs FET

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-28 05:39:58 UTC
From: crawford@eleceng.uct.ac.za
Message-ID: <crawford.47.749194798@eleceng.uct.ac.za>
Source record: 275765

Could someone please direct me to an article for a 2.4 GHz pre-amp based on the Mitsubishi MGF series GaAs FETs? If not available, I'll design one but I'd rather not "re-design the wheel" if I can help it.

Comments appreciated.

2835. Elliptical RF filters calculation program WANTED.

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-28 09:11:56 UTC
From: mapelp@pluto.sm.dsi.unimi.it
Message-ID: <288v4s$p55@pluto.sm.dsi.unimi.it>
Source record: 275768

Hi. I'm searching for a program who calculates elliptical RF filters
and possibly describes how to build it.
It's very important for me, so if you know where I can find it, please
mail to me as soon as possible.

MNY TNX and 73's. Paolo(mapelp@ghost.dsi.unimi.it)

2836. New license question

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-28 09:35:00 UTC

TO:drenze@icaen.uiowa.edu

DJR>A quick question about something that's confusing me. I just got my ticket
DJR>in the mail today. Under operator priileges, it sas "technician." On my
DJR>CSCE, it said I passed my exam and earned "Technician w/HF." My questions:
DJR>(1) Does the FCC differentiate on the Technician-class licenses between
DJR>Tech No-code and Tech/HF? (2) If not, or if so and my license is in error,
DJR>do I have to identify with the "/KE" when I use my HF privs? (3) If so an
DJR>there is an error on my license, whom do I contact?

The FCC knows, but nobody else knows unless you tell them. They do not
diferentiate on the license. You do not have to identidy with any
special designator.

2837. How to find the answers to frequently-asked questions about Ham Radio

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-28 09:44:04 UTC
From: ikluft@uts.amdahl.com
Message-ID: <ham-faq-ptr-1-749209443@uts.amdahl.com>
Source record: 275769
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

```
Posted-By: auto-faq 2.4
Archive-name: ham-faq-ptr

How to find the Rec.radio.amateur.misc Frequently Asked Questions list
------------------------------------------------------------------------

This article will tell you how to find the answers to frequently-asked
Questions (FAQ) from rec.radio.amateur.misc. The FAQ articles are posted on
the 7th of each month. This article is posted on the 14th, 21st, and 28th of
every month as a reminder of where to find the FAQ.

The FAQ articles are intended to summarize some common questions on the
rec.radio.amateur.misc newsgroup and Info-Hams mail list as well as to help
beginners get started.

Besides the monthly posting, the FAQ is always available via anonymous FTP
and from e-mail servers. This article contains instructions for obtaining a
copy of the FAQ. It also contains the table of contents from the FAQ so
that you know which questions are covered by it.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good
signal-to-noise ratio in the newsgroup. However, they can't do it alone - you,
the reader, have to use them. If you are a new user, please print and review
the FAQ articles and look at the instructions in the news.newusers newsgroup
before posting any articles. If you are an experienced user, please help by
refraining from answering frequently-asked questions on the newsgroup if they
are already answered by the FAQ articles. Instead, send e-mail to the user who
asked the question. (It will be helpful if you include the part of the FAQ
that answers their question, but not the whole thing.)

--How to obtain a current copy of the FAQ-----------------------------------

There are 3 ways to obtain a copy of the FAQ.
1) NetNews
2) Anonymous FTP
3) An Electronic Mail Server

Option #1: NetNews
------------------
If you are familiar enough with NetNews to look through previous articles on
your system, Option #1 above may be the easiest for you. The FAQ is posted
so that it should not expire from your site's news spool until the next one is
posted. Unfortunately, some news administrators do not honor the expiration
dates meant to preserve the FAQ.
```

Look in rec.radio.amateur.misc, rec.radio.info, rec.answers, or news.answers.
If the FAQ has expired at your site, try Option #2 (and ask your news
administrator to honor expiration dates for articles cross-posted to
news.answers if he/she can.)

Option #2: Anonymous FTP

Anonymous FTP uses the File Transfer Protocol. It is only available to sites
which are directly connected to the Internet. If you don't know how to use
FTP and can't find a friend to help you, continue to Option #3. If your site
is not connected to the Internet, you should also continue to Option #3.

The following sites have copies of the FAQ:
site name & address path to FAQ articles
------------------- --------------------
ftp.amdahl.com pub/radio/amateur/faq.[1-3].Z
located in western USA, FAQ updated daily
ftp.cs.buffalo.edu pub/ham-radio/faq_ham_[1-3]
located in eastern USA, FAQ updated monthly
rtfm.mit.edu pub/usenet/news.answers/radio/ham-radio/faq/part*
located in eastern USA, FAQ updated monthly
contains news.answers archive - most UseNet FAQs are here
grivel.une.edu.au pub/ham-radio/buffalo/ham-radio/faq_ham_[1-3]
located in Australia, FAQ updated monthly
(Ham files mirrored from buffalo/funet/ucsd daily)
nic.funet.fi pub/ham/info/faq_ham_[1-3]
located in Finland, FAQ updated monthly

Remember, when connecting to the remote system, use the login name of
"anonymous" and, as a courtesy to the site administrators, your e-mail address
for the password.

Option #3: Electronic Mail Server

If you can't use Options 1 or 2, your only remaining option is electronic mail.
You can retreive a copy of the FAQ by sending a message to
mail-server@rtfm.mit.edu

The body of your mail will contain a command for the mail server software.
To get all of the FAQ (consisting of 70K of e-mail in 3 parts), place the
following in the first line of your message:
send usenet/news.answers/radio/ham-radio/faq/*

Leave out the subject of your message because the mail server will ignore it.

--- begin sample mail message ---
To: mail-server@rtfm.mit.edu
From: me@here.org
Date: Mon Aug 14 22:27:33 PDT 1995

send usenet/news.answers/radio/ham-radio/faq/*
--- end sample mail message ---

QST de W1AW
ARRL Bulletin 99 ARLB099
>From ARRL Headquarters
Newington CT September 24, 1993
To all radio amateurs

SB QST ARL ARLB099
ARLB099 IARU Executive committee

Five new IARU Region 1 Executive Committee members were elected
September 24 at the IARU Region 1 Conference, held the week of
September 20, in Brussels, Belgium.

ARRL Executive Vice President David Sumner, K1ZZ, in attendance,
reports that the five new members are: A. Razak Al-Shahwarzi, A41JT;
Vincent Magrou, F5JFT; Jari Jussila, OH2BU; Hans van de Groenendaal,
ZS6AKV; and Mustafa Diop, 6W1KI.

Four Region 1 Executive Committee members remain for another term.
They are: L.v.d. ''Lou'' Nadort, PA0LOU, chairman; Wojciech Nietyksza,
SP5FM, vice-chairman; John Allaway, G3FKM, secretary; and Rossella
Strom, I1RYS, treasurer.

The Committee members will serve for the 1993-1996 term.

Not so hard for me, although an HF rig wedged between the seats is a
BIT obvious to the uniformed dude peering in the window... ;^)
>
> 2. Conceal the antenna.
Interesting ploy...HOWEVER, since I HF mobile, hiding a Texas
BugCatcher is NOT so easy, and clandestine is not possible!
>
> 3. _Never_ have the radio turned on (RX or TX in use)
I wear a boom mike with a headphone for hands-free (sorta -- I still
have to PTT with a thumb switch) so *that* too is kinda obvious!
>
> 4. _Never_ transmit where there is any possibility of any government
> agent being able to hear anything on _his_ radio (desense, spurs)
> that might cause him to look around and _see_ me.
How in the hell do you SEE them first? There isn't much on 146Mhz that
is so critical I can't wait to TX, but in a pile-up on 20 meters,
trying to work ZA or VK9 or... Hah! Let a cop get in the way? Nah! ;^)

> 5. Don't talk about radio first.
They *ARE* going to ask about the antenna system. It is HUGE and
hardly unobtrusive...

Actually, I have found that by being *SO* obvious, I become invisible,
and most of the gendarmes along my usual travels pay FAR more
attention to motorists doing crazy things like speeding and weaving
than to someone doing the speed limit, staying in her/his own lane,
even dragging a monster vertical on the car and yakking into a boom/
headset! ;^) Be obvious...keep a low profile that way! ;^)

2840. 6-meter EME test from Peru

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-28 11:45:23 UTC
From: MOWE%SLUMUS.BITNET@CUNYVM.CUNY.EDU
Message-ID: <28SEP93.08377199.0009.MUSIC@SLUMUS>
Source record: 275774

Al, N1AL, asked about K6MYC's antenna: It's 4 of (his) M2 7-el jobs, with Az/el. W6JKV was using 16 (!) of them.

The OA4LS station was running 1 megawatt peak power (200 PRF, 300 microseconds pulse length) for an average power of about 60 kW. Yes, 60 kW. That kind of power into an antenna with 43 dBd gain should have been VERY loud (even if you mistakenly left your noise blanker on). I suspect that they were fairly weak because perhaps the Moon wasn't exactly within their 1 degree beam. Dunno. More tests are planned, probably w/in the ham bands and using CW.

PLEASE - if you listened for OA4LS, let me or Jorge know. Even if you heard nothing, that's information that he needs. Times, antennas, etc. Thanks -

2841. Re: Need good/cheap place to buy ferrite chokes

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-28 11:55:45 UTC
From: ehare@arrl.org
Message-ID: <2311@arrl.org>
Source record: 275772

In rec.radio.amateur.misc, jlee@panix.com (John Lee) writes:

>Does anyone knows a good(cheap :)) mail order place to get ferrite chokes?
>Radio Shack has the round cylindrical type for $5 and rectangler snap
>together type for $8 (for 2).

The RS round cylindical type does work well, but you might need a LOT
of them. In general, you need about the same number as you would need
to make a bead balun for an antenna. The ARRL Antenna Book demonstrates
that 50 (!) beads has an impedance ranging from about 750 ohms to
1500 ohms over the HF range. At $5 a pop, that is quite
a bit of money. Unfortunately, many people are buying one or two,
trying them, and deciding that a common-mode choke will not work.
I have heard mixed reports about the rectangular one; some say it worked;
other say it didn't. If you try one, make sure to use more than just
a few turns. I suggest about 10 to 20 turns of wire, speaker wire
or coaxial cable (you might need more than one).

The best use of ferrite to suppress common-mode noise or interference
is to wind about 10 to 20 turns on a ferrite toroid. #43 material is
the best all around, although for the lower end of the HF range, #73,
75 or "J" might work best. #63 is best to supress VHF signals.
If you go to your junk box and find a toroid, it may not be the right
material. Using the wrong (or unknown) material is the usual reason
when a common-mode choke doesn't work.

The ARRL book, Radio Frequency Interference -- How to Find It and
Fix It discussed ferrite and other noise/interference filters in
depth. A good start of information about interference is found in
the ARRL Technical Information Service EMI/RFI Package (also available
as EMI-GEN and EMI-SOURCE from our mail server (info@arrl.org).

For your application, I recommend using an FT-140-43 core. Try also
TCE Labs model SP-1 speaker-lead interference filter (See list at
end of this post.)

To answer the original question, here is the list of ferrite suppliers
(part of EMI-SOURCE and the EMI/RFI Package).

From the files of the ARRL Automated Mail Server, (info@arrl.org):

>even by advertising standards.

Well, if the dip meter has a trustworthy dip indicator, and has a
drive port for a frequency counter, you can get Q by knowing that
Q=Fo/BW where Fo is the frequency of maximum dip and BW is the
width to the 3 db points on either side of max dip. For example,
if dip occurs at 1 MHz and the dip indicator shows a 1/2 power
change at +/- 10 kHz, then the Q is 50. Obviously you need to
use a high Q capacitor across the inductor to achieve resonance.
Normally the capacitor's Q will be high enough that only the
Q of the inductor is being measured.

Call Gettysburg, or the ARRL, and get a form 610. Fill it out with
your change of address and mail it to the FCC. You're required to
do that anyway, and the Callbook folks get their information by
purchasing copies of the FCC database.

>
>Only problem is that _mostly_ (ignore buyers agents as a distinct
>minority and not available everywhere anyway) real estate agents
>work for the _seller_ NOT the buyer.

Actually, you'd be even more correct in saying that the real estate
agents work for themselves. The agents will do whatever they can
to gain the sale. If that means leaning on a seller to come down in
price because the agent knows you (the buyer) want a certain house, but
won't go above a certain limit, that's what the agent will do.
Bottom line for the agent is...no sale = no commission.

> When we were moving to the
>Atlanta area we simply asked the agent we were dealing with if
>she new about amateur radio (she did, a friend was one) and told
>her we didn't want any properties with antenna restrictions. But
>she could only deal with such things as were "known". I.e. it was
>impossible for her to know about all the possible covenants and
>restrictions and community and governmental and home-owners
>association restrictions, etc. Ultimately that kind of detail is
>up to the buyer.

Frankly, I'd have gone to another real estate office. If the agent was
too lazy to research the properties to verify they met your needs...no
restrictions, then she really couldn't want your business that much.
Certainly, the final determination as to there being no restrictions rests
on the buyer AND the nuyers attorney, but if your contract of sale
contains a clause which voids the contract if there is/are restriction(s),
then the real estate agent will be much more selective in what she shows
you initially.

> We did ask the sales rep in each development for
>any restrictions and they were all up front with us (talking about
>new sub-divisions here, so the builders rep could reasonably be

>expected to know). Where they had latitude to allow antennas,
>they gladly told us so; they wanted the sale after all!

As above, I wouldn't trust anyone's word alone. I'd be sure to have
it stipulated in the contract of sale.

>well-schooled in electronics :(

I'm not sure I understand your problem. If you want a tone of a particular
frequency, just tune the radio until that frequency tone comes out.
Somehow that sounds too obvious, so you must mean something else.

>The signal at 100Hz on the 'scope onboard HamComm follows the morse code
>that I can hear on the R1000's speaker precisely; I just need to nudge it

>the 1K center tap side, 2 on the 8 ohm side) and I also don't want to
>damage the R1000.....

Are you saying that no matter what frequency you tune the radio to, you
always see 100 Hz on the spectrum display? If so, your interface circuit
is falsing, perhaps due to a ground loop. This thing works by counting
zero crossings. It sounds like what you're getting is modulated AC hum
into the interface. What people are telling you about the transformer is
that you want to use it as a step up transformer to match the speaker
output to the 741 circuit. To do that, you hook the 2 leads on the 8 ohm
side to the speaker terminals of your radio, and the outside two wires on
the secondary side to the 741 circuit. If you do this, you'll break
any ground loop that may exist between your radio and your interface. This
is a good thing. You'll also boost the voltage seen by the 741. You should
be careful not to run the volume too high on the radio when you do this
or you can overdrive the chip. You won't hurt your radio by doing this.

No, the FCC doesn't differentiate between Tech and Tech w/HF. You have to keep your CSCE forever, or until you upgrade again, to show that you have HF priviledges. The VEC has a record of your CSCE and the FCC will query them if they have a question about your HF operation.

>about a source of lots of cheap PL decoders, or a cheaply-reproduceable
>chip-based PL decoder based on an IC chip.

Well multiple decoders will give the fastest response time, but you
can program the microprocessor to *scan* the input by writing the
proper bit sequence to the decoder's dip switch. The only down side
to this is that you have to scan relatively slowly to allow the
decoder time to lock on any particular PL. This is a good application
for DSP. A FFT of the 50-150 Hz region of incoming audio will show
what PL is active. You might even get away with a simple zero crossing
detector following a low pass filter with a cutoff around 150 Hz.
Just do a period count, several times to avoid falsing, with the
microprocessor to determine the frequency of the incoming PL.

I have noticed that there is a trend of late. "ICOM" is spelled

I-C-O-M.

KENWOOD is spelled

K-E-N-W-O-O-D

ALINCO is spelled

A-L-I-N-C-O

while, on the other hand, 4 out of 5 users of ham equipment say

YAESU is spelled

Y-E-A-S-U or Y-A-S-E-U or Y-A-S-U-E

Look people, it's a guy's name, and I'm sure when he named the company,
he pictured people spelling his name right...

Y----A----E----S----U.

Yes, I'm nit-picking, no, I don't intend any hard feelings, and if I cause
any, it's because you realize you haven't been spelling it right and you
don't like people correcting you.

Guess I'll go hop into my Crysler :-) and go for a ride.
Anyone have a Cheby :-)?

>Ed Schaefer K9JMA ham radio N97178 aviation

In another post, someone also suggested not be as worried about local police as they might be of federal officials. They suggested if the feds were in the area to avoid attention until they were gone. That's fine, but you're not likly to even know the feds are in your area. Federal investigations don't exactly announce their presence to the public.

As to Ed Schafer's comments above, I don't see any real threat from the police because of ham radios. The CB crowd went through a spurt of police over enforcement when CBs first came into widespread use, but that's all disappeared. 15-20 years ago there were numerous stories of police stopping cars with CBs and "allegedly" charging the driver with violation of some law/police interfearence for broadcasting the location of a speed trap, etc. To the best of my knowledge, the final outcome was dismissals because there's no way to prove the transmission over heard by a cop originated from any individual vehicle (sure, with sophisticated equipment it is possible, but not if the only evidence is the cop heard somebody broadcast his location on channel 19 and "assumed" your vehicle was the source..)

Frankly, some of the reasons behind the unbridled power as exercised by some police is the fact that we, the public, fail to confront the abuses. We take a "let someone else do it," position.

That's fine for those that choose to live their lives in such a state of fear, I'll not sit idly by and let that happen to me. Before we changed the scanner law in NJ, it was a technical violation, even for a ham to have an extended receive 2m transceiver in a car. I did it all the time, and I would have gladly been a test case if necessary. That's why we have organizations such as ARRL to turn to. In fact,

during the push to overturn the old NJ scanner law, we had a ham
being prosecuted for violation of the law. He was represented by
a volunteer counsel, and if costs were to be off set, I'd have happily
donated to the defense.

Anyway, to each his own. If, despite your legal right to do so as a ham,
you choose to operate in a "low profile" mode, that's your right.
For me, and I hope many others, I'll not shy away from doing that
which I'm legally permitted to do because of fear of the police.

2853. New Products Announcement: BFH-1 & BFH-2

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-28 13:41:59 UTC
From: sales@guinea.com
Message-ID: <10277.2501@guinea.com>
Source record: 275697
Cross-posted to: rec.radio.amateur.misc,rec.radio.cb

GuineaCrafters is pleased to announce the availability of two new
products which will be of invaluable use to the amateur community:

BFH-1 & BFH-2

The BFH series utility devices are a generic-purpose troubleshooting,
diagnoisis, and problem-solving tools. Perfect for those hard-to-figure-
out problems, the BFH devices are able to easily find your problems
and solve them with a minimum of effort on your part. Better than an
oscilliscope, spectrum analyzer, frequency counter, and signal
generator all wrapped into one, the BFH series utility devices allow
you to solve all problems without carrying around a large quantity of
bulky test equipment.

BFH-1: For applications above 140mhz, where delicate finesse is
required. Will work with all equipment from 140mhz through 25ghz.
Specifically designed with surface-mount technology in mind.
(Dim: 12"x6"x1", ship. wt. 2lb. Amateur cost: $24.99)

BFH-2: For applications below 100mhz, where bulk is more important than
finesse. Great for solving all those tube amplifier problems,
or just plain fixing a roller-inductor tuner. Can even be used
to verify that those PL-259's are on nice and snug! No more
water contamination problems!
(Dim: 15"x8"x1.5", ship. wt. 4lb. Amateur cost: $44.95)

For additional information (i.e.: spec sheets, etc.) feel free to contact us
via e-mail.

GuineaCrafters, Inc.
Made With Italian Pride...

It all depends on how the exams are processed.

When my wife took her Novice, the form was mailed directly to the
FCC in Gettysburg. She had her ticket less than a month later. The completed
610 was mailed on May 27th, and she had her license in hand on June 21st.
(It had been processed around June 18th).

Contrary to statements made, I believe the inefficiencies are within the
VEC system, not within the FCC's processing. All that paperwork must be
checked, your name and address entered into a computer so your name can
be sold to HRO and AES, and *THEN* your upgrade paperwork gets forwarded
to Gettysburg.

How are you deciding that it is delivering 100 hz? Is that what the
spectrum analysis mode of the hamcomm software is showing? How did you
get the 100 hz number for starts? Any chance that it is 120 hz hum coming
from the receiver or some power supply?☐☐☐.

Second, what happens when you tune the receiver. If you are in spectrum
analysis mode, you should see the frequency of the cw or whatever moving
up and down as you tune back and forth. Normally, you would tune the
receiver until the tone of the desired signal moved into the window
needed by the decoder - that's what the tuning indicators on the various
multimode TNC's are for, and hamcom lets you use the spectrum analyser
mode to get in the ballpark (and generally see what is going on - it's
pretty neat). You generally want to tune CW to about 800 hz or so.
Hamcomm lets you move the frequency of the decoding window around some if
I remember right. (and in fact, you probably can move it down to 100 hz,
but you shouldn't need to)

>The signal at 100Hz on the 'scope onboard HamComm follows the morse code
>that I can hear on the R1000's speaker precisely; I just need to nudge it
>up to 500 Hz.

Sounds like you just need to tune the radio. I'm not familiar with the
R1000, but I don't imagine that you have the narrow cw filter centered on
100 hz, probably more like 800 hz.

>Also, tuning noise, etc will show up across the spectrum.

Which is a good sign that the hamcom software and converter are working
properly - if you get indications of frequencies up to 2.5 khz or so,
then you should be able to tune the cw up into the 700-800 hz range,
which is where most people like to hear it. The hamcom circuitry allows
you to move the frequency at which it decodes around some too if I
remember (I just lent it to a friend to try rtty , so I don't have it
with me) so you can put it where your receiver works best if you have a
narrow filter.

>I have been advised to try to use the RS 1K ohm center tap - to - 8 ohm
>audio output transformer, but am unsure about how to hook it up (3 leads
on
>the 1K center tap side, 2 on the 8 ohm side) and I also don't want to
>damage the R1000.....

You'd put the 2, 8 ohm leads to the R1000's earphone jack, and the 1 k leads to the hamcomm unit (any two should work but you want the outside ones, not the CT), but you shouldn't need to do that. The r1000 should have plenty of drive, hamcomm only needs about 100 mv to work right. The transformer won't do a thing for changing the frequency, what it will do is step up the voltage - but you shouldn't need it. In fact, if you are copying stuff at 100 hz, you obviously have enough signal. I'd forget the transformer.

>Any help appreciated. A number of HamComm "attempted" users have admitted
>to having the same problem.

Hmmm, ran the first time for me. I've got version 2.1 and just downloaded 2.2. RTTY seesm to work fine, the spectrum analyser function is really interesting on a fast machine (not so hot on a 4.77 lcd laptop, but what the heck). How fast is your computer? Are you sure you have the ports set right? You are trying to copy the cw with a BFO set on, right?

Here's a test. Connect up the system and find a strong carrier or cw signal that you can get a beat off of. Set hamcom to spectrum analyser mode. Now tune across the signal slowly and take note of the lowest and highest frequencies that hamcom shows. The signal should swoop up or down (depending on which way you are tuning) from maybe 100 hz to maybe 3000 hz, depending on how tight the filters in your radio are. Do this test with the BFO on (cw/ssb reception, not am)

>PS - I am considering purchasing the AEA FAX II, but am worried that I
will
>have the same problem with that device... Opinions?

Sounds like just being unfamiliar with the equipment and needing a little explanation of how to use it right. You might have something wrong in the 741 circuit, but it's pretty simple - all it does is square up the incoming signal so the computer can count the zero crossings easier. But double check it anyway. Then let us know what you get with the above check.

I think your R1000 should work fine with any of these systems as long as it can tune in 100 hz or smaller increments and has a BFO.

FWIW.

Well, that's *technically* correct, but an amp that conducts for 360 degrees is *very* inefficient. Usually hams use the term 'linear' to mean amplifier of any type, and most 'linears' are class AB or B and/or push-pull, and rely on filtering to remove the distortion from the signal. (check out the moto app notes on 'linear' amplifiers - biased to quiessent current of 20ma and putting out 50 or more watts is *not* class A!)

Aggreed on the rest of the posting...

Here's the scoop..

Here at work we're putting in an aircraft HF comm ground station. A few weeks ago, there was a posting here about a 6-30 MHz log periodic for sale and management agreed it was a wonderful idea and gave the HF guys the go ahead to procure the antenna. that's in process - so far so good.

New problem. We're going to need the serious rotator for the serious antenna (antenna is a Hy-gain LP1017C i believe and calls for something like the Hy-Gain 3501 rotator).

Should you, the reader, have such a beast available or can point us in the right direction, Ray Adams, K7MLE, at Collins Commercial Avionics in Melbourne, FL, would like to hear from you. Normal business hours are 7:30-4 ET.

Phone is (407) 768-7049 (xfers to secretary after 4 rings) or you can try e-mail at rfa@dllws.cca.cr.rockwell.com or rfadams@crems.cr.rockwell.com. (things have been a bit strange on intersystem e-mail lately...that's why i'm posting this.) Street address for snail mail is:

Awwwww Gary, you always have to be so technical..... here's how an appliance
operator would do it....

What this guy needs is a Community Repeater Panel. He didn't say whether or not it would be on the ham band...and chances are, if he's checking a list or something with a computer, he's interested in billing, etc...most likely, he's putting up a community repeater, or maybe a GMRS machine and he's selling tones on it. Anyway, Zetron and Communications Specialists both offer what he's wanting. You can program any number or tones for access and restrict many others...plus it has phone patch options, etc. The Zetron is very similar..... check those out, they might be what you're looking for.

: : All above 40,000

: now moved up to 300,000 or 300 GHz

Bob,
I wish it were *only* as bad you said. You forgot that 902-928 (our fairly recent "gift" from the FCC), 2.4 and 5.7 all got lumped into ISM and are now "computer CB". They are effectively unusable for some important applications. Also, the GHz at 21-22 got reduced to 250 MHz at 24-24.25.

I'm personally feeling the effects in a big way. The dozen 256 kbps digital radios I built and (partially) deployed on 904.5 MHz now appear to be unusable due to trash generated by Part 15 and other junk (sorry, my bias is showing) devices which have come on in the 2 years since I first began testing.
I'm now scrambling to find alternate sites and paths which don't have to run through what has become a cess pool through the middle of the SF Bay area. And wind profilers & Automatic Vehicle Location haven't even come on line yet!

Currently, my digital links which would otherwise operate just fine, are having their packets blown apart by a 130 microsecond dwell, frequency hopping link of some kind. There's no question of the need to go to spreading and FEC now to make hardware work well in this environment. Unfortunately, I'm out of funds and energy to rebuild things.

I knew the band was short lived but I was hoping that we'd get a little more life out of it. In hindsight, I probably should originally have put all of the radios on 1240-1300 MHz but the factor of 30 difference in power train component cost was *so* enticing.
I think I can survive the 1 watt, omnidirectional Part 15 wireless LAN telephones and that sort of stuff since it is relatively low ERP but whatever the link is I'm seeing is a big signal; -60 dBm or worse.

The shared 60 MHz at 1240-1300 is about our last hope if we want a wide area mid/high performance amateur network in our lifetime. That and 10 GHz

are goldmines. Once again, amateur radio is dependent upon the military to keep us from losing some of our most valuable resource. Shades of 1914. As Yogi Berra might say "It's deja vu all over again".

From: tomb@lsid.hp.com
Message-ID: <CE2r3J.ArK@hpcvsnz.cv.hp.com>
Source record: 275698

To measure the Q of a tank, you can't expect to simply monitor the dip meter's deflection. The deflection depends heavily on coupling between the tank in the dip meter itself and the tank under test. Besides, the meter movement on the dip meter is not necessarily measuring "half power points" when it drops to half of the "normal" reading.

A way that you could use the dipper to get a decent estimate of Q: arrange the dipper to have a fixed position with respect to the tank being measured; arrange to monitor the dipper frequency (or for low q, the dipper dial may be fine). Couple the dipper to the tank _lightly_. Monitor the RF voltage across the _tank_being_measured_, with a circuit which won't load that tank significantly (tough, if the Q is high!). Tune the dipper to max voltage in the tank under test, then above and below to the 1/2 power points (.707x peak voltage). Center freq/BW=Q. However, even this is subject to problems: many dippers, particularly at higher frequencies, aren't very "flat" in amplitude with changes in frequency. (You could get away from that by changing the freq of the tank being measured instead, if it includes a means of tuning.)

2872. Re: Regenerating PL tones thru a repeater.

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-28 17:55:01 UTC
From: brian@nothing.ucsd.edu
Message-ID: <289tplINNcd8@network.ucsd.edu>
Source record: 275727
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

You may wish to examine the MX-Com series of communications ICs.
I don't recall the number offhand, but they have a subaudible
signalling decoder chip that has a lookup table of PL frequencies that
you can set, and it automatically decodes each of them. The
microprocessor attached to the chip can determine which one of the
frequencies is being used, and encode the appropriate tone on the
transmitter.

For a less sophisticated approach, the community repeaters that I used
to build used a simple set of tone decoders - the Com Spec boards, a
predecessor to the TS-32 - and a simple low-pass filter that allowed
anything less than say 150 Hz to pass through to the tone input of the
transmitter. This was called a 'tone coupler'. It has the distinct
advantage that the repeater doesn't have to have any special equipment
to accomodate 'reverse burst' or 'chicken burst' squelch tail
elimination.

Another approach is to simply use several TS-32 decoders and gate their
outputs into a common mixing input. That's a bit pricy, but will work
very well.

Finally, you might look around at the various used two-way radio
dealers and see if you can find a "community repeater panel", which
will be a bank of decoders and encoders that does exactly what you
want. I've seen them for like $25-$50 at swapmeets for one that will
do like 8 tones - which is really too few in today's commercial
systems. Community repeaters are dying off and being replaced by SMR
("trunking systems") these days, so you might even be able to find a
complete system you could use at a reasonable price.

Source record: 275695

I can only assume that one of the other motivations for the restrictons in sub-developments (besides protection of homeowners' investments/property values) is that in a new development a developer can have the cable company provide the cable to each individual huse or unit. No doubt the cable company is wiling to provide this free construction work in exchange for the restrictive covenant.

The cable companies have established a near monopoly on provision of the tv sig nals to the end user at the tv set. The networks will have a difficult time at this point fighting them.

On the other hand my municipality is 'reasoanbly' tolerant (...but NO towers!). I however have found it a ham's challenge to build a 40 to 10 meter dipole, 160 meter long wire, 40 meter loop (..well almost), 20 meter dipole, 80 meter vert. and a host of 2 meter and 440 antennas in the attic and around the yard so that no body knows what they are (bird feeder, burglar alarm, etc).

Although I do find that part of the challenge, I would like to get my satellite array up!

> for the callbook etc:, How do I go about getting this
> done. Where do I write or call or get a form ???
>
> Thanks for your help in advance.
>
> ---
> Steve: as far as I can tell, fill out a form 610 with your address change and send it to the FCC. This changes your address which is also used by the FCC as the primary location for your station. Callbooks have to get their info from the FCC files, as the FCC is the only one that issues callsigns, and they get their info from the 610s.

From: sadams@eis.calstate.edu
Message-ID: <CE2uAM.6vG@eis.calstate.edu>
Source record: 275711

I may soon be in the market for an FT-530. Am going to sell my FT-470 to
my brother, who just got his ticket.

What's a good price to pay for a new 530?? Anyone get a good deal
recently and would like to share it?
Since there are no outlets in our city, it will have to be by mail order.

I purchased my FT-470 from AES, but got a little upset at them when the
day after I received it they droped the price $20 :)

Thanks for any help.

Message-ID: <38205@suned1.Nswses.Navy.MIL>
Source record: 275707

I had great success with Alinco service. My DC input
was flakey from repeated use and abuse. I contacted the
Alinco folks here in CA using the address information on
the Manual. I actually talked to a real person who
gave me instructions how to send my radio in for repair.
I had to include $35 and explained the problem, but also
asked if they could do anything with the scruffy display.

Less than 7 days after I mailed the pkg, I received my
radio with a new DC jack and a NEW display. No fuss
No bother. Celebrate Alinco Service *<:-)

Good Luck

FOR IMMEDIATE RELEASE: SEPTEMBER 28,1993
SUBJECT: New Bulletin Board (BBS)
CONTACT: Steve Lukovics, President Marketing, Creative Media Productions
125 Dutcher Street, Hopedale, MA 01747
Phone: 508-478-6969 X201 BBS: 508-478-1429

HOPEDALE, MA -- Creative Media Productions (CMP) has announced that on October 1,1993 a new (24HR) digital bulletin board (BBS) will be available.

Creative Media Productions is a state of the art multimedia studio with focus on digital imaging, multimedia products and consumer/business
presentations. Public Safety agencies have utilized CMP for it's experience in network installations and system consulting.

The telephone number will be (508) 478-1429. The board is open to the general public. A trial account is setup upon your login. At that time you will receive 15 minutes a day and 5 complimentary downloads. After a 30 day trial period you will be invited to subscribe.

RATE SHEET FOR SUBSCRIPTION

Introductory 2 Months for $10.00 which includes 50 Downloads maximum at 15
minutes a day
Basic 4 Months for $20.00 which includes 100 Downloads maximum at 30
minutes a day
General 4 Months for $35.00 which includes 100 Downloads maximum at 45
minutes a day
PC+ 2 Months for $20.00 which includes 25 Downloads maximum at 15
minutes a day and 1 Hour of PC Hardware Consultation by BBS.

In order to maintain low subscription rates for their customers, CMP will only honor personal checks at this time.

Current categories include:

Amateur Radio Communications Utilities Multimedia **
Emergency Mgt/Police/Fire PCBoard Version 15 Graphics
Health and Medical Radio Scanners Photo ***
Games and Unprotects IBM/DOS
Radio Modifications Geneology
Home and Real Estate Business

And much more.

PC+ members will receive Personal Computer technical consultation through the PC-Consulting Conference. Individuals will receive a 1.5:1 time ratio on uploads.

Creative Media Productions is a contributor and developer for major companies like Mathematica Inc. of Lakeland Florida, Image-Q of Ontario Canada and many other state of the art multimedia vendors.

** Multimedia forum under development
*** Photo forum allows exceptional quality photographs to be stored and used only by permission of the author. This photobase would be a resource for companies. Creative Media Productions will assist you in the placement of these photographs for business needs. Please inquire on this controlled library.

Amateur Radio includes modifications, technical, DX, scanning, swl and much more.

Digital manuals will be available for some Alinco radios.

Alinco,Kenwood,Drake,Yeasu,Radio shack,tentec,bearcat,uniden,kantronics and much more on line.

2882. How much are 6 land incoming bureau envelopes?

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-28 20:05:20 UTC
From: jeffj@cbnewsm.cb.att.com
Message-ID: <CE2yH6.4x9@cbnewsm.cb.att.com>
Source record: 275706

I got a notice that my supply of envelopes is just about out from
the call area 6 incoming bureau and for the life of me I can't
remember how much the envelopes were. For those of you wondering
what I mean, they will only send you your incoming QSL cards in their
envelopes. It's a good deal but I can't remember how they
were. All you have to do is send them a check and mailing lablels
with your call on them and they will ship your incoming QSL cards to you.
Makes it really easy. Now if I only could remember how much they
were. 8-) 73!

Doug: read an article on this very subject just yesterday (I think). The FCC does not differentiate code and no code on the issued licenses. You must keep a copy of your CSCE to verify that you have the code and HF privileges. So go ahead and operate without fear of jail and confiscation. I always post my license and any current CSCE's in my Ham Shack. You have your valid Tech ticket with HF privileges and don't need the /KE. Have fun.

From: glenne@sad.hp.com
Message-ID: <CE2yt3.7Hx@srgenprp.sr.hp.com>
Source record: 275705

No criticism of the preceeding suggestions intended but this is
beginning to sound a little like the high school problem of "How to
measure the height of a building with a barometer". There is of course
the "standard" answer but students easily tire of that and generate more
innovative ones:

Climb to the top, drop barometer, time how long until you hear the crash.

Tie string to it, lower to ground, mark string, reel up and measure string.

Compare length of shadows of building and barometer, multiply by barometer H.

etc
etc

In this vein, maybe one could call up the coil manufacturer and say "I
have here a fine grid dip meter which I will gladly give you if you
will tell me the Q of this coil".

And no one has yet mentioned building a quality oscillator with the coil,
injection locking the grid dip meter to it and monitoring the
bias inside the GDM at an approriate point with a scope and observing
phase noise to give an indication of the Q.

All right, I'll go away (:>)

Distance and a power switch. (Sorry, this is one of those days!!!)

Seriously, there is probably more RFI from the monitor than the PC, or
maybe some feedback through the power cord into the power sockets. I use a
power conditioner for the PC and don't seem to have that problem, even
though the PC and monitor are within 24 inches of my TS-520 HF rig, with
one coax to the antenna passing within inches behind the PC. You might
also make sure the monitor cord is shielded and not passing close to any of
your antenna feed lines.

I have a JPole built in PVC pipe. The wire has an elastic cord pulling it
tight against the top. The pipe is in three sections that I can take apart
and stick in my suitcase when traveling. Currently, I bracketed it to a 2
x 2 attached to the edge of the roof outside my ham shack. Works great and
no interference with my PC, my SW receiver (old Knight), my stereo, or
other radios. I used the JPole up in the mountains on vacation with my 2M
mobile, and was able to hit the home repeater from 90 miles away with
mountains in between using 50 watts.

: Bill
: VE4STW

I don't see why not. Last time I had mine renewed here in Arizona (my driver's license, that is), I went to the appropriate office, stood in line about 3 hours, had my picture taken, was handed the equivalent of a C.S.C.E., and about 12 weeks later recieved a notice that they were running "longer than expected", and about 4 weeks after that I recieved my driver's license. Total wait: about 16 weeks. So the FCC isn't really too bad, except that they don't send out notices saying that they're running behind. (I think that they've since changed the system yet again, so it doesn't take so long. The reason that they make you wait is that they run a nation-wide computer check to see if you have had your license suspended/revoked.)

Date: 1993-09-28 22:51:57 UTC
From: walker_d@kosmos.wcc.govt.nz
Message-ID: <28af6d$c2@golem.wcc.govt.nz>
Source record: 275713

The use of OPTUS for JOTA weekend has been confirmed. The satellite will provide circuits to connect up cities within VK and to ZL.

Each circuit uses TWO satellite hops (all circuits routed thru Belrose, Sydney), so beware of tthe delay on the path.
The New Zealand end will be connected to the National System (UHF). Try to leave at least a couple of seconds between overs to give the repeaters ttime t activate / deactivate (there more than 20 rptrs linked together on the ZL side).

The following schedule arrived on packet the other day:
==========

From : VK2CAD
To : JOTA @VKNET
Date/time : 26-Sep 12:00
BTitle : 1993 JOTA & OPTUS
Timetable and Connectivity
Times are UTC.

Start Time: 0800, Friday 15th October, 1993
Finish Time: 0100, Monday 18th October, 1993

Frequencies of Operation (Sydney area)

0800 Fri - 1100 Fri (3 hours)
Darwin Canberra
Brisbane New Zealand
Sydney Perth 146.650 MHz (Rpt)
Sydney Hobart 146.875 MHz (Rpt)
Melbourne Adelaide

1100 Fri - 2100 Fri (10 hours)
Melbourne Canberra
Sydney Perth 146.775 MHz (Rpt)
Sydney Darwin 146.875 MHz (Rpt)
Hobart Adelaide
New Zealand Brisbane

2100 Fri - 0001 Sat (3 hours)
Adelaide Perth

Tom,
The FT411e has a built in VOX-relay, it's a tad bit more complex
to make a vox circuit, luckily I didn't have to.-
good luck w/ the project (the 1993 arrl handbook has the specs for making
a vox cuircuit that works on any rig -the one they talk about was
origionally made for hf rigs- but would work w/ an HT, you might have
better luck w/ that $5 headset- sorry you got me there)

Message-ID: <1993Sep29.004842.7704@microsoft.com>
Source record: 275635

I don't understand: Its now standard procedure for the captain or lead flight attendant to announce that all types of transmitting equipment, plus a whole bunch of others now (like notebook computers and CDs which have been specifically listed on the intercom) are not be used either at all or during the take off and landing phase of the flight. Their concern is with use of cellular phones on aircraft - which would be far more of a problem than the few hams who carry HTs.

Oh, I flew Morris Air from Seattle to San Jose 3 weeks ago. In my daypack I had an IC W2A plus extra battery, a Yaesu FT727 plus 3 extra batteries, plus 12 v DC power cord adaptor, plus a folded 5/8 wave 2m vertical and mag mount, plus a 486 notebook computer and extra battery and a pager on my hip. Pretty electronically eccentric, I think.

Now for the funny part: After running my bag through x-ray, the security guard asked me to demonstrate that the pager worked! Didn't ask any questions about all the other junk I was carrying.

Oh well.

Another way to go is 3 seperate decoders (say CS TS-32x series)
which have built-in encoders which can be configured to enable
the matching encode PL tone on the TX only when the a desired PL
tone is decoded. About $60.00 each.

From: RHAREL@FAB8.INTel.COM
Message-ID: <9309290606.utk2623@FAB8.intel.com>
Source record: 275632

When I explained my displeasure to the Alinco sales people at the Dayton Hamvention about the numerals rubbing out on my beloved DJ-580's keypad, one of the reps there reached into his grab bag and gave me a new keypad - no charge. He explained just to be very careful replacing the old one since it's a delicate operation.
On the other hand, no one at Alinco could figure out why my DR-600 was falsing when in the remote mode. I finally figured out the mod to slow down the responce time of Touch Tones on the Teltone 8880 IC. No more falsing and now have complete control of the xcvr remotely.
The mod WAS forwarded to Alinco.

2907. Re: How to Measure Q

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-29 09:47:37 UTC
From: dstock@hpqmoca.sqf.hp.com
Message-ID: <CE40JG.IEH@hpqmoea.sqf.hp.com>
Source record: 275660

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:

(edits)

: Well, if the dip meter has a trustworthy dip indicator, and has a
: drive port for a frequency counter, you can get Q by knowing that
: Q=Fo/BW where Fo is the frequency of maximum dip and BW is the
: width to the 3 db points on either side of max dip. For example,
: if dip occurs at 1 MHz and the dip indicator shows a 1/2 power
: change at +/- 10 kHz, then the Q is 50. Obviously you need to
: use a high Q capacitor across the inductor to achieve resonance.
: Normally the capacitor's Q will be high enough that only the
: Q of the inductor is being measured.

: Gary

The problem is that dip meter's indication has no predictable law, I don't think I've ever heard of one with any amplitude calibration at all. If you knew where on the scale the half power level is compared to the peak level, this method would work.

With a bog-standard made for the amateur market dipper, you have no chance of measuring Q. Experienced users can get a feel for the sharpness of the dip, and can tell high Q from low Q resonances, but that is about all you can reasonably expect.

There are such things as Q meters. Professional machines now showing up on the surplus market. The venerable Boonton ones are well respected. These devices work on the general principle of applying a little current into the tank circuit from a VERY low source impedance, and measuring the voltage across the L or C using a very high Z RF voltmeter. The dual of this, applying a voltage to the tank from a high Z source and measuring the circulating current with a very low Z RF ammeter will also work. Basic teaching always says that parallel tuned circuits are infinite Z at resonance, and series ones are zero Z at resonance. This is only true for ideal circuits. For real world circuits, how close they approach this ideal is a measure of their Q.

The old Marconi Instruments "Circuit Magnification Meter" is a monstrous looking object, to strike fear into novice onlookers, but it is superb, sometimes seen surplus from traders who do not know its worth. These instruments are much better at handling high Q conponents than the classical RF component bridges of the same period.

If you do see one of these for sale, and you want to get full use out of it, look for the matching sets of very high Q standard inductors.

Full of valves (toobs) these things are treated as boat-anchor scrap by an increasing number of traders. Those in the know set very high prices. This is a rewarding area for a little careful shopping.

Hope this helps a bit

David GM4ZNX

2908. Cavity amplifier design

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-29 09:58:08 UTC
From: dejongh@dutiws.twi.tudelft.nl
Message-ID: <CE410x.DDG@dutiws.twi.tudelft.nl>
Source record: 275636
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.homebrew,sci.electronics

This is my second attempt.... I didn't receive any response at all!
Come on.. is there actually nobody who can answer my questions?

Repost.....:

For a long time I'm looking for the mathematics behind amplifier cavity
design. Designing an amplifier with a 1/4 (3/4 or 5/4) wavelength Lecher is
not a problem. The mathematics and formulas are widely available.
Theory and practice coincide well.
Looking at several cavity designs of tube amplifiers in the 1 - 3 GHz range
it seems that one mode is common: TEM101 (I'm not sure if this is correct).
One can determine that for a circular cavity the diameter is related
to half the wavelength and depends on the capacitance of the tube being used.
The height, mostly fixed due to the physical properties of the tubes,
determines the cavity impedance, I'm told.
I asked numerous SHF-heroes about the formulas behind the cavities. Nobody
could give me a satisfying answer. In fact, most 'designers' admitted that
they used the trail and error approach.
Looking in several books (electronic engeneering, physics, etc) the theory
behind cavities is explained. But I've never seen a publication where
a tube (read: capacitance) is introduced and with what effect on the physical
properties of the cavity.
I want to design an amplifier for 1296 MHz (23 cm amateurband) with a tube
but I don't want to use the 3/4:5/4 wavelength approach.

Anyone in net.land who has info, examples or references on this subject?

Thanks in advance,

Remco, PA3FYM (besten@chem.ruu.nl)

2909. Re: I bet you've never heard this one

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-29 10:12:10 UTC
From: dstock@hpqmoca.sqf.hp.com
Message-ID: <CE41oB.ItM@hpqmoea.sqf.hp.com>
Source record: 275659

One bit of advice well worth considering:

DONT RUSH OUT AND BUY A NEW RIG.

Find something old, second-hand and above all, cheap. Don't bother
about dual band stuff yet.

Play with it, use it for a few months, meet some folk on the air.
Find out in the most personal, and convincing way possible what you love
and loathe about your cheap radio.

When you decide to buy your new one, you have something to compare it
against, you can segregate useless features from ones you would use.
The threatened price rises are trivial compared to the loss you take if
you don't like a new radio and decide to change.

There are two good jokes:

1) you should be able to sell your cheap radio for what you paid
for it. Zero cost learning ! these things are on price floors.

2) you may choose to keep the oldie. The new ones with XXX MHz of
scanning, very low battery consumption etc have sacrificed RF
performance for it. In busy areas, with lots of neighbouring
frequencies in use, you will find that the most effective radios
are either modified professional jobs (motorola etc.) or are
old models long out of production. Just think of feature laden
cars powered by lawnmower motors in a world where you could buy
a second hand Porsche 911 for a fraction of the price, and you
will be close to understanding the hand-held market. This
criticism does not apply to HF base equipment, just VHF/UHF
portables.

Hope this helps a bit,
David GM4ZNX

I'm not familiar with some of the terms (e.g. Lecher) you're using,
and your brief description wasn't enough to allow me to fully
understand your application. Therefore I cannot address your
problem directly.

I'm involved in the design of microwave amplifier tubes with
emphasis on fast wave devices (gyrotrons). One reason why you
might not find more than the simplest examples of cavities worked
out in books is that the more complicated cases are practically
intractable from an analytic approach. Anything but the simplest
examples are hard to set up, a pain to try to solve analytically,
require computer solution of integrals, and after all that the
parameter you're trying to solve for might be off from the actual
value by an order of magnitude. For microwave circuits involving
waveguides and cavities it's almost always easier to hone your
design in the lab with some mock-ups of the "plumbing". This
applies to passive microwave devices.

Active microwave devices, including electron beam tubes you refer to, are even harder to analyze. When we tackle such problems we must rely on a computer to solve the self-consistent set of differential equations which describe the interaction between the electron beam and the microwaves. Forget about approaching these things analytically. The Russians have been better than most with their analytic approaches (they didn't have good computers to lean on like we had), and I can tell you from experience that the great Russian papers are VERY hard to read and understand, for all the high level applied math.

You're better off trying to measure the desired parameter (capacitance?) in the laboratory, if you can. Sorry if this isn't much help. I didn't understand your underlying problem, just some of the peripheral complaints.

First off, if its "free", then how come it costs $600+ for the hamserver project to get a tape with the data each year? No, its not "free" at all.

I base my statements upon my own personal experience. When I upgraded from technican to advanced, three weeks after I upgraded I received a catalog from AES along with a "Congratulations on your upgrade!" letter. Since my new license didn't arrive from the FCC for another 4 weeks, and was dated three weeks after I had received my AES catalog, *SOMEONE* in the chain had to sell my name. Since it wasn't the FCC, and I doubt that the local VE did, then that only leaves one other intermidiary......

> "Bailar es Vivir"
> PGP2.X key at key servers or upon request

I think many of us share this sentiment. However, remember the FCC only implements and enforces communications laws passed by Congress. With CC&Rs, we are dealing with another area, established real estate law. I doubt if the FCC has the authority to preempt CC&Rs, and even if it did, I doubut if it would help a lot as how could you enforce it.

The current thread about premption of scanner laws is a case in point. No matter what the FCC has said, if the "locals" decide to arrest you, you will have the burden of pursuing your "right" to have the equipment. You will bear the cost of the lawsuit and may or may not win (see results of PRB-1 court battles, including the ones lost that the ARRL seems to ignore printing in QST). Many states and localities enforce "illegal" laws. This is what keeps federal appeals courts and the Supreme Court in business. It also is not too bad at helping attorneys make money.

I believe to address CC&R preemption our only hope of success is having Congress draft legislation to do so. So, folks contact your congresspersons and representatives. Having been a title searcher and title officer at a title company at one time, I can tell you that CC&R prohibiting blacks from living in subdivisions, except as servants, were once the rule as opposed to the exception. In modern subdivisions, CC&Rs against any kind of outside antenna or just against radio towers and antennas is becoming the rule not the exception. Congress needs to address this just as it did the racial discriminatory restrictions. CC&Rs on both deeds and in association rules need to be addressed. They are similar but different animals.

The best way to learn the code (actually, improve your code since your
Novice license means you know the code) is to get on the air and ragchew.
No substitute for practice, and live practice is by far the best.

> Why would HRO and others pay for what they can get for nothing?

Not true. Maybe you can go in and look at FCC records for free, I don't know. But when Buckmaster, the CALLBOOK company, or all the online callbook server on the net request the info from FCC they have to pay something like $600.00 for the computer tape from FCC.

If I could get a callbook from FCC for free, why would I go to HRO and buy one?

> Doug, N0YVW

Congratulations Doug, and welcome to the hobby. It's interesting: it seems that the FCC processed a whole slew of licenses last week, from a number of different test dates. My wife took her test on July 25 [9 weeks], and received hers on Monday the 27th also (Donna is KE4FYM). I've heard a number of KE4G?? calls in our area that just arrived this week also.

What organization was the VEC for your test session? That's important information for those folks out there still waiting, and getting a "baseline" of how long to expect their processing to take. ARRL VEC tends to add a week of two of processing before the application gets to the FCC, as does, I'm sure W5YI. Local VECs like Laurel ARC in Maryland (where Donna took hers) tend to send things off within a few days. (ARRL and W5YI: no offense intended, just the facts).

Again, congratulations Doug!

That's interesting. Which VEC handled your upgrade? I think it would be illegal for the VE's to sell that info (I guess they could give it away, tho) but I don't think it would be illegal for the VEC to do so (unethical, maybe).

Back in 'the old days' (pre-VEC, when the FCC gave the tests) it wasn't unusual for this to happen. Lots of hams found out their callsigns from the advertising they received before their licenses arrived, often a couple weeks or more before. Of course, it wasn't legal to use the callsign before the license arrived and I'm sure nobody ever did ;-).

Well, Kris, it depends what you think it became irrelevant TO!
It still isn't irrelevant to amateur radio HF operations and
likely won't be for a long time to come. Now, as far as being
irrelevant as a LICENSING REQUIREMENT, some of us think that
may have occurred some 20 years ago! :-)

I had used Super Morse for the P.C. It is located via ftp
on oak.oakland.edu /pub/msdos/hamradio. The file name is sm404.zip.

Good luck. I did it after 19 years as a Technician. I had a need
now that my sister-in-law lives in Papa New Guiana.

Can't remember offhand, I believe it was W5YI, but it could have been
ARRL too (some VEs in the area use W5YI CSCEs even though the test session
is a "ARRL" VE session...)

My very good friend Ed Hare at the ARRL informed me the last time we had
supper that to the best of his knowledge the ARRL doesn't do this. Of
course, I have complete faith in Ed, and have no reason to believe that
the policies of the ARRL are other than that which he states (although
I do know they enter the data into a computer, apparently, since I
believe this was one reason Bart Jahnke said, some time ago, that
the ARRL VEC was slow in processing paperwork).

Of course, I have always alikened the ARRL to the Kremlin of
amateur radio, so I suppose that the league's KGB division could
actually be planting disinformation as part of their
counterintelligence operations.....

"Achtung"
"Achtung"

Numbers Fans!

Issue 3 of ENIGMA, the journal of The European Numbers Information Group and Monitoring Association has just been published.

In Issue 3 you'll find:

* Details of how to order Simon Mason's excellent book "Secret Signals (The Euro Numbers Mystery)"

* Letters from Numbers Stations monitors around the world

* The "Tyrolean Music" Numbers Station - A retrospective

* Station News and Latest Monitoring Data

* The Lincolnshire Poacher
* The US Counting Stations
* Station NNN
* The 3 Tone Oddity
* The Five Dashes Station
* Station Strich
* Spanish Numbers Stations
* Bulgarian Betty
* Czech Station OLX - with a complete transmission schedule

* "The German Two Letter Stations" an article from Simon Mason. This includes a complete transmission schedule for these stations as compiled for ENIGMA member's logs - callsigns, times and the frequencies used.

* A detailed look at the Female Phonetic Alphabet Stations which are apparently operated by Mossad, the Israeli Intelligence Service.

* Detailed time and frequency information for each of the stations featured including North American monitoring data as well as that from Europe.

If you are in any way interested in Numbers Stations, then this is *the* definitive, up-to-the-minute guide for you - look no further. A copy of ENIGMA 3 can be obtained by post from:

The journal is still free of charge but return postage or IRCs and a small donation would be appreciated. Please do not send any return envelopes with your request!

ENIGMA is working towards an electronically produced issue which can then also be distributed via UseNet but for the time being, get your paper copy direct from Chris - it's well worth it.

Magazines, DX Clubs and other interested groups can also request a "flyer" from Chris, which will tell you about ENIGMA, the group and its aims. We would be very interested to hear from you and thereby perhaps spread the coverage of our monitoring activities. I also have an electronic copy of the flyer for those requesting it direct from here.

Meanwhile, I will be happy to co-ordinate the electronic side of things here on UseNet. Any reference material, archive articles and logs sent to me will be passed on to Chris for inclusion into the newsletters.

You can reach me via Internet e-mail at:

Mike Chace <mikec@praxis.co.uk>

Thanks & 73, Mike

2933. Looking for good source of 6146 tubes - and other 6146 questions...

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-29 16:13:42 UTC
From: rossi@VFL.Paramax.COM
Message-ID: <1993Sep29.161342.24463@VFL.Paramax.COM>
Source record: 275654
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

After going through my tube inventory I figured it would be a good move to pick up a new pair of 6146 tubes to have around. After all the price will only keep going up and up and up :-(

Now it seems that all of the parts distributors list "matched pairs" for an additional 25-30% more.

In the past I never bothered with "matched pairs". I simply would go to the local parts store and ask for " Two 6146s please.. " and they always worked just fine.

It leads me to question -- If you don't order a "matched pair" then will you necessarily get an "unmatched" pair?

How do these distributors match them anyway? It is hard to imagine your typical distributor having the equipment to match them... especially given how popular tubes are these days ;-) Or does the manufacturer match them? Do they come in a " convenient 2-pack " ?

Is there much difference between these cheaper Penta and International tubes vs. good old GE, RCA, etc. I thought RCA stopped making tubes years ago? ... Or do they all come out of the same factory?

I remember years ago (pre-VEC days) one of my friends got "junk mail"
with a CALLSIGN on it at least a week *BEFORE* his license came. It
was from one of the QSL card printers.

The answer to this question may be of interest to others on the net.
So a comprehensive response is being posted.

A list of Public Dialup Internet Access sites is maintained by Peter
Kaminski. This pdial list is sent out periodically. It is included
for your reference. Read it and if you know of others, sent them to
Peter.

Here is a copy of the mailing header that comes with the pdial list:

#include <pdial header.h>

From: kaminski@netcom.com (Peter Kaminski)
Message-Id: <9308100134.AA08336@netcom3.netcom.com>
To: PDIAL Mailing List <kaminski@netcom.com>
Errors-To: kaminski@netcom.com
Subject: PDIAL013.TXT, 23 July 1993

This is the mailing list distribution of the PDIAL, the Public Dialup
Internet Access List. Contact me at kaminski@netcom.com (preferred)
or 71053.2155@compuserve.com with problems, comments, or questions.

This is somewhat delayed from other distributions of the PDIAL --
basically, I've been busy, and needed to do some work on the mailing list
before getting it out to the list.

In the meantime I've also released an "experimental" hypertext version of
the PDIAL, in MS Windows Help viewer format. You can FTP that version from
"ftp.netcom.com:/pub/info-deli/pdial-archive/pdial013.hlp", or email me and
I can email it back uuencoded.

Meanwhile, here are the changes and the current PDIAL:

New in PDIAL013:

New providers: Ariadane CAPCON crash.cts.com dircon IGC Maestro
northshore novalink PUCnet tmn uunorth Vnet wyvern

New points of presence: crl netcom

New info: psi-gds replaced by psi-world-dial; rock-concert replaced by
concert (shell discontinued); telerama info changed

New area code listings for providers and points of presence above:

The Public Dialup Internet Access List (PDIAL)
==========
File PDIAL013.TXT -- 23 July 1993

Copyright 1992-1993 Peter Kaminski. May be copied freely for non-
commercial use if not modified. Additional notices at end of document.

Contents:

-0- Quick Start!
-1- Area Code Summary: Providers With Many Local Dialins (1-800, PDN)
-2- Area Code Summary: US/Canada Metro and Regional Dialins
-3- Area Code Summary: International Dialins
-4- Alphabetical List of Providers
-5- What *Is* The Internet?

-6- What The PDIAL Is
-7- How People Can Get The PDIAL (This List)
-8- Appendix A: Finding Public Data Network (PDN) Access Numbers
-9- Additional Notices; Submitting Updates and Corrections

Subject headers below are formatted so this list may be read as a
digest by USENET newsreaders that support digests. Example commands:
rn, "control-G" skips to next section; nn, "G%" presents as a digest.

Or, just skip to desired section by searching for the desired section
number string (e.g. "-1-") from the list above.

From: PDIAL -0-
Subject: Quick Start!

The Internet is a global cooperative information network which can give
you instant access to millions of people and terabytes of data. Providers
listed in the PDIAL provide inexpensive public access to the Internet
using your regular modem and computer.

[Special note: the PDIAL currently lists only providers directly connected
to the Internet. Much of the Internet can still be explored through
systems with only Internet email and USENET netnews connections, but you
need to check other BBS lists to find them.]

Phone charges can dominate the cost of your access to the Internet. Check
first for providers with metro or regional dialins that are a local call
for you (no per-minute phone charges). If there aren't any, move on to
comparing prices for PDN, 800, and direct-dial long distance charges.
Make sure to compare all your options. Calling long distance out-of-state
or across the country is often cheaper than calling 30 miles away.

If you're not in North America and have no local provider, you may still
be able to use one of the providers listed as having PDN access. Contact
the individual providers with PDN access (see listings below) to find out.

The information listed in the PDIAL changes and expands rapidly. If this
edition is more than 3 months old, consider obtaining a new one. Check
section -7- for details.

Remember, the PDIAL is only a summary listing of the resources and
environment delivered by each of the various providers. Contact the
providers that interest you by email or voice phone and make sure you
find out if they have what you need.

Then go for it. Happy 'netting!

From: PDIAL -1-
Subject: Area Code Summary: Providers With Many Local Dialins (1-800, PDN)

PDN delphi holonet IGC michnet portal psi-world-dial psilink tmn
PDN well world
800 class cns crl csn dial-n-cerf-usa IGC jvnc OARnet

"PDN" means the provider is accessible through a public data network (check the listings below for which network); note that many PDNs listed offer access outside North America as well as within North America. Check with the provider or the PDN for more details.

"800" means the provider is accessible via a "toll-free" US phone number. The phone company will not charge for the call, but the service provider will add a surcharge to cover the cost of the 800 service. This may be more expensive than other long-distance options.

From: PDIAL -2-
Subject: Area Code Summary: US/Canada Metro and Regional Dialins

If you are not local to any of these providers, it's still likely you are able to access those providers available through a public data network (PDN). Check the section above for providers with wide area access.

These are area codes local to the dialups, although some prefixes in the area codes listed may not be local to the dialups. Check your phone book or with your phone company.

Most providers listed here are also accessible by packet-switched data services such as PC Pursuit ($30/month for 30 hours off-peak 2400 bps access -- call 800-736-1130 for more information), traditional long distance services, and of course telnet.

From: PDIAL -3-
Subject: Area Code Summary: International Dialins

If you are not local to any of these providers, there is still a chance you are able to access those providers available through a public data network (PDN). Check section -1- above for providers with wide area access, and send email to them to ask about availability.

From: PDIAL -4-
Subject: Alphabetical List of Providers

Fees are for personal dialup accounts with outgoing Internet access;
most sites have other classes of service with other rate structures as
well. Most support email and netnews along with the listed services.

"Long distance: provided by user" means you need to use services such
as PC Pursuit, direct dial long distance or other long distance services.

From: PDIAL -5-
Subject: What *Is* The Internet?

The Internet is a global cooperative network of university, corporate,
government, and private computers, all communicating with each other by
means of something called TCP/IP (Transmission Control Protocol/Internet
Protocol). Computers directly on the Internet can exchange data quickly
and easily with any other computer on the Internet to download files, send
email, provide remote logins, etc.

Users can download files from publicly accessible archive sites ("anonymous
FTP"); login into remote computers (telnet or rlogin); chat in real-time
with other users around the world (Internet Relay Chat); or use the newest
information retrieval tools to find a staggering variety of information
(Wide Area Information Servers, Gopher, World Wide Web).

Computers directly on the Internet also exchange email directly and very quickly; email is usually delivered in seconds between Internet sites.

Sometimes the Internet is confused with other related networks or types of networking.

First, there are other ways to be "connected to the Internet" without being directly connected as a TCP/IP node. Some computers connect via UUCP or other means at regular intervals to an Internet site to exchange email and USENET newsgroups, for instance. Such a site can provide email (though not as quickly as a directly connected systems) and USENET access, but not Internet downloads, remote logins, etc.

"email" (or "Internet email", "netmail") can be exchanged with a wide variety of systems connected directly and indirectly to the Internet. The email may travel solely over the Internet, or it may traverse other networks and systems.

"USENET" is the collection of computers all over the world that exchange USENET news -- thousands of "newsgroups" (like forums, or echos) on a wide range of topics. The newsgroup articles are distributed all over the world to USENET sites that wish to carry them (sometimes over the Internet, sometimes not), where people read and respond to them.

The "NSFNET" is one of the backbones of the Internet in the US. It is funded by the NSF, which restricts traffic over the NSFNET to "open research and education in and among US research and instructional institutions, plus research arms of for-profit firms when engaged in open scholarly communication and research." Your Internet provider can give you more details about acceptable use, and alternatives should you need to use the Internet in other ways.

From: PDIAL -6-
Subject: What The PDIAL Is

This is the PDIAL, the Public Dialup Internet Access List.

It is a list of Internet service providers offering public access dialins and outgoing Internet access (ftp, telnet, etc.). Most of them provide email and USENET news and other services as well.

If one of these systems is not accessible to you and you need email or USENET access, but *don't* need ftp or telnet, you have many more public access systems from which to choose. Public access systems without ftp or telnet are *not* listed in this list, however. See the nixpub (alt.bbs, comp.misc) list and other BBS lists.

Some of these providers offer time-shared access to a shell or BBS program on a computer connected directly to the Internet, through which you can FTP or telnet to other systems on the Internet. Usually other services are provided as well. Generally, you need only a modem and terminal or terminal emulator to access these systems. Check for "shell", "bbs", or "menu" on the "services" line.

Other providers connect you directly to the Internet via SLIP or PPP when you dial in. For these you need a computer system capable of running the software to interface with the Internet, e.g., a Unix machine, PC, or Mac. Check for "SLIP", or "PPP" on the services line.

While I have included all sites for which I have complete information, this list is surely incomplete. If you have any additions or corrections please send them to me at one of the addresses listed in section -9-.

From: PDIAL -7-
Subject: How People Can Get The PDIAL (This List)

EMAIL:

From the Information Deli archive server (most up-to-date):
To receive the current edition of the PDIAL, send email containing the phrase "Send PDIAL" to "info-deli-server@netcom.com". To be put on a list of people who receive future editions as they are published, send email containing the phrase "Subscribe PDIAL" to "info-deli-server@netcom.com". To receive both the most recent and future editions, send both messages.

From the news.answers FAQ archive:
Send email with the message "send usenet/news.answers/pdial" to "mail-server@rtfm.mit.edu". For help, send the message "help" to "mail-server@rtfm.mit.edu".

USENET:

The PDIAL list is posted semi-regularly to alt.internet.access.wanted, alt.bbs.lists, alt.online-service, ba.internet, and news.answers.

FTP ARCHIVE SITES (PDIAL and other useful information):

Information Deli FTP site:
ftp.netcom.com:/pub/info-deli/public-access/pdial [192.100.81.100]

As part of a collection of public access lists:
VFL.Paramax.COM:/pub/pubnet/pdial [128.126.220.104]
(used to be GVL.Unisys.COM)

From the Merit Network Information Center Internet information archive:
nic.merit.edu:/internet/pdial [35.1.1.48]

As part of an Internet access compilation file:
liberty.uc.wlu.edu:/pub/lawlib/internet.access [137.113.10.35]

As part of the news.answers FAQ archive:
rtfm.mit.edu:/pub/usenet/news.answers/pdial [18.70.0.224]

From: PDIAL -8-
Subject: Appendix A: Finding Public Data Network (PDN) Access Numbers

Here's how to get local access numbers or information for the various PDNs. Generally, you can contact the site you're calling for help, too.

IMPORTANT NOTE: Unless noted otherwise, set your modem to 7E1 (7 data bits, even parity, 1 stop bit) when dialing to look up access numbers by modem as instructed below.

BT Tymnet

For information and local access numbers, call 800-937-2862 (voice) or 215-666-1770 (voice).

To look up access numbers by modem, dial a local access number, hit <cr> and 'a', and enter "information" at the "please log in:" prompt.

Compuserve Packet Network

You do NOT have to be a Compuserve member to use the CPN to dial other services.

For information and local access numbers, call 800-848-8199 (voice).

To look up access numbers by modem, dial a local access number, hit <cr> and enter "PHONES" at the "Host Name:" prompt.

PC Pursuit (SprintNet)

PC Pursuit may be used to call a modem in any of 44 major metro areas in the US from local access numbers around the country. As such, it can be used to access most of the providers listed in the PDIAL (those with no other PDN access or even those which are accessible by other PDNs).

For information and registration, call 800-736-1130 (voice) or 800-877-2006 (data). More information is also available on the PC Pursuit support BBS (see below).

To look up access numbers by modem, dial 800-546-1000, hit <cr><cr><cr> at 1200 baud or '@'<cr><cr> at 2400 baud. Enter "MAIL" at the "@" prompt, then "PHONES" at the "USER NAME:" prompt, and "PHONES" at the "PASSWORD:" prompt.

The PC Pursuit support BBS provides a great deal of information about PC Pursuit, including rates, terms and conditions, outdial numbers, etc.

To access the PC Pursuit support BBS, dial a local access number and hit <cr><cr><cr> at 1200 baud or '@'<cr><cr> at 2400 baud. Change modem parameters to 8N1, and enter "C PURSUIT" at the "@" prompt.

PSINet

For information, call 800-82PSI82 (voice) or 703-620-6651 (voice), or send email to "all-info@psi.com". For a list of local access numbers

send email to "numbers-info@psi.com".

From: PDIAL -9-
Subject: Additional Notices; Submitting Updates and Corrections

I make no representations about the suitability or accuracy of this document for any purpose. It is provided "as is" without express or implied warranty. All information contained herein is subject to change.

For UPDATES AND CORRECTIONS or REQUESTS FOR COMMERCIAL DISTRIBUTION, contact the author at the addresses below. If you have new or updated entries, send them to me in the format used in the PDIAL listings. Also include an email address to which I can send requests for more information.

I have obtained a good amount of Teflon thick Ethernet coax cable.
I would like to use it for my amateur antennas. It's shielded beyond
belief with a braid-foil-braid-foil setup. Does anybody know how it's
electrical characteristics relate to other popular coax types such as
Belden 9913? I'm well aware that it is 50 ohm and expensive. :-)

To enjoy DF-ing, you may start with simple event - like club picknic with
FOX hunt of 20-30 min.
Gear should not be more complex than handy with dipol or loop that you carry in your hand.
With more elemants your directivity will improve, however in hunt
it si not the S-9 that counts, but the null of the FOX that will lead you.
As for the FOX use same old handy with timer that will key the TX 10 sec.
of every min. For antenna use dummy load resistor 50ohm/2w.
FOX can be placed in trunk of the old tree, inside the decoy of duck floating
in the park pond, in the baloon or kite flowen by non member,
in the back-pack of non-mamber repairing his/her bike during FOX hunt etc.
Small prize, like trip to Hawaii will attract members attention.

Interested in the Amateur Radio Service, but don't
know where to turn to locally for assistance?

Well, one of the very best ways to get a local helping
hand is to establish a relationship with your local
Amateur Radio club. And most areas of the country have
more clubs than you'd think possible.

Ah, but the eternal question is always "Say, just how
DO I contact an Amateur Radio club near me?"

Well, folks, do I have a deal for you!

For the price of a message to me here at ARRL HQ,
(SEEMS cheap enough!) and a specific request, I can get
you listings of more clubs than you'd ever want to visit.

To make it happen, please send me a message with your
name, your mailing address, and a specific request for the
Amateur Radio clubs in your area. I'll get them right out
to you.

And for those of you who are already licensed radio
amateurs, remember, your local clubs represent an ENORMOUS
resource for you.

Having trouble with TVI or local ordinances that
affect your capability to serve the public by way of your
Amateur Radio license? Interested in finding someone to
assist with a tower installation? Need to locate a
kindred spirit that understands YOUR concerns about
Amateur Radio satellite operation or digital networking
via Amateur Radio? Chances are that someone in your club
can help.

Another free service, brought to you by the world's
largest support organization for the Amateur Radio Service
-- the American Radio Relay League.

A reminder to all that the American Radio Relay League
continues to make available to Amateur Radio Operators and
non-amateurs alike a wide variety of free materials and
services. Of particular interest to the not-yet-licensed
individual would be the ARRL Prospective Ham Package. In
the PHP, one would find:
-
1. Printouts of Volunteer Examination session
opportunities in his/her area.
-
2. Listings of Amateur Radio clubs in his location.
-
3. Helpful promotional material about the Amateur Radio
Service.
-
The already-licensed individual might well be interested
in another free ARRL publication, the ARRL Public Service
Communications Manual. The PSCM represents the "bible" of
public service communications, and clearly/concisely
points out how the ARRL National Traffic System and the
ARRL Amateur Radio Emergency Service function as a
cohesive unit to provide the maximum support to the public
both in times of disaster as well as "normal" times.
-
To obtain any of these free ARRL services, please
provide me with:
-
A. Your name
B. Your mailing address
C. A Specific request for either of the two services
above.
-

: In article rrq@gopher.cs.uofs.edu, bill@triangle.cs.uofs.edu (Bill Gunshannon) writes:
: }First, all existing covenants would have to be grandfathered
: }because the Constitution prohibits "ex post facto" laws. That specifically means
: }you can't make something illegal after the fact. And second, covenants are part
: }of contract law. I hardly think the state of Florida is going to successfully,
: }single-handedly re-write the concept of contract law.

There is a clasic example of covenants being struck down by law: many, many subdivisions were built and sold prior to the 1960's with covenants that prohibited any future owner from selling the property, or allowing it to be occupied by, people of certain races. These were all struck down in the 1960's.

I'm no lawyer, but one thing I am aware of is that any clause of any contract which becomes illegal, or requires anything on the part of either party which becomes illegal, will not be enforced by the courts. Depending on the wording of the contract, such a change in the law may or may not cause the entire contract to become "null and void".

Making such covenants unenforcable is not a violation of the "ex post facto" prohibition, if the new law only allowed new antennas/towers to go up. It _would_ be a violation if it awarded people who had tried to do it and failed prior to enactment some recompense, or provided some penalty for those who tried to enforce the old covenants before the new law went into effect.

73,
Clark

Vilifying ARRL seems to be your knee jerk reaction. Gosh, you don't
even stop and think of other possibilities before you get out the tar and
feathers do you?

How about a much more inane explanation that relies on:
i) The licenses are printed on Tuesdays and mailed on Thursdays
ii) The database info is available on-line through selected channels
such as terminals the Library in W DC.

So, if an application is processed on Tuesday after the print run, the
license will not be printed till the following Tuesday, mailed on Thursday
be in the ham's hand as late as the following Tuesday. Two weeks. And
all this time the call sign, name etc is available. How about that?

So put back the tar brush and dust off the feathers.

2947. Soundblaster(tm) for Multi-mode Digital Communications ?

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-29 18:15:33 UTC
From: cnc23a@b4pph13e.bnr.ca
Message-ID: <1993Sep29.181533.17916@brtph560.bnr.ca>
Source record: 275612

I recently saw an advertisement in QST of a software program that will
use the Soundblaster(tm) for SSTV decoding. I know of a public domain program
that uses the Soundblaster(tm) for DTMF decode. The VOICEBLASTER (tm) product
will do voice recognition.

This leads to a simple question : "Can the Soundblaster (tm) be programmed to
do all the 1200, 2400, 9600, afsk, psk, etc. TNC work, (Color) SSTV, WEFAX,
RTTY, CW, AMTOR, FAX, PACTOR, CCTSS, DTMF, etc. etc. work that a multi-mode digital
controller does ?" I realize there would need to be some sort of IO
board/port to to tramsmitter keying, but is it possible ?

Pardon my ignorance but can this really be called "white noise"?
Stationary white noise can be loosely defined as noise with equal energy
at all frequencies (ie. flat power spectrum). Since true white noise is
conceptual only (physically unrealizable), most analog methods generate
"pink", or "colored" noise, which has a nearly flat PSD over a range of
frequencies. Those that are based on thermal noise are generally
acknowledged to be very close approximations to true white noise for the
purposes of radio and microwave work. What is the frequency response of
this digital method?

>The shift register needs to be clocked at a frequency much greater than 20

|> feathers do you?

The league is good for many things. Forming the basis of debates is
one of them.

|> How about a much more inane explanation that relies on:
|> i) The licenses are printed on Tuesdays and mailed on Thursdays
|> ii) The database info is available on-line through selected channels
|> such as terminals the Library in W DC.
|>
|> So, if an application is processed on Tuesday after the print run, the
|> license will not be printed till the following Tuesday, mailed on Thursday
|> be in the ham's hand as late as the following Tuesday. Two weeks. And
|> all this time the call sign, name etc is available. How about that?

Well, if you had actually bothered to COMPREHEND my posting, just not
read it, you would have concluded this was not possible because:

1. I stated that I received my "congratulations" letter 4 weeks before
I received my upgraded ticket, and

2. My license was processed (according to date on license) one week
before I received it.

Ergo (hence, the comprehension...)

A. Since my upgrade was not physically processed by the FCC until
three weeks after I received my "congrats" letter, then either

1. Someone along the line is selling names, or

2. The FCC has a "leak" and someone there reads all
incoming applications and sells the names
weeks before.

Its simply not possible to know that I upgraded until the FCC
processes my paperwork (unless #1 above). Since AES knew I
upgraded weeks before the FCC processed my paperwork, how else
do you explain it?

Furthermore, are you naive enough to think that organizations
such as W5YI and the ARRL are "above" selling your name on a
mailing list?

I don't think it was the ARRL VEC that did it, because, as I
said before, my good friend Ed Hare stated that he doesn't
believe they do that, and I believe Ed. However, that
certainly doesn't mean other VECs like W5YI *DON'T* as well.

|> ... put back your tar brush...

I never "tar"ed the ARRL on this matter to begin with.
My original post never mentioned the League by name, and the issue of what
VEC it was never arose until someone posted a message ASKING.

Geeze, you post a simple damn observation, and a whole flame
war erupts as a result. I can't take myself anywhere....

Optoelectronics M1 Product Review - September 1993
Copyright (c) 1993 Brian Mork -- "not to make money, but to keep it that way for others."

>>> HISTORY
In June of this year, I distributed a product review of Optoelectronics' 3000A on Packet and Internet networks. It had bad dBm calculations. A July distribution fixed these errors and the text was cleaned up in other ways. More complete input sensitivities were reported. I now have an M1 counter and this review reflects the new experiences. A third version of the 3000A review is distributed concurrently.

>>> ABSTRACT
A 10 Hz - 2.4 GHz frequency meter could be a good addition to your shack if you don't have the functionality yet. The M1 is essentially a pared down version of the 3000A. At many places, this review assumes you have experience with the 3000A or have read that review. The 3000A I owned for a short while was returned because it was too tender and vulnerable to real-life conditions. Since then I've purchased an M1 and intend on keeping it. It is my recommendation to most people.

>>> CONSTRUCTION
The case is an extruded U-channel of aluminum with a flat top plate and end plates. The end plates screw into the U-channel with four screws, one of which is a machine screw. This one is apparently designed to provide a better "bite" into an interior copper shielding plate around the input. The gate LED on the M1 protrudes excessively from the LCD panel, unlike the 3000A LED, which was mounted to the same height as the switches and pushbuttons.

A single 6.5cm x 11.7cm circuit board lies under the faceplate, directly mounting the two buttons and five slide switches, which, in turn, poke through the front plate. A piggyback (piggyfront?) board holds the LCD display. There are two main chips--the OE10 vaulted in Optoelectronics' marketing literature and an SC87C51. The two main chips on the board have a white chalky substance around them as if they were hand soldered and the flux vapors weren't cleaned off. Hope it doesn't corrode. Probably 200 additional components, mostly surface mounted, also occupy the circuit board.

The M1 has four battery cells. Literature claims a recharge lasts about an hour less than the 3000A. My M1 ran for 6:50 on a full charge. The low battery indicators, although functional during the power-on check, never did illuminate during the battery run-down check. The counter just quit counting and a minute or two later the display faded.

A non-technical review of OE's products (covering more why you'd want them and what to do with them once you own them) written by Damien Thorn (Internet drdamien@delphi.com) appeared in the August 1993 issue of Nuts & Volts. He sounds like he enjoys his 3000A. I prefer the M1. The M1 costs $100 less.

>>> OWNER'S MANUAL
It's five sheets of photocopied 8-1/2" x 11", printed in landscape mode and folded in half. It's short, but operation of the M1 is easy, so maybe a lot isn't needed. I would propose inclusion of a few diagrams and tables rather than all linear text description. Included in the manual are:

Features description..... 2 pages
Specifications..... 1 page
Controls..... 2 pages
Data Interface..... 2 pages
Block schematic..... 2 blank pages
Using the Counter..... 4 pages
Battery & Power..... 1 page
Calibration..... 1 page
Warrantee..... 1 page
Service & Return..... 1 page

A loose sheet of paper gives an overall Block schematic.

The max input ratings match the 3000A. The 1 Mohm inputs handle a maximum on the order of 50 volts AC+DC (specified as 100 V RMS in the product literature flyer).

The 50 ohm switches have MUCH less range! Be sure you *unplug* large voltage sources (such as TTL) before you slide the switch to the 50 ohm position. They handle a maximum of "+15dBm or 50 milliwatts". These numbers don't quite match by my calculation (+15dBm is 32 mW). The range corresponds to approximately 1.2 RMS in a 50-ohm system, corresponding to 3.4 volts Peak-to-Peak if the waveform is a sine wave. Accurate numbers need to be available.

I would suggest making no direct electrical connections to the 50 ohm amps. Only antenna type inputs should be used when the 50 ohm amps are selected. I've wrapped an 8" wire (snake like) around cordless phone antennas, and that works ok, but even this would be *way* to much for a 100W HF transmitter. Be careful and use the bargraph. Full scale bar graph ranges from 10-20 mV, depending on the frequency. This covers a large range than the 3000A and seems to cover the range of real-life signals better, but it is less sensitive.

>>> OPERATION
Turn it on, holding down a Button 2 if you want the optional backlight to come on. When the backlight is on, I can hear a switching circuit bringing up a high voltage for the luminescent display. It turns off after 10 seconds of inactivity and comes on again when some button is pressed or

frequency is acquired.

Button 2 selects the gate time (resolution). With a slide switch, you select either 1 Mohm (Hi-Z) or 50 ohm (Lo-Z) amplifiers. The M1 has only one input, and is incapable of period, ratio, and interval measurements.

If you select Hi-Z input, you can count 10Hz - 50MHz, with a claimed sensitivity of a few tens of millivolts, identical to the 3000A Input A.

If you select Lo-Z inputs, a signal strength bar-graph indication automatically appears and you must select one of two input ranges:

10MHz - 200MHz (3 stage amp)
10MHz - 2400MHz (2 stage amp, divide by 64 prescaler)

The M1's 50 ohm input covers the entire range 10-2400 MHz, whereas the 3000A allows selection of 10-220 MHz or 10-800 MHz on the A input and provides 500-3000 MHz on the B input. The M1 has slightly less advertised sensitivity (blank entries imply no published specification):

MHz	M1	3000A
10	5 mV	5 mV
150	0.3 mV	0.3 mV
200	0.45 mV	
400	0.6 mV	
800	3 mV	3 mV
1000	10 mV	1 mV
2000	5 mV	
2400	50 mV	
3000	60 mV	

The M1 bargraph has a full scale reading of 10-20 mV, whereas the 3000A has a full scale reading of 2-4 mV (dependent on frequency in both cases). It has ten RF bandwidth/display resolution combinations (same as the 3000A), but because it has only two RF ranges, each range has more gate time selections. I *still* don't understand what the sense is providing more than 6 digits of resolution with a 1ppm time base. This misleading "resolution" continues to be an Optoelectronics selling point and is inappropriately echoed by others.

In parallel with all the above input selections, two switches let you operate in either of four modes. I'll call them modes 00, 01, 10, and 11, representing whether FILTER and CAPTURE, respectively, are off (0) or on (1).

00 (FILTER off, CAPTURE off) Operates as described above. This is the single mode of the original Model 3000. Meter shows updated values even if it's counting noise. Gate light blinks continuously.

10 (FILTER on, CAPTURE off) Computer logic looks for meaningful oscillations, providing a new frequency value only if a legitimate

count is acquired. A higher level of filtering can be selected by holding down Button 1 during power up.

11 (FILTER on, CAPTURE on) Same as mode 10 except nothing happens until you arm the system by pressing Button 2. Once you do this, the word "frequency" flashes on the display until a legitimate count is snagged. A three-memory buffer (the display plus two more) keeps previous values. They are referred to as X, A, and B. X contains the most recent, A the second most recent, and B the third most recent. When a fourth value is snagged, the value in B is lost.

01 (FILTER off, CAPTURE on) In this mode, no measurements are taken. Button 2 rotates between the three memories recorded in mode 11.

>>> PRODUCT SUPPORT
Optoelectronics employees are professional and are helpful on the business end of things. Raw technical knowledge and, thus, the ability to help diagnose problems or give application suggestions is, in my experience, limited to only one person. See the 3000A product review for details of my experiences.

>>> REAL LIFE
I have two regimes of interest for which I want this counter. The first is modem and ultrasonic work in the KHz to 100KHz range. The second is radio VFO work, requiring MHz up to GHz. I characterized the M1 with a 20 Hz - 1 MHz Heath EUW-27 function generator, my Yaesu 757GX/Vectronics VC300DLP combo, an ADD8000 analog/digital prototype station, a Fluke 8000A DVM, and a Solaritron CD1400 oscilloscope.

--- low frequency ---
For the less than 10MHz work, the Hi-Z inputs must be used. I have a 2 MHz TXCO standard in my shack that has an output floating on the back side of a little toroid transformer. It gives out approximately +-0.8v with an output resistance of 100 ohms. The 2 MHz output shows up as a stable 1.999947 MHz on the M1. The waveform was not symmetric, but it was very stable and clean from other high frequency hash. It looked sort of like this:

```
-. .---. The waveform stayed the same regardless of
| | | whether the M1 was hooked up. The M1
| --. | -- counted the same regardless of whether the
./ ./ o'scope was hooked up. P-P voltage was 1.7v.
```

The 1 MHz TTL tap from the TXCO was a square wave ranging between 0 and 3.8 volts. Regardless of the M1 filter selection, it showed a stable frequency of 0.999974 MHz. These tests came out MUCH better using the M1 than the 3000A.

I next fired up the Heath variable frequency / variable amplitude function generator. I needed large amplitudes--WAY above the specified 10-20 mV. The procedure used was to start at about 1 V and decrease the voltage. If a stable count held, I reduced the PP voltage until spuratic

readings were obtained. The resultant measured PP voltages (asterisks indicate I never was able to get a good count):

Frequency sine square
--------- -------- --------
20 Hz * 35 mV
200 Hz 2.7 V 12 mV
60 KHz 1.8 V 15 mV
500 KHz 70 mV 20 mV

In all cases, the scope showed clean signals with no high frequency hash. For the two lowest frequency square wave measurements, hand placement while adjusting the voltage level significantly affected the required amplitude. Best (lowest) voltages are reported above.

The results for the sine wave signals are about 2x worse than the 3000A Input A response, but incalculably better than the 3000A Input B response. The M1 responded well to square waves whereas the 3000A did not.

I own a PK232 radio modem and decided to see if the meter was good enough to tune the audio tones. With nominal output from the PK232 (130mV RMS on the Fluke, good to 10KHz), I measured the tones with the default digital filtering of the M1 engaged. The 2200Hz tone showed as 2272+-1, the 1200 Hz tone showed as 1278+-9 (14 samples each, standard deviation reported).

--- high frequency ---
My RF test goal was simple. How reliable is measurement of my 757GX VFO? Working at 15 MHz, the Lo-Z input (only one suitable for this measurement) has an advertised sensitivity of 5 mV. I used a scanner antenna, supported about and inch away from a resistor I used as a load. The counter's bargraph was about 3/4 scale deflection from the ambient noise. The transmitter's VFO was allowed to stabilize or about half and hour and then brought to within 5 Hz of WWV's 15 MHz carrier. Transmitting 25 watts into the dummy load resistor, the counter hit full scale bargraph and displayed a frequency of 15.012 MHz. At 100 watts, the M1 displayed 15.001 MHz. Accuracy doesn't look so good under reasonable ham shack conditions, but the M1's 50 ohm input is at least usable whereas the 3000A's was not under similar circumstances.

>>> OPTIONS
You can buy a precision (0.2ppm vs 1.0ppm) timebase for an extra $100. Again, I stayed away from the 0.2 ppm precision timebase because specified aging would quickly degrade me back to the standard 1.0 ppm timebase. Additionally, I don't often need to know the last 2 Hz on a 10000000 Hz signal. As with the 3000A, the electroluminescent backlight is no longer an option-- the standard price is just higher.

>>> GOTCHAS
The serial interface is unidirectional. You send it a CR and it sends back 10 digits and a decimal point, in ASCII, 4800bps, 8 bits, no parity, 1 stop bit. It provides only the most recent number, with no indication

of whether this is another sample or the same number it just sent you after your last request. The interface can sink 1.6mA and source 0.06 mA.

Excellent amplifier sensitivity isn't everything. For decent counting, the signal you're monitoring must exceed the noise (combination of *all* other RF signals in the bandpass of the selected amp) floor by a claimed 10-15 dB. Specified sensitivity ranges from -57dBm to -13dBm. The input amp is limited to +15dBm. Ambient noise, including FM stations hovers about 3/4 scale on the bargraph when using an AR100XLT scanner antenna. Since the scale goes from -56 to -26 dBm, that's roughly a -33 dBm noise floor. Adding in the 15 dB overhead for a good measurement gives -18 dBm required signal. That would be 8 dBm above full scale, roughly 3 bar segments. This matches real life experience of the Yaesu 757GX related above.

The Hi-Z M1 input handles square waves better than sinusoids, whereas the 3000A showed terrible susceptibility to harmonic lock-on with non-sinusoidal waveforms -- both for me and the other friend spoken of above. He was trying to measure a frequency multiplying class C VFO and confusion as to which stage was being measured made the meter unusable. On another project, anywhere near a 50 KHz switching power supply, measurements were dominated by it. He asks "would I have this problem with a TEK or HP counter?" I don't know. I know my extensive experience with a 7226B counter in the 1 to 10 MHz range showed none of the bizarre behavior seen with this (and the 3000A) high sensitivity counter. Triggering of these counters is just erratic. Perhaps a DC trigger with variable threshold adjustment would be better. OE's digital filtering DOES help, but often the filter is fooled or else specified sensitivity is unattainable.

In Damien's review, he emphasizes the importance of a limited bandwidth antenna. Take this recommendation seriously. The M1's bargraph covers the range of real-life, on-the-air signals much better; it actually moves around rather than being saturated most of the time. The required 10-15 dB spread between noise and desired signal appears as 3 to 4 bargraph segments on the 16-segment display. The 3000A and the M1 appear to be optimized to do off-the-air measurements. In this role, using the M1, I've had fun snagging frequencies used by all sorts of Air Force base agencies in a manner just as Damien described. In the lab, using hard-wire connections, the Hi-Z inputs of the M1 don't measure up to specs and the 3000A inputs seem downright unusable.

>>> SUMMARY
Paying $100 less for a M1 balances against having only one input and loosing the extra modes of operation. Because these extra modes relied on the unreliable Hi-Z inputs, I don't miss them. I am extremely interested in hearing reports from others in the field that have success or failure with the M1 and 3000A Hi-Z inputs.

Make sure the screws to the PC case make good electrical contact with the
case, AC line filters on both computer and radio,
AND Grounding, grounding, grounding.

One good solution that a local ham used was to switch to a laptop. He said
the noise went away completely.

Optoelectronics 3000A Product Review - September 1993
Copyright (c) 1993 Brian Mork -- "not to make money, but to keep it that way for others."

>>> HISTORY
June 19th of this year, I distributed a product review of Optoelectronics' 3000A handicounter. It had bad dBm calculations. A 29 July 1993 distribution fixed these errors and the text was cleaned up in other ways. More complete input sensitivities were reported. This version includes subsequent perspective after use of OE's M1 handicounter (see the M1 product review of this same date -- it is a pared down version of the 3000A). Damien Thorn (Internet drdamien@delphi.com) wrote a non-technical review article on several of OE's products (covering more why you'd want them and what to do with them once you own them) that appeared in the August 1993 issue of Nuts & Volts.

>>> ABSTRACT
A 10Hz-3GHz feature-laden counter/timer/frequency meter could be a good addition to your shack if you don't have the functionality yet. There are some disallowed configurations that give you less than you may think if you casually read the laundry list of features. Input specifications need more attention or at least acknowledgement of real-life problems.

>>> CONSTRUCTION
The case is an extruded U-channel of aluminum with a flat top plate and end plates. The end plates screw into the U-channel with four screws, one of which is a machine screw. This one is by the A input, apparently designed to provide a better "bite" into an interior copper shielding plate around the A input.

A single 9.2cm x 12.6cm circuit board lies under the faceplate, directly mounting the three buttons and six slide switches, which, in turn, poke through the front plate. A piggyback (piggyfront?) board holds the LCD display. There are two main chips--the OE10 vaulted in Optoelectronics' marketing literature and an SC87C51. My 8751 is labeled M1.3000A 5.20.93 VER 2.1 with a little sticky label. The two main chips and a transformer on the board have a white chalky substance around them as if they were hand soldered and the flux vapors weren't cleaned off. Hope it doesn't corrode. Probably 200 additional components, mostly surface mounted, also occupy the circuit board.

The six batteries are stuck to the back shell (double sided tape?). The two battery wires terminate on the circuit board with a separable connector. The batteries' weight and the solid aluminum case give the unit a solid feel. Neither the wall-wart charging unit or the 3000A itself have

a charging light. For the extra resistor and LED, I would like one. Too many times I've had some master switch, wall switch or loose plug inadvertently negate my effort to charge batteries. And when do you find out? When you needed the unit to be charged.

There are three plastic sheets stuck on the external top and face of the unit. My top piece was peeling off slightly. The front bottom one was crooked enough to let Button 2 not bounce back up. Slight trimming fixed that. I can't tell if the white lettering is applied on top of the plastic or behind the plastic. I hope it's behind so that they don't wear off. All the aluminum is painted black --not drippy, but it has the appearance of thick enamel. Personally, I would much rather have black anodized so there would be no possibility of chipping paint.

>>> OWNER'S MANUAL
It's five sheets of photocopied 8-1/2" x 11", printed in landscape mode and folded in half. It's short, but operation of the 3000A is easy, so maybe a lot isn't needed. I would propose inclusion of a few diagrams and tables rather than all linear text description. Included in the manual are:

Features description..... 2 pages
Specifications..... 1 page
Operation..... 2 pages
Data Interface..... 2 pages
Block schematic..... 2 pages
Operation hints..... 4 pages
Battery & Power..... 1 page
Calibration..... 1 page
Warrantee..... 1 page
Service & Return..... 1 page

A loose sheet of paper describes how to turn on the backlight option.

I wanted to know what I could plug into this meter. Nowhere in the specs or owner's manual are the max input ratings. After talking with the factory (toll call is small compared to the purchase price, but still is annoying), I find the 1 Mohm inputs can handle a maximum on the order of 50 volts AC+DC. The Model 3000 (not the 3000A) specified 100V RMS as the maximum. Anyhow, I feel good about plugging in TTL.

DON'T plug TTL into the inputs if the 50 ohm switch is selected! More subtly, be sure you *unplug* it before you slide the switch to the 50 ohm position. The same phone call revealed that the 50 ohm inputs handle a maximum of +15 dBm. That's 1.2 volts RMS in a 50-ohm system, corresponding to 3.4 volts Peak-to-Peak if the waveform is a sine wave. Another user was told by a factory technician that "a 5W HT connected to the counter input for a short time would not damage the counter." Five watts is about +37 dBm! Does the amount of time matter? The correct numbers need to be in an Owner's Manual, especially since the warranty excludes "damage to the input circuitry from the application of an excessive input signal."

I would suggest making no direct electrical connections to the 50 ohm amps. Only antenna type inputs should be used when the 50 ohm amps are selected. I've wrapped an 8" wire (snake like) around cordless phone antennas, and that works ok, but even this would be *way* to much for a 100W HF transmitter. Be careful. Full scale bar graph ranges from 2 - 4 mV, depending on the frequency. If you stay on scale, you're safe, but most of the valid input window is above "full scale." In the range 4 mV to approximately 1200 mV, you'll be increasing power "in the blind."

>>> OPERATION
Some non-obvious combinations of functions and inputs is the order of the day. This is kind of weird, but is intentional to give you the best sensitivity possible, using a number of specialized input amps.

Turn it on, holding down a Button 2 if you want the optional backlight to come on. Button 3 selects the gate time (resolution). With a slide switch, you select either 1 Mohm (Hi-Z) or 50 ohm (Lo-Z) amplifiers.

If you select Hi-Z inputs, Button 1 selects either/both A and B inputs. Button 2 rotates between FREQUENCY, PERIOD, INTERVAL, and RATIO. Input A measures only 10Hz - 50MHz, with sensitivity of a few tens of millivolts. Input B measures only 10Hz - 10MHz, with a sensitivity of better than ten millivolts.

If you select Lo-Z inputs, a signal strength bar-graph indication automatically appears and you must select one of three input amps:

Input A only, from 10MHz - 220MHz (0.3 to 5mV sensitivity)
Input A only, from 10MHz - 880MHz (divide by 4 prescaler)
Input B only, from 500MHz - 3000MHz (new amp, div by 16 prescaler)

On one of OE's product literature flyers, they speak of a 1-200MHz input. A phone call confirmed that this range exists only as a typo on the product literature flyer.

In parallel with all the above input selections, two switches let you operate in either of four modes. I'll call them modes 00, 01, 10, and 11, representing whether FILTER and CAPTURE, respectively, are off (0) or on (1).

00 (FILTER off, CAPTURE off) Operates as described above. This is the single mode of the original Model 3000. Meter shows updated values even if it's counting noise. Gate light blinks continuously.

10 (FILTER on, CAPTURE off) PERIOD, INTERVAL and RATIO are disabled. Computer logic looks for meaningful oscillations, providing a new frequency value only if a legitimate count is acquired. A higher level of filtering can be selected by holding down Button 3 during power up.

11 (FILTER on, CAPTURE on) Same as mode 10 except nothing happens until you arm the system by pressing Button 2. Once you do this, the word "frequency" flashes on the display until a legitimate

count is snagged. A three-memory buffer (the display plus two more) keeps previous values. They are referred to as X, A, and B. X contains the most recent, A the second most recent, and B the third most recent. When a fourth value is snagged, the value in B is lost.

01 (FILTER off, CAPTURE on) In this mode, no measurements are taken. Button 2 rotates between the three memories recorded in mode 11.

>>> PRODUCT SUPPORT
In some sense, there's not much to support. The meter either works or it doesn't. Operation is very straight forward. I don't call to harass service personnel and I *do* read the manuals first. I did call to find out about the input characteristics as discussed above and was, well, not impressed.

Female answers and I ask for service or tech help. After 2 minutes, the line drops dead. I call back. Same female passes me on to Ray quickly this time. I ask Ray about input specs. He says that, yes indeed, that has been inadvertently left out of the manual. Stand by. Three minutes. Ray comes back with info. The 1 Mohm inputs are "plus 50 volt AC plus DC", the 50 ohm inputs are "plus 15 dBm." Yes, that's what I wanted! Follow up: What do you mean by 50v AC+DC?" Hmmm. He didn't know; that's what the engineer told him. Ok. Is it capacitively coupled? Uhh.. the inputs go right into a "MAR6 amplifier." Could you please send me a copy of just the front end prior to the MAR6 amps? Pause... "Well, there's a capacitor that goes to ground." Yes, that's the kind of info I want. What size? Maybe a pf or two? "It's a 50v electrolytic." Eeee wrong person. Would he send me just a copy of the front end schematic? "No, we don't have anything like that I could send you." Ok, well thanks anyhow. Bye.

In retrospect, I should have asked for the engineer who was sourcing this information. Inputs are listed in the specifications as 1MHz, 30pf. This seems believable since it mimics a normal oscilloscope input. But are they AC or DC coupled? With what size, type & rating capacitor? I was hoping to use the INTERVAL or RATIO mode with Input B held open so I can count events on Input A. At Dayton a year back, I spoke with a man named Bill Owens who seemed to have a good handle on the company's history and the capability of the product line. I wish his knowledge was conveyed better to potential buyers.

>>> REAL LIFE
I have two regimes of interest for which I want this counter. The first is modem and ultrasonic work in the KHz to 100 KHz range. The second is radio VFO work, requiring MHz up to GHz. I characterized the 3000A with a 20Hz - 1MHz function generator, my Yaesu 757GX/Vectronics VC300DLP combo, and a Hewlett-Packard VHF/UHF generator.

--- low frequency ---
For the less than 1MHz work, the Hi-Z inputs are used. I have a 1MHz TXCO standard in my shack that has an output floating on the back side of

a little toroid transformer. It gives out approximately +-0.5v into my 500 Kohm load (3000A and oscilloscope in parallel). My 1MHz output shows up as a stable 6.00 Mhz on the 3000A. What?! Yes. Regardless of the filter selection (none, medium, or full), six megahertz kept being displayed. The waveform was not symmetric, I'll give that much, but it was very stable and clean from other high frequency hash. It looked sort of like this:

```
|\ |\ The waveform stayed the same regardless of
0 V___| -- | -- whether the 3000A was hooked up. The 3000A
| | | | counted the same regardless of whether the
-. .---. o'scope was hooked up. P-P voltage was 1.5v.
```

The 1MHz output from my TXCO was a square wave ranging between 0 and 2 volts. Regardless of the 3000A filter selection, it showed a frequency of 3.0 MHz. Another user working on a homebuilt oscillator also reports extreme sensitivity to harmonics. This harmonic sensitivity, combined with extreme sensitivity makes the instrument virtually useless when using any frequency multiples in your project: you won't know which signal is being locked onto.

I fired up a variable frequency / variable amplitude function generator and o'scope combination. The generator went to the scope with a BNC T-tap half way that plugged into the 3000A.

Using the A input, I needed incredulously large amplitudes--WAY above the specified <20 mV. Using the B input was even worse. The procedure used was to start at about 100 mV and go down first. If a stable count held, I reduced the PP voltage until spuratic readings were obtained. If 100 mV was giving spuratic or known-to-be-wrong numbers, I turned the amplitude up until a stable reading was obtained. The resultant measured PP voltages (asterisks indicate I never was able to get a good count):

Frequency	Input A	Input B
20 Hz	2 V (0.78 VRMS)	*
200 Hz	1 V	*
350 Hz	0.6 V	*
60 KHz	50 mV	4 V
500 KHz	<10 mV	1 V

Square wave counting was similar. For instance, 2 V PP was needed at 10 KHz to get a good count with Input A. In all cases, the scope showed clean signals with no high frequency hash. Testing at another ham's shack who had a fancy HP generator and scope yielded the same results within 10%. Stable operation of the Hi-Z input is mandatory to use the interval and period functions of the 3000A, and this condition does NOT seem to be met. I consider the non-frequency modes to be historical carry-overs from the product lines' 7226 counter heritage rather than useful features of OE's OE10 custom chip.

I own a PK232 radio modem and decided to see if the meter was good enough to tune the audio tones. With full output from the PK232 (about 0.5v PP on the scope, giving 140mV RMS on a Fluke DVM good to 10KHz), I stuck the tones into Input A and Input B with Hi-Z amps selected. The 2200Hz tone showed as 2265+-5Hz (A) and 23KHz (B), respectively. The 1200Hz tone showed as 1820+-15 (A) and 31KHz (B), respectively. No, I did not adjust the PK232.

--- high frequency ---
My RF test goal was simple. How accurate is my 757GX VFO? Working near 10MHz, the Lo-Z A input (only one suitable for this measurement) has an advertised sensitivity of <5mV. With a 12" dangling wire near the coax out the back of the radio, the counter was dominated with a signal at approximately 104 MHz (103.9 FM?). Later tests 25 miles across town again showed that with a wire pigtail antenna, it was being dominated with this station. I bought an RS15-577B FM trap and put it in line. Now a 68 MHz interference dominates, probably the local Channel 4 TV station.

I went back to the Hi-Z inputs. At this point I was trying to determine the electrical length of some coax. A 1/4 wavelength of coax is terminated with a short circuit, and fed in parallel with a 50 ohm load with a mid level RF power (see page 74 of the June 93 QST; the goal is to get a 1:1 SWR). The high current node at the terminator is the point I was trying to pickup RF with the 3000A. Twenty turns of perfboard wire around a pencil stepped up the voltage enough for the meter to register stable counts when the pickup coil was positioned near the end of the coax shorting wire loop.

Characterization of the three 50-ohm amps with an HP generator showed solid frequency locks at these random check points:

Fast Amp	Middle Amp	Slow Amp
800MHz, -47dBm, 1.0mV	100MHz, -65dBm, 0.12mV	150MHz, -60dBm, 0.22mV
1000MHz, -43dBm, 1.6mV	450MHz, -54dBm, 0.45mV	

Attempts to do PERIOD, INTERVAL, and RATIO measurements were unsuccessful due to the skittish behavior of the Hi-Z inputs.

>>> OPTIONS
You can buy a precision (0.2 ppm vs 1.0 ppm) timebase for an extra $100. What used to be a $45 backlight option now seems to be a non-optional extra expense. September advertisements still quote the lower price for the standard model, but the sales personnel won't sell one that way.

--- time base ---
There are two reasons why I did not want to buy the precision time-base option. One is because a RATIO mode is provided and I already have a precision 10MHz TTL oscillator scavenged from an old LORAN navigation board. 10MHz also happens to be the maximum frequency Input B accepted in the ratio mode (all ratios are A/B). What a coincidence. Works for me!

The second reason is simply that the 1ppm timebase is specified to age at a rate of 1ppm/year. A 0.2 ppm option would be degraded to the 1.0ppm option in only about 10 weeks. In any case, I usually don't need to know the last 2 Hz on a 10000000 Hz signal.

--- backlight ---
When it's on, I can hear a switching circuit bringing up a high voltage for the luminescent display. It turns off after 10 seconds of inactivity and comes on again when some button is pressed or frequency is acquired.

It looks good. Worth $45? The native display is plenty readable and the extra light actually makes reading it harder from angles "above" the counter.

>>> GOTCHAS
The serial interface is unidirectional. You send it a CR and it sends back 10 digits and a decimal point, in ASCII, 2400bps, 8 bits, no parity, 1 stop bit. It only works in FREQ mode. It provides only the most recent number, with no indication of whether this is another sample or the same number it just sent you after your last request. The interface can sink 1.6mA and source 0.06 mA.

Excellent amplifier sensitivity isn't everything. Sometimes it's even a burden. For decent counting, the signal you're monitoring must exceed the noise (combination of *all* other RF signals in the bandpass of the selected amp) floor by 10-15dB. Specified sensitivity ranges from -57dBm to -11dBm. The input amp is limited to +15dBm. Ambient noise, including FM stations hovers about -11dBm. Play with those numbers and you'll see that the window for a good count can be pretty small. Try to measure a cordless phone near your transmitter or computer monitor? Probably not. If you live near a broadcast station, good luck. I don't consider these numbers a design flaw given the intentionally wide frequency range of the amps, but it definitely affects your day-to-day operation.

In Damien's review, he emphasizes the importance of a limited bandwidth antenna. Take this recommendation seriously. Wide range frequency coverage means susceptibility to noise. A bandwidth limiting antenna helps mitigate this problem.

>>> SUMMARY
The at-your-door price for a 3.5" x 5" circuit board seems a bit high, but the counter is specified to do what I need it to do, plus a few options. Resolving the skittish Hi-Z input problems is a must. The M1 gets around this by simply not having multifunction capability. Paying the extra $100 for a 3000A with specified capabilities that in real life are marginally usable deserves a second thought.

All models are available only direct from the manufacturer in Florida. Contact Optoelectronics: 5821 NE 14th Avenue, Ft Lauderdale, FL 33334. 800-327-5912 or 305-771-2050. FAX 305-771-2052. Makes you want to dial ..2051 and see who you get, doesn't it? :)

>Gary> 2004 when commercial broadcast will shut down it's VHF
>Gary> operations and go strictly to UHF HDTV.
>
>Is this carved in stone? Is broadcast VHF doomed? Not that this
>wouldn't be a good thing, but I haven't heard before this?

This is the working plan announced by the FCC. Provided the HDTV transmission standard is worked out in detail and equipment is available, HDTV broadcasting is supposed to start in 1996. The 1996 Olympics in Atlanta is supposed to all be done in HDTV. There'll be an 8 year phase in period, and in 2004 the last VHF NTSC transmitters will be shut down. It appears certain that a spectrum compatible digital HDTV standard will be ready, and the FCC has decreed that all HDTV will be at UHF. They've got a plan to allow VHF broadcasters to simulcast NTSC on their existing equipment, and HDTV on a new UHF assignment for the phase in period.

>Gary> What some in the industry are hinting is that it may not be cost
>Gary> effective to go to HDTV UHF transmission when the time
>Gary> comes. Instead they may just rent transponder time and become
>Gary> strictly cable channels.
>
>Does that mean they'd be broadcasting HDTV on the cable of NTSC? I'd
>love to see NTSC dissapear and be replaced by a good HDTV format...

There are three remaining problems, and they are expense, expense, and expense. It'll be very expensive to convert existing broadcast facilities to HDTV. Estimates range from $75 to $150 million per station. And it'll be very expensive to convert the existing receiver stock to HDTV. Estimates range between $2 and $5 billion dollars above normal replacement costs. HDTV receivers are about 6 times as expensive as NTSC receivers. And finally, there's no inventory of HDTV programming. Most existing programming is shot to tape in NTSC. Some old programming, such as _I Love Lucy_, was shot on 35mm film, so it's possible to use it with HDTV equipment. But most programming, _The Cosby Show_ for example, was shot in M2 tape format, is in lower resolution format and in an incompatible aspect ratio. There's not enough resolution there to convert it to HDTV. Old program stock is critical because there isn't enough new programming generated each year to fill the time available for broadcast. Movies are an alternative,

but movies don't draw the ratings of a good sitcom, and ratings
are critical to broadcast revenues. The broadcaster's product is
an audience that he sells to an advertiser.

So, assuming that the receiver stock doesn't turn over rapidly,
and assuming that most available programming would look gross
if blown up to HDTV by transcoding (it does), some broadcasters
are seriously looking at becoming a NTSC cable service instead.
The real sticking point is that a majority of non-techie consumers
say they're perfectly satisfied with the pictures they're getting
now. Thus they are likely to be resistant to paying a sharp premium
for HDTV receivers.

I *think* that what will actually happen is that most broadcasters
will buy a new transmitter and a transcoding box to let them
broadcast *simulated* HDTV in the 1996-2000 timeframe. That's only
about a $5 million expense if they can share the same tower, and a
continuing extra $12,000 a month in power consumption. Of course
most pictures will be gross. If receiver penetration and programming
stock begins to look promising by 2000, they'll then start converting
their plants and use a transcoder to generate simulated NTSC for the
remaining four years of their VHF transmissions. That'll be the worst
time because a mixed plant gives me the heebie geebies. There'll be
transcoder boxes everywhere, incompatible duplicated routing systems,
editing systems, etc. Plant timing will be a nightmare. If receiver
penetration remains low, and/or programming remains unavailable, then
they'll think about becoming cable providers instead. More likely,
they'll lobby the hell out of the FCC and Congress to extend the
changeover period.

The *plan* is to give VHF to land mobile services after the phase
out. I don't expect amateurs to grab any of the vacated spectrum.
But it *may* slightly relieve pressure on existing amateur spectrum.
The brightest note for hams will be the reduction in TVI from their
transmissions. The digital transmission format is resistant to
analog signals and multipath. It naturally includes an FEC component.
So amateurs should see reduced complaints about TVI. The digital
compression chips may also be useful to amateurs in experimenting
with new modes of operation. Lower DRAM prices and wide availability
of high resolution displays will eventually help the computer people
after the initial shortages likely to occur during the ramp up of
receiver production. Japan will make a fortune off of this.

2958. Stop hunter Harrassment in Michigan

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-29 19:43:29 UTC
From: swood@vela.acs.oakland.edu
Message-ID: <swood.749331809@vela.acs.oakland.edu>
Source record: 275675
Cross-posted to: mi.misc,alt.great-lakes,rec.radio.amateur.misc

Last year was the first test of the new Michigan Hunter Harrassement legislation. This year is bound to be frought with its share of activism.

If you are interested in helping out in the fight to stop the intentional intervention (without respect to the law) in a legal and ethical activity in the state of Michigan, I implore you to contact me for more information.

I am interested in hunters and hunting supporters who would be willing to give up some time this weekend to take a walk in the woods. Last year saw the highest level of illegal activity in the Pickney and Waterloo State Game areas. However, the more eyes open the better. If nothing else it is a great chance to learn about nature, meet some great folks and spend a little time in the woods.

I have also posted this information to a local Amateur radio BBS as I am trying to recruit Hams to monitor local frequencies as well as help report violations. I am going to be out there hunting from about 7am to 5pm as camp hours permit. Some time will be spent meeting hunter's and state conservation officers as well as patrolling (I like to think of it as scouting)

If you or anyone you know is interested in helping out, please have them get ahold of me at (313) 394-0351. If you plan on journeying into the woods this weekend, be sure to wear your highly visible hunter's "flame" orange if you are not actually deer/turkey/crow hunting. If you are going hunting, then good luck and may a activist not cross your path.

Scott Wood

2959. NI-CADS

Newsgroup: rec.radio.amateur.misc
Date: 1993-09-29 19:47:33 UTC
From: pfeiffer@humboldt.kent.edu
Message-ID: <28cool$dc0@usenet.mcs.kent.edu>
Source record: 275674

I have some questions about ni-cad batteries. If there is a more
appropriate place to post could someone tell me where please?

I have been told that you should cycle nicads (let the run down
and then recharge) to get the best performance out of them.
Should this really be done?
if yes:
Should it be done once when new?
Should it be done regularly?
Should the discharge be fast or slow?
Should the charge be fast or slow?

If no:
How should ni-cads be used to optimize there performance?

Also for typical AA nicads what is the norm. charged voltage?

Thanks
DHP

>>
>I'm not familiar with some of the terms (e.g. Lecher) you're using,
>and your brief description wasn't enough to allow me to fully
>understand your application. Therefore I cannot address your
>problem directly.

Lecher wires are an open wire transmission line segment with a movable
short used as a impedance transformer. This was a common way to measure
the wavelength of a microwave signal in the old days. Wavelength was
read directly from an attached meter stick when the short produced a
dip on a diode detector. Using them for a tank circuit is a straight
forward application of the Smith Chart.

[list of reasons an analytic solution is difficult deleted]

I'll second that list. This problem is not easily amenable to
analysis. There are a few special cases where it's somewhat
easier. Look at a re-entrant post cavity design. Use the plate
output capacitance as the post loading capacitor. That'll get
you a resonant design. Unfortunately it tells you little about
the position or shape and size of the output coupling loop.
That's going to be cut and try. With ordinary open cavities,
the major problem is parasitic responses. The usual cure is

to place passive "paddles" in the cavity at the proper point
to break the undesired resonant mode. The tube makers usually
supply a tech note with a working cavity design for their
product. You can often just scale it to your frequency, but
you'll still have to use some cut and try to get the final
circuit to work properly.

How about TR8GA? Worked several years ago, but never able to find a good QSL route. Anyone ever get this card?

And how about 6Y5/K6RR, Robert O. Roaney? I worked him some years ago in Jamaica (my only 6Y5 QSO EVER!), and sent SASE to his US call. Anyone ever know where he is/how to get his card/where he went/is he still alive?

In a previous article, jpb@donner.cc.bellcore.com (brogan,james p) says:

>I am considering buying a TS50 for mobile and some portable operation. Am
>looking at the Outbacker HF Mobile Antenna also. Does anyone use this combo?
>Are U using the AT50, if not, how is the bandwidth without adjustments. What
>type of Outbacker or other HF antenna are u using and how do you like the
>results?
>
>Jim (KZ2H)
>
>

Well, The TS50 is a nice radio if you have the money. A friend has
been using one in his truck for a while and loves it.

As for teh outbacker, it is a very expensive waiste of money. I have
just finished and article on HF mobile, a large part of it was
testing mobile antennas. Let me tell you that after using a
friends (which he has with the TS50), I sold my Hustler sytem and
purchased the GLA (original) Texas Bugcatcher. The Bugccher
is about 4 s units better in a good many cases than the Hustler. The
Hustler was a BUNCH better than the Outbacker, the Ham Sticks were
a lttle better than the Hustler (but you probably won't notice the difference
except side by side). In the Mobile handbook they rated field
strenght and the Outbacker was at the very bottom of the list
Bugcatcher was first.

If you are looking for a multi-band , the Spider performed about
as well as the ham sticks and hustler and for about $100 you
can get 10,25,20,40 meters and not have to get out of your car
to change bands.

With the Outbacker you have to wind a wire around and plug it in for d
different bands, also if you go to 80 meters you will most likey
have to change the lenght of the top stinger (means you have to
retune going from 80-40, or on different parts of 40).

Can't see shy people will spend so much money, except the antenna
is relatively smaller, cute and REAL RUGGED.

I sat for the exam on 3 August and my ticket arrived yesterday,
exactly eight weeks later. Looks like the log jam has broken.
To the FCC's credit, at the time I took the exam they were quoting
a 90 day turn around. They don't seem to have the bueauracratic
disease of telling you what you want to know, only to disappoint you
later. Considering their funding situation, that's nice to see.

Source record: 275592

/\

POTENTIAL MAJOR SOLAR FLARE WARNING

ISSUED: 23:00 UT, 29 SEPTEMBER

/\

PRIMARY CANDIDATE FOR HIGH SOLAR ACTIVITY : REGION 7590 (N12E50@30/0000Z)

```
-------------------------------------------------------------------------
| ESTIMATED POTENTIAL MAGNITUDE OF ENERGETIC ACTIVITY OVER NEXT 7 DAYS |
|-----------------------------------------------------------------------|
| DAYS | C5.0 | M1.0 | M5.0 | X1.0 | X5.0 | >X12.0 |
|------|----------|----------|----------|----------|----------|------------|
|1( ) | 90 % | 60 % | 35 % | 10 % | 5 % | 1 % |
|3( ) G| 95 % | 65 % | 40 % | 15 % | 10 % | 1 % |
|5( )PG| 99 % | 75 % | 45 % | 20 % | 15 % | 2 % |
|7( )PG| 99 % | 80 % | 45 % | 25 % | 15 % | 2 % |
-------------------------------------------------------------------------
```

DAYS = Number of days (from present) into the future (1, 3, 5 and 7 days).
(+) = Primary candidate region expected to GROW and DEVELOP.
( ) = Primary candidate region expected to STABILIZE or remain STABLE.
(-) = Primary candidate region expected to DECAY and SIMPLIFY.
(x)P = Possible proton and/or PCA threat. (x) may be one of (+), (-), or ( ).
(x)G = If a favorable major flare develops, a moderate to high probability exists that the event may be geoeffective.
xx % = Probability of activity equalling or exceeding the given x-ray class sometime over the next number of DAYS.
WLT = Data not applicable due to the West Limb Transit of the target region.

The above chart should be used as a guide only. It represents anticipated levels of activity based on current projections of region development. Actual conditions may, of course, differ from these projections.

SYNOPSIS:

Region 7590, at over 1,100 millionths, remains fairly complex. The magnetic delta configuration that existed just to the east of the large leader spot showed signs of decaying today, although a small delta in the trailer complex persisted. The region has been remarkably quiet over the last 48 hours. Should a trigger mechanism appear, or additional flux emerge within the group, an isolated major flare could be observed from this region.

This warning will remain active until 09 October when it will be allowed to expire. Updates will be posted, as necessary.

Hmmm....Ed, I really respect your opinions and knowledge....but I have found through extensive experience with Ten Tec rigs (presently an OMNI-C and a Corsair, started with them back in the early '70's with an Argo 505) that they hold up as well or better than any Japanese rigs I have owned (like my present TS 440, 530, former 520, etc). I have had good experience with Kenwood service, BTW. Ten Tec is much more helpful and open when I have a problem or question, though.

Anyway, I do not find Ten Tec lacking in quality (design is not something I can judge at a high level, but I am a demanding user!) in any respect at all. The Japanese rigs are pretty neat, and I like them, too, but I do NOT find them to be better in basic performance. (IF auto tuners, built in power supplies are important, well.....Ten Tec doesn't do it).

Just my opinion.

EAST-WEST DATA LINK

The equipment has been installed at the Perth and Sydney ends
of the data link and all that remains is to commission the
short link between the Perth Packet Network and the earth
station. Joe has been attempting to get the link going and we
expect the remaining bugs should be eliminated within a very
short time.

GASPAR

The WAADCA BBS project (Project GASPAR - GAteway Station for
PAcket Radio) is making progress. The 19 inch rack mount will
be repainted this coming weekend and will be installed soon
after in the Eric Smith Room at the Wireless Hill Museum.

The committee has decided to procure a commercial dual-band 2
metre and 70cm antenna rather than to home-brew this item. The
2-metre Philips 828 and TNC for the forwarding channel are
finished and bench tested. A 70cm transceiver and TNC for the
UHF link are available but will take a little more work to get
going.

The HF side of the station has been set back by the inability
to get the ex-commercial rig going on 20-metres. However we
expect to take delivery in the near future of a Collins

synthesised commercial unit which will be placed into service in its place. 20-metre forwarding is expected to utilise a yagi antenna. The 12 volt power supply still also needs some refurbishment before it can be placed into service.

We would like to put a RTTY port on air as soon as possible using our existing RTTY modem driven by the RTTYGATE software co-residing on the packet BBS computer. To achieve this we are seeking the donation of another FM828 transceiver. We already have crystals for 146.6MHz.

We also need some help from a licensed electrician to wire the rack into the building power supply to eliminate the risk of well-intentioned museum staff turning the system off with the other displays at the end of each day.

If you are interested in helping out with an FM828 or electrical expertise, please leave a message for Joe Nevin at VK6BBS.

Special thanks to Clem VK6CW for carrying the Perth Gateway service so patiently while GASPAR slowly matures.

AGM (WAADCA)

The club's annual general meeting is scheduled for 6th October. All members and visitors are welcome. There have been many new members joining and attending meetings regularly throughout the year and this would be a perfect opportunity for some of you to formalise that involvement through a committee position.

That's all for this week.

CQ/RTTY Journal WW RTTY Contest September 25-26 (concludes)

QSO Points: One (1) QSO point for contacts within your own country. Two (2) QSO points for contacts outside your own country but within your own continent. Three (3) QSO points for contacts outside your own continent.

Multiplier points: One (1) multiplier point for each US state (48) and each Canadian area (13) on each band. One (1) multiplier point for each DX country in the ARRL and/or WAE lists om each band. NOTE: KH6 and KL7 are country multipliers only - not state multipliers. One (1) multiplier point for each CQ Zone worked on each band - a maximum of 40 per band.

The 13 Canadian areas are : VO1, VE2, VE7, VO2, VE3, VE8, N.W.T., VE1 N.B., VE4, VY YUKON, VE1 N.S., VE5, VE1, P.E.I,

VE6.

Final score: Total of QSO points times the total multipliers.

Contest entries and logging instructions: CQ WW RTTY DX logs
and forms should be used to facilitate scoring and checking.
All logs must:
1. Show times in UTC.
2. All sent and received exchanges are to be logged
(callsign, RST, Zone, Country, State/VE area, points claimed).
3. Indicate State/VE area, and country multiplier only the
first time it is worked on each band.
4. Use a separate log sheet for each band.
5. Have a list of stations QSOed on each band. (a
dupesheet.)
6. Have a multiplier check sheet for each band.
7. An overall SUMMARY SHEET showing total QSOs, points,
zones, countries, and State/VE areas worked.
8. Each entry must be accompanied by a signed declaration
that all contest rules and regulations for amateur radio in
the country of operation have been observed.

Contest forms are available from CQ, the RTTY Journal, and the
Contest Director. The RTTY Journals address is:
RTTY Journal
1904 Carolton Ln
Fallbrook, CA 92028

Please include a large SASE with 2 units of US first-class
postage or IRCs.

Awards: Plaques will be awarded to the first-place finishers
in each of the operator classes. Certificates will be awarded
to second and third. Certificates will be awarded to the
first-place finishers in each DX country.

Mail logs to:
Roy Gould, KT1N

IPS weekly report
----
17 September - 23 September 1993
Issue no.: 39

Date of issue: 24 September 1993

Date 17 18 19 20 21 22 23
10cm 85 85 84 80 80 79 78
A 04 03 04 14 11 08 (05 estimated)
T 33 37 41 38 17 25 29

Summary of activity

Solar activity was very low 19th-22nd September, and low for the remainder of the period.

The geomagnetic field at Learmonth (WA) was quiet 17th-19th, unsettled to active on 20th, quiet to unsettled 21st, then quiet 22nd and 23rd until 1234 UT when a sudden impulse measured at 22 nanoTeslars was detected, then unsettled to active thereafter.

Ionospheric F2 critical frequencies at Sydney were up to 30 per cent below predicted monthly values over the period. Spread F was present during local night on 22nd and 23rd Setember.

Forecast for the next week (24 - 30 September)

Solar : Low.

Geomagnetic: Active levels on 24 and 30 September, quiet to unsettled otherwise.

Ionospheric: Slight depressions for most of the week, especially on 24-25 September when 20 per cent depressions are expected.

>>using this method.

>Pardon my ignorance but can this really be called "white noise"?
>Stationary white noise can be loosely defined as noise with equal energy
>at all frequencies (ie. flat power spectrum).

In: S. W. Golomb, "Shift Register Sequences," 1967, Holden-Day, Inc.,
Library of Congress number 66-17667; no ISBN, also out of print
- but everyone who studied coding theory in the '60s and '70s
probably has a copy,

Golomb proved that PN (pseudo-noise) sequences have, among other
interesting properties, the property that the cyclic autocorrelation
is bilevel - R(0) has one value and R(t) has the _identical_
constant value for all t that are non-zero.

A quick hand-waving argument shows that this translates to a power
spectrum which is flat everywhere except at DC; the constant
R(t) contributes the DC component and the R(0)-R(t) spike at the
origin contributes the white spectrum term.

Strictly speaking, the output is, of course, not white, since it is
only white if you ignore the DC term. Since the DC term can be cancelled,
or filtered, out, that is probably picking a nit.

Yours, randomly,

Kok Chen, AA6TY kchen@apple.com

I got my first Bug Catcher many years ago. It is a great antenna!

Mine is mounted on a 54" mast (same length as the hustler fold over
mast) with about a 2 foot whip on top. It will tune 40 thru 10 meters.

Good luck with your mobile.

Super Morse gets my vote also... Highly recommend it, as it is much
more enjoyable to use and interact with than just listening to code
on the radio (which was usually much faster than I could copy, and I
had no idea if what I _was_ copying was correct!).

Now if I could just get past that damn 12wpm block that I seem to have!

Message-ID: <CE5Krx.BzA@mailer.cc.fsu.edu>
Source record: 275611

I will be in the market soon for a 30 amp (continous) power
supply. The major suppliers seem to be Astron, TrippLite and
Daiwa. Astron certainly seems to be sold on a wider retail basis
but I wonder if it is actually better than the others or if
the dealers simply have a better profit margin with it.
Can anyone out there give me any advice regarding these, or
any other, brands. Personal experience is helpful.
Oh yeah, the supply is for an ICOM 737 which I'll be ordering
at the same time as the pwr supply.

Hi,

I am looking for help/information, all assistance will be appreciated.

I shall soon be visiting Pakistan on business, and although I am not going to have much spare time to do radio, I would like to try and make contact with some of the local amateurs. To that end :-

1 Is there anyone in Pakistan who takes this mailing list who I could make contact with?

2 Any suggestions on how I might make contact prior to my getting there? I am going to get the national society's address and write to them, so that avenue is already taken care of.

I shall be visiting Karachi, Lahore, Islamabad and Peshawar during the period 25 November to 7 December.

Thanks

The way I learned -- actually, how I got my speed up -- was to listen to the code tapes on the way to work in the morning and on the way home in the evening. Since I had a 1 hr. commute (each way) back then, I had plenty of practice time. I got my speed up from a shaky 5wpm* to solid 15 wpm in about three weeks.

That's one way to make good use of time otherwise wasted.... :-)

*I'd learned Morse about 15 years ago in high school, even got a Novice ticket, but moved on to bigger (and not necessarily better) things until about 2 yrs ago when I got interested again. (ex-WB8YQM... I sure do get nasty callsigns, huh?)

>>
>> 2. Conceal the antenna.
>Interesting ploy...HOWEVER, since I HF mobile, hiding a Texas
>BugCatcher is NOT so easy, and clandestine is not possible!

I think HF is probably safer because the cops are much less likely to associate it with VHF/UHF FM communication equipment like theirs; it doesn't look or sound the same. So they are less likely to have a negative reaction because they won't connect it to someone "spying" on them (as with a scanner - which is where this discussion started).

>> 3. _Never_ have the radio turned on (RX or TX in use)
>I wear a boom mike with a headphone for hands-free (sorta -- I still
>have to PTT with a thumb switch) so *that* too is kinda obvious!

Headphone use by driver of vehicle is unlawful in many states. I'd like to use one when I operate HF on long trips, but my state forbids it.

My students all got their call signs in seven weeks.
As for the adds, it may have been done through the Callbook people. Whats the problem anyway, I enjoy the cat.s I get. It gives me an idea of how prices are going and what I can afford. Every Ham Shack needs a couple new pieces of equipment every year,
Right... :)

2995. Re: R-100 Comments Requested

Newsgroup: rec.radio.amateur.misc
Date: 1993-10-01 01:38:36 UTC
From: trapps@hpcc01.corp.hp.com
Message-ID: <31640023@hpcc01.corp.hp.com>
Source record: 275331

I bought an R-100 about a year and a half ago and have been pretty happy with it. I was debating between it and the comparable Kenwood, but chose the Icom because it had harder specs on the front end (I had heard the R-1 handheld was intermod prone). The rcvr seems pretty interferrence free (less than my HT certainly) and I can get pretty good SW reception off my discons (less sig probably helps there). My only wish was for an IF output or medium width IF fulter for APT satellites at 137 MHz.

I don't use the smart modes much, but during the LA riot I found it very easy to scan all FM NAR stations, with a certain set removed... The computer part seems easy to work with. The audio is good.

>>
>Huh?
>
>Have you looked at the DR, IMD, Intercept specifications lately?

These specifications often aren't relevant to how well a radio works in Europe. They might be if they were measured over a wide variety of tone spacings. But, for single spacing of 20 or 100 kHz, you really don't get the information you need to know. An amateur bands only receiver with filters will often outperform a general coverage receiver with better DR/IMD/Intercept numbers, simply because the wider RF filters let too much stuff through, despite the seemingly better IMD/DR/intercept numbers.

What happens is that while each broadcast station may contribute only a milliwatt or two, if you add a hundred of them up, and consider that at various instants some will add in phase, you can get a real overload problem. A filter that cuts reduces the number of these really makes a difference. The ideal solution is a tracking filter--preferably one that doesn't add to the distortion problem. Very expensive (45 kilobuck) receivers can do this.

How wide the local oscillator (phase noise) is really important if you want to operate next to a broadcast station's frequency. A bad oscillator will widen the bandwidth of received signals in a way that can't be filtered out with even the best IF filter.

(I'm assuming of course that someone wouldn't intentionally make their local oscillator noisy in a predictable manner).

With a good receiver, there will actually be gaps or clear spots between broadcast stations where you can work amateur stations.

Finally, there is the issue of 2nd order intercept points, in addition to the third order intercept. 2nd order distortion isn't a problem with good RF filtering, but may be worth looking at when evaluating wideband receivers.

Well, if it's software piracy they're worried about, that might not be
too far off the mark. My experience has been that many hams think
nothing about pirating software willy-nilly.

RYRYRY - GB2ATG - RYRYRYRYRY - BARTG - RYRYRYRYRY - GB2ATG - RYRYRY
This is the - British Amateur Radio Teledata Group - News Broadcast Service
for all Amateurs and Short Wave Listeners interested in RTTY Amtor and Pactor.

This news is broadcast during the first full week commencing Monday each
month, to the following schedule..

Evening transmissions at 1930 GMT. on 3.584 MHz. Mark.
RTTY on Monday-AFSK, Wednesday-AFSK, Friday-FSK and Saturday-AFSK.
Amtor-FEC on Tuesday and Thursday.
Morning transmission at 1000 GMT. on 7.041 MHz. Mark.
RTTY on Sunday-AFSK.
Stated frequencies could be plus or minus for QRM.

An edited version of this bulletin is available on the Packet network as a
BARTG @ GBR. file thanks to: Andy G3ZYP @ GB7BBS. 28.GBR.EU. It is also posted
on the "INTERNET" system via the INFO-HAMS list on UCSD.EDU. thanks to Iain
(G6ARO) who is available on the "JANET" network as Iain @ HUMBER.AC.UK

News for October 1993. Bulletin No. 010. (all times are GMT).

BARTG Information.
The 1993 Annual General Meeting of the British Amateur radio Teledata Group
will be held on Sunday 13th November 1993 at the Green (wine bar and
restaurant.) The Green, Mere Green Road, Four Oaks, Sutton Coldfield,
commencing at 2 pm. This is the same venue used for the 1992 AGM which proved
to be a popular location for many members. Lunch and other refreshments are
available. Coffee and biscuits will be served during an interval in the
proceedings. All members are welcome. The venue is well served by road and rail
and full directions will be published in the Autumn issue of Datacom. Those
intending to attend are advised to contact the group secretary Ian Brothwell
(G4EAN) QTHR, or by phone on 0602 262360 or to G4EAN @ GB7BAD. 23.GBR.EU. to
ensure everyone is provided a copy of the minutes, something to sit on and a
cup of coffee.

RTTY DX Activity.
14 MHz.
SV2ASP/A 0530, KH6AAC, EA6VS and 7Z2AB 0700, KL7JAF 0800, TK/DL8NBH 1030,
HL9KU 1130, XX9AS 1230, UJ8JCQ 1330, UP5A 1400, JT1CS and XU3DWC 1430, YB5QZ
and 9M2RS 1530, A45XC and VR2GO 1630, Z32JA 1700, VU2SJV 1800, ZS1WP and
YI1AL/2 1900, T91AAS 1930, PJ2MW 2030.
21 MHZ.
ZC4ST 1230, TK/DL8NBH 1530, Z32JA 1700, 7Z2AB 1930,

14 MHz ARQ.
VQ9CE 1430.

QSL Information.
7Z2AB via AA0BC. XU3DWC via PA0RYS. UP5A via RL7AE. HL9KU VIA N7NMR. or via the HL9 buro.

Contests.
The WAEDC European RTTY DX Contest starts at 1200 GMT Saturday November 12 until 2400 GMT Sunday 13.
All 5 HF bands 3.5-7-14-21-28 MHZ.
Classifications are:
A) Single operator all band.
B) Multi operator single transmitter.
C) Multi operator multi transmitter.
D) Short Wave Listener. (special regulations).
Rest periods.
Of the 36 hours contest period only 30 hours of operating time is permitted for single operators. The 6 hours of rest may be taken in one but not more that three periods at any time during the contest.
Exchange message.
All stations exchange RST plus a progressive three digit serial number starting with 001. Multi-multi stations issue serial numbers by band.
Multiplier points.
One (1) point for each DXCC country worked on each band.
Multiplier bonus points.
The multipliers on 3.5 MHz may be multiplied by four (4).
The multipliers on 7 MHz may be multiplied by three (3).
The multipliers on 14/21/28 MHz may be multiplied by two (2).
QTC traffic.
Additional point credit can be claimed by reporting a QTC. i.e. Data of a QSO between a none European and a European station earlier in the contest. A QTC contains the time, call sign and QSO number of the station being reported.
QTC: 1307/DA1AA/431 means you worked DA1AA at 1307 GMT and received his serial number 431. A QSO may be reported only once and not back to the originating station.
A maximum of ten (10) QTC's can be sent to the same station which can be worked several times to complete this quota but only the original contact has QSO points value. The sum of QTC's exchanged between two stations (sent plus received) must not exceed ten (10).
QTC traffic is not allowed within one's own continent.
Keep a uniform list of QTC's sent. QTC 3/7 indicates that this is the third series and that seven (7) QSO's are now being sent.
Scoring:
The final score is computed by multiplying the sum of the total number of QSO's and QTC's by the sum of multipliers from all bands.
Special regulations for Short Wave Listeners:
The same call sign - European or non-European - may only be logged once per band. The log must contain both call signs and at least one on the control numbers. Each station logged counts one (1) point.
Each complete QTC (max ten (10) per station) one (1) point.
Multipliers are determined by the DXCC and WAE country lists.

Note: It is possible to claim up to two (2) multipliers in one logged contact.
(Ed. I wish you good luck sorting that lot out).
Deadline for log entries is December 19th 1993 to:
WAEDC Contest Committee. P.O.Box 1328, D-8950 Kaufbeuren, Germany.

Notes of interest.
UP5A was active until September 28 from the Karaghiye Depression, "Black Jaws Canyon" 132 metres below sea level near Aktau.

Thanks this month to:
G3ZYP, G3MWH, DXNS, RSGB, VK2SG/RTDX, ARRL/ARLD AND OPDX/BARF80.

Copy of the news as distributed by G0ARF 930928.

BARTG caters for all DATA interests with information-components-kits -ready built units and software from experts. Members receive a 120 page quarterly journal devoted to data modes. Beginners guides for most data modes are available. The group sponsors HF and VHF RTTY contests, administers its own DX and members award scheme and runs an annual rally.

This copy of BARTG News is posted by Iain Kendall (G6ARO) who can be contacted via Internet e-mail at.. iain@humber.ac.uk Items for inclusion in the broadcast may also be mailed to this address, as well as any queries regarding membership or services offered by BARTG.

>I need to know if a TNC Program will run in a IBM PC Jr with a 8088
>processer.
Yes. You can actually run any standard terminal or packet program if you have
enough memory installed.
> Also if a VGA monitor can be used on it instead ofa CGA
>if a board or what ever is changed.
The CGA is built-in to the motherboard. I don't think you can disable it but I
haven't used a PC Jr in 5 years or so, you can check for PC Jr supplers in
Computer Shopper.

: devices might, no matter how small the chance, interfere with navigation,
: then I am very glad that he would say something.
:
: Jeff NH6IL (ex: WA6QIJ et al)

You are not wrong...and it's more than that, too.

Using a transmitter....even many receivers (the local oscillator, is why)
inside an aeroplane, you are right next to the antenna system...the body of
the craft is part of the system.

Someone sending, or even receiving, will screw up the navigation gear,
(which relies heavily on radio), plus the collision avoidance systems.

The piolets job is to fly the plane and be the ultimate person who has
final say on what goes on in a plane....not answer questions of that sort.

If he had really wanted some answers, he should have gone to the info desk
and find who to speak to about that.....he'd get more or less what I just
said.

Rules are there for a reason! They are not there just to harrass people...
it's just that they don't want to have to explain every little detail
to everyone who asks....those people are EXPECTED to go look up the
reasons on their own.

Now...with net access's, a person can find out ALL KINDS of stuff!

They have NO excuse now to not know.

How would the VEC know? You could easily take an exam from another VEC. The only way they know is if you check the box on the 610 or if you still have an upgrade in process from the same VEC they probably have it on record. Seems to me it would be easy to do. I don't know WHY one would want to mess around with the system, though...all it would accomplish is to delay things.

Historically, Hamvention has always been Friday, Saturday,
and Sunday of the last weekend of April. Next year I believe
it will be on April 29-May 1 1994. That could be subject to
change, though.

The word was circulating around the show that the program was in
error about the 94 dates. The word was that Hara was available for
the week previous instead of the one listed in the program. I even
heard that on the PA so I suspect it's more than rumor.
